ORDINANCE 2025-15

AN ORDINANCE ENACTING SECTION 14-8-1 OF THE PARK CITY CODE, ADOPTING REVISED ENGINEERING STANDARDS AND SPECIFICATIONS

WHEREAS, the City Council of Park City last adopted the American Public Works Association Utah Chapter standard plans and specifications and Park City Supplemental Standard Plans and Specifications ("Standards") in April 2024 (Resolution 02-2024); and

WHEREAS, the Standards have and will continue to be updated periodically as new technology, policy changes, procedure changes, updated methods of design and construction are implemented, and infrastructure materials change; and

WHEREAS, in coordination with City Staff, the City Engineer prepared and recommends revisions to the Standards; and

WHEREAS, the Planning Commission held a public hearing on May 14, 2025, regarding updates to the Standards and recommends the City Council approve the same; and

WHEREAS, the City Council finds good cause for adopting the revised Standards and modifying the ordinance language to allow future revisions to the Standards to be adopted by resolution;

NOW, THEREFORE, BE IT ORDAINED by the City Council of Park City, Utah:

Section 1. Section enacted. Title 14, Chapter 8, Section 1 of the Park City Code is hereby enacted to read:

> **14-8-1: DEVELOPMENT, DESIGN, AND CONSTRUCTION STANDARDS ADOPTED:**
> All persons developing, designing, constructing, reconstructing, building, or rebuilding on property located in Park City shall comply with the guidelines contained in the current versions of the American Public Works Association Utah Chapter Manual of Standard Specifications and Manual of Standard Plans and the Park City Supplemental Standard Plans and Specifications at the time of permit issuance.

Section 2. Document Attached. The "Park City Supplemental Standard Plans and Specifications," together with its appendices, is hereby attached as **Exhibit A**.

Section 3. General Repealer. Ordinances in conflict with this ordinance are hereby repealed to the extent of such conflict.

Section 4. Effective Date. This ordinance shall become effective upon publication.

PASSED AND ADOPTED this 12th day of June, 2025.

DIVISION 100 ADMINISTRATIVE & GENERAL REQUIREMENTS

100.01 Introduction to Park City Engineering Standards

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Explanation of adopted engineering standard plans and specifications for construction improvements occurring within Park City right-of-way or properties. Park City Engineering Standards includes the most current versions of the:

Park City Supplemental Standard Plans and Specifications (SSPS)
American Public Works Association Utah Chapter Manuals of Standard Plans and Specifications (UAPWA)

1.2 STANDARDS EXPLAINED

A. Park City Municipal Corporation (PCMC) has adopted the most current versions of the UAPWA Manuals of Standard Plans and Standard Specifications, including approved amendments.

B. These SSPS are intended to provide supplemental information to the most current version of the UAPWA.

C. The Utah Manual of Uniform Traffic Control Devices (MUTCD) is adopted in its current edition at the time of permit approval.

D. Technical Specifications produced by industrial or trade associations that are referred to in this document (ASTM, AASHTO, ANSI, etc.) are adopted as their most current version. Upon approval by the City Engineer or Designee, these Technical Specifications may be modified or deleted by appropriate notes identified on Approved Drawings.

E. Drawings and specifications must additionally conform to Park City Municipal Code which can be found at the following link: https://parkcity.municipalcodeonline.com/book?type=ordinances#name=Preface

F. For standard specifications and drawings for sanitary sewer systems, Park City defers to Snyderville Basin Water Reclamation District (SBWRD). All sewer design and construction shall conform to the latest SBWRD requirements which can be found at: https://www.sbwrd.org/standards-and-specifications/

G. Park City Water has developed standards different from the APWA that have been accepted by the Utah Division of Drinking Water. All Water system design and construction shall conform to Park City Water Standards contained herein.

H. All public improvements constructed in the Park City's right-of-way, on Park City property, or facilities intended to be operated or maintained at any time by Park City are required to comply with these standards. Engineering standards are also applicable to private development site design, and all new development and redevelopment projects are required to adhere to these standards.

I. Design Exceptions (DE) to specific standards must be approved in writing by the City Engineer or Designee. A request for a DE must be submitted to the City Engineer's Office. It will include documentation explaining why the standard cannot be reasonably met and thus justification for exception as well as the proposed modification. No exceptions will be granted that have a negative impact on public health, safety, or welfare. Examples of justification for approval include the following:

- The cost to obtain the standard significantly exceeds the expected benefit.
- Required work to meet the standard is outside the scope of the project or could be better addressed by a future project.
- Topography or other geographic conditions impose an undue hardship that cannot otherwise be mitigated.

Plan approval by the City Engineer or Designee does not grant or imply a waiver from standards unless noted explicitly by the City Engineer or Designee at the time of approval. Approval of a DE by the City Engineer or Designee can only be approved for work occurring within PCMC right-of-way. The City Engineer or Designee cannot approve a DE that occurs within the jurisdiction of another agency.

PART 3 EXECUTION Not Used

END OF SECTION

100.02 Standards for Construction

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Park City Engineering has adopted the 2017 edition of the UAPWA Manual of Standard Plans and Manual of Standard Specifications, with the following exceptions.

1.2 APWA STANDARD DRAWING EXCEPTIONS

A. Drawing exceptions:

205.1	Only type A curb is allowed
205.2	Only type G curb is allowed
238	Detectable warning surface –
	Type P – Allowable on Main St and within Historic District
	Type R – Not Allowed
	Type T – Allowable everywhere: Material shall be Cast Iron

B. Delete the following standard details, which are not permitted within Park City:

205.3	Curb and Gutter Type HB30-7
209	Curbs
213	Waterway Transition Structure
216	Mountable Curb Driveway Approach
221.1	Flare Driveway Approach Type A
221.2	Flare Driveway Approach Type B
222	Saw-Cut Driveway Approach
225	Open Driveway Approach
229.1	Bridge Driveway Approach
229.2	Bridge Driveway Approach Tie In
232.1	Patterned Concrete Park Strip
232.2	Patterned Concrete Crosswalk
238	Detectable warning surface – Type R
241	Parking Meter Post
292	Street Name Signpost
303	44” Frame and Cover for Cleanout box type A
304	48” Cover and Frame
305.1	51” Cover
305.2	51” Frame A
305.3	51” Frame B, C, D
309.1	47 ¾” Vane Grate and Frame
310	48” Grate and Frame
320	Debris Grate Inlet
321.2	Backflow preventer Pinch valve
322	Curb Face Outlet box
331.2	Cleanout box Type B
331.3	Cleanout Box Type C
332	Precast box
335	Adjust reinforced concrete deck to grade
341.2	Pipe pass through base
360.2	Raise frame to grade—plastic form
372	Area drain
Part 4	All Sanitary Sewer requirements
Part 5	All Culinary Water requirements

C. Amend the following standard drawings:

231	Sidewalk – Add Wire Mesh as per 231 Sidewalk below

315.1 Single Grate – Use bicycle safe grate and frame (STD. DWG. 309.2)
315.2 Double Grate – Use bicycle safe grate and frame (STD. DWG. 309.2)
341.1 Precast Manhole – Add 12" of sediment storage as shown in APWA Standard Drawing – Plan 316 Combination catch basin and cleanout box

D. Add the following guide as standard drawing:
881 Park City Stair Standards

1.3 APWA STANDARD SPECIFICATION EXCEPTIONS

A. Park City has adopted APWA 32 12 05. The standard asphalt mix design, unless approved otherwise, shall be per section 1.1.A.4(3) Roadway Structural Section.

B. Delete the following sections in their entirety:
33 01 00 Water Distribution and Transmission
33 11 11 Relocate Water Meters and Fire Hydrants
33 12 16 Water Valves
33 12 19 Hydrants
33 12 33 Water Meter
33 13 00 Disinfection
33 16 13 Water Tank
33 1 00 Sanitary Sewerage Systems

PART 2 PRODUCTS Not Used

PART 3 EXECUTION Not Used

END OF SECTION

100.03 GENERAL IMPROVEMENT REQUIREMENTS & DESIGN GUIDELINES

PART 1 GENERAL

1.1 SECTION INCLUDES

Requirements for one-year warranty period, road-cut restrictions, improvement requirements, and general design guidelines related to roadway/construction improvements.

A. **One-Year Warranty Period**:

If within one year after completion any work is found to be defective, the contractor or developer shall promptly, without cost to the City, either correct such defective work or remove it from the site and replace it with non-defective work. If the contractor or developer do not promptly comply, or in an emergency where delay would cause serious risk of loss, injury or damage, the City may have the defective work corrected or the rejected work removed and replaced, and all direct and indirect costs of such removal and replacement, including compensation for additional professional services, shall be collected by the City in the manner most convenient to the City from the developer and contractor. Whatever sharing of cost may be agreed upon between the developer and contractor is strictly a private matter between the developer and the contractor.

B. **Road-Cut Requirements and Restrictions:**

Any cuts shall be performed with a saw or pneumatic tool to provide a straight, neat construction line. Cuts and edges of pavement patches must not be longitudinally aligned within the wheel path of the travel way. All cuts will require a repair in accordance with APWA Section 255 – Bituminous pavement T-patch. These conditions will be met unless otherwise approved by the City Engineer or Designee.

Any street cuts, asphalt paving or street patching operations shall only occur between April 15th and October 15th; when the surface temperature, upon which asphalt paving is to be placed, is at least fifty (50) degrees F and when the wind chill factor has not fallen below thirty (30) degrees F, unless otherwise approved by the City Engineer or Designee.

Between October 15th and April 15th, non-essential street cuts, asphalt paving, and street patching operations shall only be permitted by written authorization from the City Engineer or Designee and then only when conditions established by a proper review indicate that such placements are in the best interest of the City and the public. These conditions may include but are not limited to anticipated weather conditions showing temperatures above thirty-two (32) degrees F for the day of placement and an additional three (3) days after placement, no snow being predicted within this same time period, the anticipated project schedule being of minimal imposition, and good cause for the requirement of work during the time period of road cut prohibition rather than the work occurring after April 15.

Any asphalt placed after October 15 and before April 15 will be considered temporary, to be replaced under suitable conditions in accordance with APWA Section 255 – Bituminous pavement T-patch unless otherwise approved by the City Engineer or Designee.

Newly built roads, or roads which have been reconstructed, repaved, or overlaid shall not be cut into within three years of construction unless granted an exception by the City Engineer or Designee. Roads which have been slurry-sealed shall not be cut into within one year of placement unless granted an exception by the City Engineer or Designee. Any cut which has

been granted an exception will require a repair in accordance with APWA Section 255 – Bituminous pavement T-patch that spans the full width of the road to be paid for by the owner/contractor.

Essential road cuts are defined as road cuts required for emergency repairs to infrastructure and utilities which, if left untouched, have the potential to cause significant property damage or risk to safety.

C. **Concrete Cuts:**

Cuts through concrete (e.g. sidewalk, curb and gutter, rolled gutter) require full panel replacement. Concrete section must be replaced from joint to joint. No partial section replacements will be allowable unless by approval by the City Engineer or Designee.

D. **Required Improvements:**

The following improvements are required unless waived by the City Engineer or Designee on the basis of site conditions which make these improvements unnecessary. The design of the improvements will vary depending on site conditions but should be in alignment with Park City's Adopted Transportation Plans, and other similar planning documents adopted by the City that may cover the site or adjoining public properties. Unless otherwise stipulated all improvements shall be designed and built to the standards as adopted in this document, as required per the Park City Municipal Code and as required by other generally-accepted engineering standards.

1. Curb and gutter, culverts, inlet boxes, and other drainage improvements reasonably necessary to provide proper drainage in accordance with good engineering practices and the Park City Master Storm Drainage Plan.

2. Proper grading and drainage in conformance with Park City Municipal code Section 13-5-3 Long-Term Strom Water Management.

3. Wherever possible open channels shall be preserved for all major drainages shown on the Master Storm Drainage Plan. Culverting of these channels is not allowed unless approved by the City Engineer and Public Utilities Director or their designees. Landscaping and revegetation to stabilize soils may be required.

4. All roads shall be constructed of an all-weather surface such as asphalt or concrete. Pavements shall be designed on a site-specific basis by a registered professional civil engineer. Refer to Division 200.01.1.2.B Roadway Structural Section of these Supplemental Specifications and Division 32 Exterior Improvements of the most current UAPWA Specifications for all pavement design and construction requirements.

5. Both public and private streets shall be built in accordance with all provisions in this and other adopted Park City Code Documents. Streets should be designed using cross-sections shown in the Park City Municipal Library of Recommended Roadway Cross Sections. Due to right-of-way dimensional constraints within the City the recommended cross sections may not be applicable to all projects. If project constraints make the preapproved cross-sections infeasible, the City Engineer or Designee may grant exceptions on a case-by-case basis.

6. Projects which would create an unreasonable traffic impact, either for construction or for permanent access, whether by vehicles, bicycles, or pedestrians on any City street shall be required to structurally and/or geometrically improve those streets in a manner as determined by the City Engineer or Designee. These improvements will be required such that the improved street is structurally and geometrically capable of carrying both the temporary and permanent increases in traffic when analyzed by generally accepted engineering methods.

7. A study of geological hazards by a geologist or soils engineer may be required to be submitted for all sites unless City Staff specifically omits the requirement. Cuts and fills on each site shall be balanced to minimize hauling.

8. If a site is adjacent to a street identified within the Streets Master Plan as requiring additional right-of-way, the site may be required to dedicate right-of-way for public streets in accordance with the Streets Master Plan.

9. Sidewalks and/or pedestrian pathways, including all necessary ADA improvements, may be required to be installed in accordance with Park City's Adopted Transportation Plans or as required to serve the proposed project.

10. Trails may be required to be installed. If so, they shall be installed in accordance with the most current version of the Park City Trails Master Plan. Trails shall be constructed to meet the International Mountain Biking Association guidelines. Should a development establish trails, trail easements shall be dedicated on the plat and recorded with Summit County. Easements shall be established as listed:

a. Typical backcountry trail easements require a minimum of 10’ in width and may require a professional trail designer to locate the trail appropriately in terms of grades and topography.
b. Neighborhood Trail easements may vary depending on the intent but typically range from 10-25’ in width and should provide efficient and logical connections within and through a development.
c. Multi-use pathway easements typically require a minimum of 20’ in width and should provide efficient and logical connections to existing facilities or destinations.

11. Streetlights, street signs, and traffic signs and markers. Operation and maintenance of streetlights is a City responsibility only when the light is at the intersection of two City streets. Street name signs shall be in accordance with Standard Drawings 239.1 and 293.2. Traffic signs and traffic markers (including but not limited to stop signs and pavement striping) shall be in accordance with the latest edition of the Manual on Uniform Traffic Control Devices (MUTCD). Streetlights shall be in accordance with UAPWA standards and specifications.

12. Fire hydrants are required at 500-foot intervals measured along public ways or walks or drives which are to be snow-plowed. All water mains serving a hydrant shall be a

minimum of eight-inch diameter. Each hydrant shall have an auxiliary gate valve located flanged to the tee on the water main.

13. All products and materials for public utilities shall be “MADE IN THE USA”. Steel and iron material products such as pipe, fittings, valves, manhole, meter vault, inlet box and valve box castings shall be “MELTED & MANUFACTURED IN THE USA”. If an item is not possible to source “MADE IN THE USA”, the developer/contractor may apply for an exception from the City Engineer or Designee with proof that a reasonable sourcing effort was made to comply with the “MADE IN THE USA” requirement.

14. A metallic tracer wire and high-visibility utility warning tape shall be placed over all underground utility lines.

15. All utilities and meter locations must be shown on submitted plans, including water and sewer laterals, power and phone cables, gas lines, and cable TV. Whenever a proposed project will alter, extend, or abandon sanitary sewer mains, all sewer construction shall be done according to standards established by Snyderville Basin Water Reclamation District (S.B.W.R.D.).

16. Sewer improvements as required by the S.B.W.R.D., including excess capacity as agreed upon between S.B.W.R.D. and the developer. Backfill over sewer lines in City streets or on City property shall be in accordance with these Specifications.

17. All connections to the City water system shall be inspected and metered unless otherwise approved by the City Engineer and Public Utilities Director or their Designees. All connections 4 inches in diameter or larger shall also be provided with a valve at the tee or property line and in other locations subject to the approval of the City Engineer and Public Works Director or their Designees. All connections, piping, and appurtenances on the consumer's side of the water meter or beyond a point 5 feet outside of the public right-of-way are to be owned and maintained privately, not by Park City, unless the infrastructure is dedicated to and accepted by the City. Any large addition to the water system, such as a new condominium project or subdivision, may also be required to install a master meter.

18. Infrastructure including, but not limited to, utility piping, poles, equipment, etc. that has been abandoned should be removed upon abandonment unless otherwise approved by the City Engineer or Designee.

19. A letter from each appropriate impacted utility company approving all utilities, including modification or protection but not limited to water and sewer laterals, power and phone cables, gas lines and cable TV can be required by the City Engineer or Designee prior to Park City approval. All utilities shall be placed underground unless otherwise approved by the City Engineer or Designee.

20. Water system improvements necessary to keep Park City's water storage and distribution system fully in accordance with recommendations from the Insurance

Services Office and Utah State Board of Health regulations. Improvements required include but are not limited to: reservoirs and appurtenances, including excess capacity as need to provide efficient long-term system operation, pressure reducing stations, pump stations, valves, air release valve vaults, meter vaults, water distribution lines, telemetry, and computer modeling by Park City or the consulting engineer of the City's choice as necessary to determine the impacts of a proposed development on the City water system. The City Engineer or Designee may require manhole-size valve vaults as per Std. Dwg. 709 at any valve. A completely-detailed design of each pump house will be required; scope of review includes but is not limited to exterior design and safety issues such as kill switches, ground faulting, and panel locations (2 feet off floor minimum). Pumps and motors shall have a minimum of 75% wire-to-water efficiency unless otherwise approved by City Engineer and Public Works Director or their Designees. To simplify parts inventories, water systems equipment manufacturers shall be as follows: pumps shall be manufactured by Aurora; motors by U.S. Electrical Motor; starters by Dayton; boxes and panels by Square D; chlorinators by Fischer and Porter; pump control valves by Cla-Val.

21. Locate transformers and pedestals outside of the right-of-way and within public utility easements. If the facilities cannot be located outside of the right-of-way shield may be required

22. Any staging area must be identified if requested by the City Engineer or Designee. Site survey information including detailed horizontal and vertical information relating to existing and future items may be required by the City Engineer or Designee.

23. Bus shelters, with an estimated value of $6,000.00 each, are required for major developments along bus routes. If a bus shelter is provided, the developer's architect is required to use logos and signage in the design of the shelter but is encouraged to incorporate project design themes and features into the design of the shelter.

24. Snow storage sites and snow storage easements adequate to serve all plowed spaces within and adjacent to the developments. Snow which could be shed from roofs shall be adequately accommodated to eliminate the possibility of snow and ice falling on access ways to buildings.

25. Permanent survey controls such as brass cap measurements shall be set by a licensed professional land surveyor for all new developments.

26. As-built record drawings showing the as-built location of all public improvements. All subsurface improvements shall be tied to permanent surface improvements (e.g. survey monuments).

END OF SECTION

DIVISION 200 STREETS

200.01 Roadway Standards

PART 1 GENERAL

1.1 GENERAL ROAD DESIGN STANDARDS

These standards shall be applicable to all developments/construction in Park City:

A. **Roadway Design**

1.1.A.1 Roadway Cross Slopes

The purpose of sloping on roadway cross sections is to provide a mechanism to direct water off the traveled way.

1. The standard cross slope to be used for new construction on a traveled way for all types of surfaces **shall be 2 percent**.

2. For resurfacing or widening (only when necessary to match existing cross slope), the minimum **shall be 1.5 percent and the maximum shall be 3 percent**.

3. On unpaved roadway surfaces, including gravel and penetration treated earth the cross slope **shall be 2.5 percent to 5.0 percent**.

1.1.A.2 Roadway Grade Requirements

1. Roadway **shall have a maximum grade of 10%**. Segments less than 250 ft. in length with a maximum grade of 12.5% may be acceptable with City Engineer or Designee and Fire Marshall approval.

1.1.A.3 Roadway Element Width Requirements

1. All roadway design elements shall have minimum widths in compliance with the following table.

TRANSPORTATION ELEMENT	PARK CITY STANDARD MINIMUM WIDTH [FT]	*MINIMUM WIDTH [FT]* *(ONLY APPLICABLE WITH CITY ENGINEER'S APPROVAL)*
Roadways		
Shoulder	4	*2*
Transit Shoulder	12	*10*
Parking Shoulder	9	*7*
Lane (Speed Limit <30MPH)	11	*10*
Transit Lane	12	*12*
On-Street Buffer between Travel Lane and Bike Lane	4	*4*
Bicycle Lane	5	*4*
Pedestrian Ways		
Sidewalk	6	*4*
Multi-Use Path	12	*10*
Back Country Trail	4	*2*
Natural Surface Pathway	10	*10*

2. Full roadway design sections shall be in conformance with all adopted code standards.

1.1.A.4 Roadway Structural Section

1. Table 1 below is minimum allowed material thicknesses for the various roadway geometric cross sections. The actual structural section shall be based on the volume of traffic and site specific soils engineering recommendations that shall be provided to the City Engineer's office for review and approval prior to permit issuance.

2. All curb, gutter, and sidewalk shall be concrete and installed per adopted APWA Standard Plans Part 2 – Roadway.

Table 1. Minimum Roadway Structural Section Requirements

Roadway Section	Minimum Asphalt Thickness (in)	Minimum Commercial Roadbase Thickness (in)	Minimum CBR
Local Road - Non-old Town	4	9	70
Local Road - Old Town	4	9	70
Minor Residential Collector	4	9	70
Major Residential Collector	4	9	70
Commercial Collector	5	10	70
Non-UDOT Arterial	5	10	70
UDOT Arterial	4	9	70

3. Park City has adopted APWA 32 12 05. The standard asphalt mix design, unless approved otherwise, shall be a 3/8" maximum nominal aggregate size Superpave mix with PG 58-28 / 50Nd or other approved binder grade with a 15% maximum RAP content. The Public Works Director or Designee may approve alternates.

B. **Construction Season**

See 100.03 General Improvement Requirements and Design Guidelines Section 1.1-B Road-Cut Restrictions.

Any street cuts, asphalt paving or street patching operations shall only occur between April 15th and October 15th; when the surface temperature, upon which asphalt concrete is to be placed, is at least fifty (50) degrees F and/or when the wind chill factor has not fallen below thirty (30) degrees F, unless otherwise approved by the City Engineer or Designee.

C. **Traffic Control**

All construction activities shall minimize obstruction of vehicular, bicycle, or pedestrian traffic and prevent damage to completed work. In this regard, the Permitee shall keep the proper City Authorities continuously informed as to the location(s) of these operations.

Should construction activities partially or wholly obstruct a lane of travel (e.g. if traffic is unable to pass the work zone without entering the opposing lane of traffic) or will obstruct a sidewalk, it is required to obtain a Permit for a Closure of City Streets or Closure of City Sidewalks through the City Engineer's office prior to beginning the work. The application for

the permit shall include a traffic control plan that conforms to the Utah Manual of Uniform Traffic Control Devices (MUTCD)

Contact the City Engineer's office to apply for a Permit for authorization of Closure of City Streets or City Sidewalks.

In order that the effect to both the flow of traffic and damage to the new work is minimized, the permitee shall, at all times, provide approved traffic control measures (e.g. barricades, lights, flaggers and other traffic control devices) in accordance with their approved, MUTCD conforming traffic control plan and permit for closure of city streets/sidewalks and as may be required by law. All barricades needed overnight shall be lit in accordance with MUTCD.

All necessary personnel and/or devices, including any additional as directed by the City Engineer's office, shall be provided solely at the permittee's expense.

No City street or road shall be closed to vehicular traffic without first obtaining a Road Closure Permit from the City Engineer's office and prior notification to affected emergency response authorities. If a road is closed without a Permit, the Contractor shall pay a fee in accordance with the Park City Municipal Code Fee Schedule Section 1.3.4 Road Closure Permit.

D. **Right of Way: Grades Behind Gutter/Edge of Asphalt**

When landscaping or excavating on City property or the City Right-Of-Way, the following conditions shall apply:

a. The change in grade within the first five (5) feet behind the back of curb (BOC), or edge of asphalt (if there is no curb or gutter), shall not exceed six (6) inches plus or minus from the BOC grade elevation. The change in grade between five (5) feet and ten (10) feet behind the BOC, or edge of asphalt (if there is no curb or gutter), shall not exceed three (3) feet plus or minus from the BOC grade elevation.

b. Approval from City Officials is required prior to doing work on City Property. A permit may be required. Contact the City Engineer's Office for Permit requirements and/or Approval.

E. **Snowmelt Systems**

Surface runoff originating from snowmelt systems shall meet all criteria set forth in Section 13-5 Regulation And Enforcement of Storm Water Discharges Associated With Post-Construction Activities. Portions of snowmelt systems located over utility easements require a separate mechanical zone. Additionally, the utility provider may require a permanent utility encroachment that includes indemnification for the utility provider.

Proposed snowmelt systems located on a public right-of-way require Engineering Department approval. All snowmelt systems within or adjacent to the City Right-of-Way shall not drain to an unheated portion of sidewalk, hardscape, or roadway. All snowmelt systems in the ROW require a Work in the Right of Way permit and recordation of a permanent encroachment agreement. Additionally, these systems will need to have a separate mechanical zone for the ROW. If the City or associated utility provider needs to improve the ROW or access subsurface utilities, and the associated construction requires removal of a snowmelt system, then the

property owner will be responsible for the replacement/ restoration of the system.

F. **Plates (Steel/Rubber) Placed at Driveway Entrances**

Steel plates or rubber inserts (both hereby known as "driveway plates") placed at the bottom of driveways are not allowed. During new construction, driveway plates are prohibited to be installed. If a building permit is issued for work on an existing property that has an existing driveway plate, the driveway plate shall be removed prior to the final inspection.

Driveway plates can become hazardous projectiles if caught by snowplows and they can damage private property and public infrastructure and equipment. They can collect or stop debris creating street sweeping difficulties. The rubber inserts often obstruct the flow of storm water preventing proper system functionality.

If a driveway plate is thought to be necessary at a given location, an applicant may apply for City Engineer's or Designee's authorization of the driveway plate. If the City Engineer or Designee deems the driveway plate necessary and authorizes the driveway plate, the applicant must record an Encroachment Agreement for the placement (or continued presence) of a driveway plate in the City's right-of-way.

G. **Crosswalks**

Crosswalks shall be installed per MUTCD Section 3C.03, but must, at a minimum, include the following improvements for visibility unless otherwise approved by the City Engineer or Designee:

- Ladder Striping per MUTCD Section 3C.07.
    - Exceptions:
        - If the crosswalk is within the school zone it should be marked with Longitudinal Bar Striping per MUTCD Section 3C.06.
        - Artistic crosswalk striping composed of repeating patterns may be accepted by the City Engineer or Designee for significant locations.
- MUTCD Compliant Pedestrian Crosswalk Signage
- ADA Compliant Ramps including Cast-Iron Tactile Warning Surfaces

H. **Speed bumps or speed humps**

The placement of speed bumps or humps in the City roadway rights of way require approval by the City Engineer and are not recommended, in general, for placement within City roadway rights of way. They pose problems for snow removal. Thus, for safety and liability reasons these facilities require special approval by the City Engineer prior to their installation. The City recommends that other traffic calming measures be considered before the placement of speed bumps/humps.

Sidewalk

1. GENERAL

A. Variance from specified dimensions and slopes must be acceptable to the ENGINEER. System configuration may be changed at ENGINEER's discretion.

B. Additional requirements are specified in APWA Section 32 16 13.

2. PRODUCTS

A. Base Course: Untreated base course, APWA Section 32 11 23. Do not use gravel as a base course without ENGINEER's permission.

B. Expansion Joint Filler: 1/2-inch thick type F1 full depth, APWA Section 32 13 73.

C. Concrete: Class 4000, APWA Section 03 30 04. If necessary, provide concrete that achieves design strength in less than 7 days. Use caution; however, as concrete crazing (spider cracks) may develop if air temperature exceeds 90 degrees F.

D. Concrete Curing Agent: Clear membrane forming compound with fugitive dye (Type ID Class A), APWA Section 03 39 00.

E. Reinforcement: Welded Wire Reinforcement 6x6 minimum W2.9xW2.9 or approved equal.

3. EXECUTION

A. Base Course Placement: APWA Section 32 05 10. Maximum lift thickness before compaction is 8-inches when using riding equipment or 6-inches when using hand held equipment. Compaction is 95 percent or greater relative to a modified proctor density, APWA Section 31 23 26.

B. Concrete Placement: APWA Section 03 30 10.

1) Install expansion joints vertical, full depth, with top of filler set flush with concrete surface.

2) Install contraction joints vertical, 1/8-inch wide or 1/4 slab thickness if the slab is greater than 8-inches thick. Maximum length to width ratio for non-square panels is 1.5 to 1. Maximum panel length (in feet) is 1.5 times the slab thickness (in inches).

3) Provide 1/2-inch radius edges. Apply a broom finish. Apply a curing agent.

C. Reinforcement Placement: Ensure reinforcement is placed with minimum 2" concrete cover.

296.01 Street Lighting Product Specifications

PART 1 GENERAL

1.1 SECTION INCLUDES

A. K828 Moderne Sr. – LED or approved equal product specifications.

PART 2 PRODUCTS

2.1 PRODUCT SPECIFICATIONS

A. LED ENGINE
   1. Light engine shall include an array of 60 or 84 solid state Cree X-Series high power LEDs (light emitting diodes). The emitters shall be mounted to a metal core circuit board using SMT technology. The LEDs and circuit boards shall then be mounted to a high-performance heat sink which is vented to the outside ambient air to provide dynamic airflow for cooling the system.

B. OPTICS
   1. External light control shall consist of high precision refractive lenses mounted above the LED emitter arrays in such a way to achieve optimum uplight control. The lenses shall also control horizontal light distribution so that Type II, III, IV or V IESNA distribution patterns are achieved.

C. LENS
   1. Lens options include: sag glass lens, shallow glass lens, or rippled acrylic deep dish lens. The glass lens shall be made of #9000 clear borosilicate glass (fully annealed). It shall maintain a minimum thickness of 0.3”. The deep dish globe shall be molded of rippled acrylic Acrylite Plus Acrylic Polymer, or equivalent, having a minimum thickness of 0.09”. The lens is secured by means of a cast A319 aluminum holding ring that is sealed to provide an IP66 Ingress rating. Additionally, a continuous circular gasket rated for 270°F must hold the lens into place within the cast ring assembly and assist in sealing the fixture.

D. DECORATIVE BODY
   1. The luminaire shall consist of a heavy Grade A319 cast aluminum housing that acts as the enclosure for the engine and is of adequate thickness to give structural rigidity. The engine must be affixed to the inside of the housing with stainless steel screws.
   2. The bottom decorative portion of the fixture is comprised of a one- piece spun aluminum alloy with a minimum thickness of 0.09”. The spinning is permanently affixed to the cast housing with the use of stainless steel hardware.

E. PLUMBIZER
   1. Mounting options include the KPL10, KPL11, KPL20, KPL21, KPL30, KPL31, KPL40, or approved equals.

F. DRIVER
   1. The LED universal dimmable driver will be class 2 and capable of 120 - 277V or 347 - 480V input voltage, greater than 0.9 power factor, less than 20% total harmonic distortion. The case temperature of the driver can range from -40°C to 70°C. Each LED system comes with a standard surge protection designed to withstand up to 20kV/10kA of transient line surge as per IEEE C62.41.2 C High. An in-line ferrite choke is utilized to provide protection against EFT’s. The driver assembly will be mounted on a heavy duty fabricated aluminum bracket to allow complete tool-less maintenance. Dimming capable using 1-10vdc (10% to 100%), 10v PWM, or resistance.

G. PHOTOMETRICS
   1. Fixtures are tested to IESNA LM79 specifications. These reports are typically available upon request.

H. CHROMATICITY
1. High output LED come standard at 3000K & 4000K (+/- 300K) with a minimum nominal 70 CRI.

I. LUMEN MAINTENANCE
1. Reported (TM21) and Calculated (L70) reports are available upon request with a minimum calculated value of 100,000 hrs.

J. WIRING
1. All internal wiring and connections shall be completed so that it will be necessary only to attach the incoming supply connectors to Mate-N-Lok connectors or to a terminal block. Mate-N-Lok shall be certified for 600V operation.
2. Internal wire connectors shall be crimp connector only and rated at 1000V and 150°C. All wiring to be CSA certified and/or UL listed, type SFF-2, SEWF-2, or SEW-2
3. No. 14 gauge, 150°C, 600V, and color coded for the required voltage.

K. THERMALS
1. Fixtures tested to DOE sanctioned standards to determine the maximum in-situ solder-point or junction-point temperatures of the LED emitters. This report is typically available upon request.

L. FINISH
1. Housing is finished with a 13 step KingCoat™ SuperDurable poly- ester TGIC powder coat. Standard colors include strobe white, brown metal, marina blue, gate gray, Chicago bronze, standard gold, standard black, federal green and rain forest.

M. MISCELLANEOUS
1. All exterior hardware and fasteners, wholly or partly exposed, shall be stainless steel alloy. All internal fasteners are stainless steel or zinc coated steel. All remaining internal hardware is stainless steel, aluminum alloy, or zinc coated steel.

N. WARRANTY
1. Luminaire comes with a 7-year limited warranty

O. CERTIFICATION
1. CSA US Listed
2. Suitable for wet locations ISO 9001
3. IP66
4. ARRA Compliant
5. LM79 / LM80 Compliant

P. DRIVER INFO
1. >0.9 Power Factor
2. <20% Total Harmonic Distortion 120 - 277V & 347 - 480V
3. -40°C Min. Case Temperature 70°C Max. Case Temperature Surge Protection: ANSI C136.2 extreme level 20kV/10kA Dimming Capable: 1-10vdc

Q. EPA
1. Flat Lens: 0.97 sq. ft.
2. Sag Lens: 1.02 sq. ft.
3. Shallow Lens: 1.20 sq. ft.
4. Deep Dish Acrylic: 1.52 sq. ft.
5. Deep Dish Glass: 1.52 sq. ft.

R. FIXTURE WEIGHT
1. Flat Lens: 43 lbs
2. Sag Lens: 51 lbs
3. Shallow Lens: 53 lbs
4. Deep Dish Acrylic: 49 lbs
5. Deep Dish Glass: 49 lbs

Pipe zone backfill

1. GENERAL

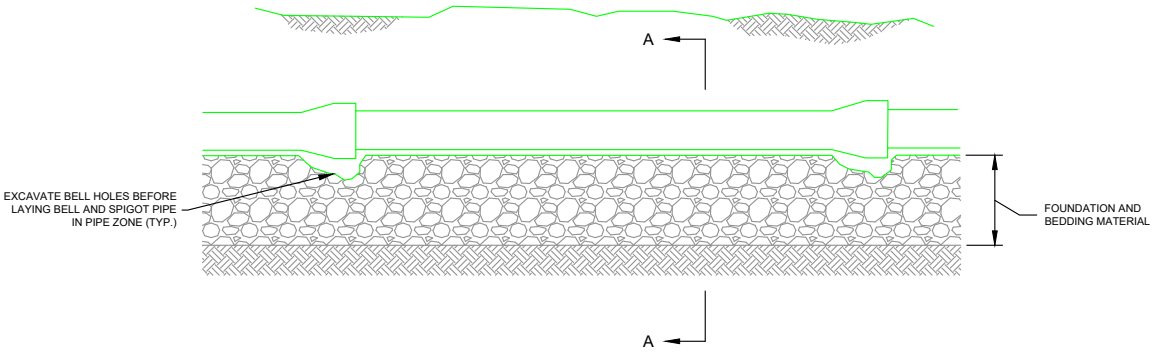
A. Install the pipe in the center of the trench or no closer than 6-inches from the wall of the pipe to the wall of the trench.

2. PRODUCTS

A. Base Course: Untreated base course, APWA Section 32 11 23. Do not use gravel as a base course without ENGINEER's permission.
B. Backfill: Common fill, APWA Section 31 05 13. Maximum particle size 2-inches.
C. Concrete: APWA Section 03 30 04.
D. Flowable Fill: Target is 60 psi in 28 days with 90 psi maximum in 28 days, APWA Section 31 05 15. It must flow easily requiring no vibration for consolidation.
E. Stabilization-Separation Geotextile: Moderate or high at CONTRACTOR's choice, APWA Section 31 05 19.

3. EXECUTION

A. Excavate the Pipe Zone: Width is measured at the pipe spring line and includes any necessary sheathing. Provide width recommended by pipe manufacturer. Follow manufacturer's recommendations when using trench boxes.
B. Foundation Stabilization: Get ENGINEER's permission before installing common fill. Vibrate to stabilize. Installation of stabilization-separation geotextile will be required to separate backfill material and native subgrade materials if common fill cannot provide a working surface or prevent soils migration.
C. Bedding: Follow APWA Section 33 05 20 requirements and the following provisions.
    1) Furnish untreated base course material unless specified otherwise by pipe manufacturer.
    2) Maximum lift thickness is 8-inches.
    3) Bedding immediately under the pipe should not be compacted, but loosely placed.
    4) Compaction is 95 percent or greater relative to a modified proctor density, APWA Section 31 23 26.
    5) When using concrete, provide at least Class 2,000, APWA Section 03 30 04.
D. Pipe Zone: DO NOT USE sewer rock, pea gravel, or recycled RAP aggregate in the pipe zone. Water jetting is NOT allowed.
    1) Maximum lift thickness is 8-inches before compaction. Compaction is 95 percent or greater relative to a modified proctor density, APWA Section 31 23 26 unless pipe manufacturer requires more stringent installation.
    2) Submission of quality control compaction test result data developed for the haunch zone may be requested by ENGINEER at any time. CONTRACTOR is to provide results of tests immediately upon request.
E. Flowable Fill (when required and if allowed by pipe manufacturer):
    1) Place the controlled low strength material, APWA Section 31 05 15 or UDOT Specification Section 03575.
    2) Prevent pipe flotation by installing in lifts and providing pipe restraints as required by pipe manufacturer.
    3) Reset pipe to line and grade if pipe "floats" out of position.



ELEVATION VIEW
N.T.S.

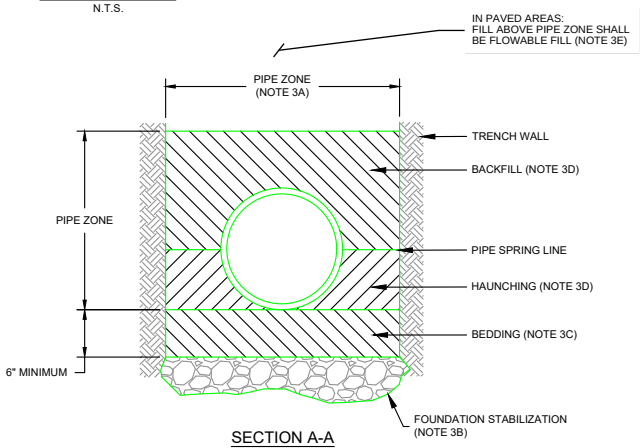
INSTALLATION:

CONCRETE PIPE: FOLLOW ASTM C 1479
* STANDARD PRACTICE FOR INSTALLATION OF PRECAST CONCRETE SEWER, STORM DRAIN, AND CULVERT PIPE USING STANDARD INSTALLATIONS.

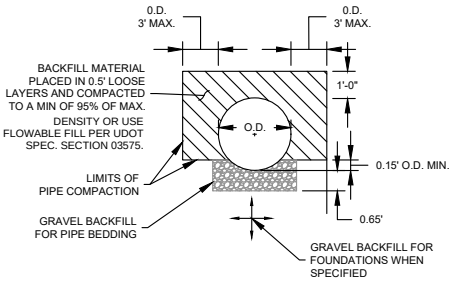
PLASTIC PIPE: FOLLOW ASTM D 2321
* STANDARD PRACTICE FOR UNDERGROUND INSTALLATION OF THERMOPLASTIC PIPE FOR SEWERS AND OTHER GRAVITY-FLOW APPLICATIONS.

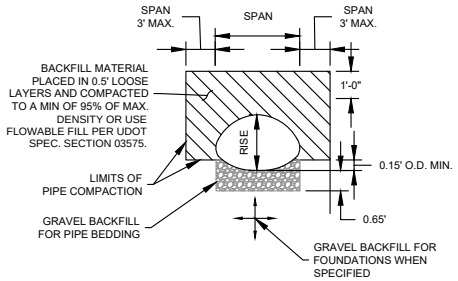
CORRUGATED METAL PIPE: FOLLOW ASTM A 798
* STANDARD PRACTICE FOR INSTALLING FACTORY-MADE CORRUGATED STEEL PIPE FOR SEWERS AND OTHER APPLICATIONS.

VITRIFIED CLAY PIPE: FOLLOW ASTM C 12
* STANDARD RECOMMENDED PRACTICE FOR INSTALLING VITRIFIED CLAY PIPE LINES.



SECTION A-A
N.T.S.





PIPE	SIZE (INCES)	MIN. DISTANCE BETWEEN BARRELS
CIRCULAR PIPE	12" TO 24"	12"*
CONCRETE AND METAL	30" TO 96"	DIAM. DIVIDED BY 2
(DIAMETER)	102" TO 180"	48"
PIPE-ARCH	18" TO 36"	12"
METAL ONLY	43" TO 142"	SPAN DIVIDED BY 3
(SPAN)	148" TO 199"	48"

NOTES:

1. PIPE COMPACTION LIMITS SHOWN ON THIS PLAN ARE FOR PIPE CONSTRUCTION IN AN EMBANKMENT. FOR PIPE CONSTRUCTION IN A TRENCH, THE HORIZONTAL LIMITS OF THE PIPE COMPACTION ZONE SHALL BE THE WALLS OF THE TRENCH.
2. O.D. IS EQUAL TO THE OUTSIDE DIAMETER OF A PIPE OR THE OUTSIDE SPAN OF A PIPE-ARCH. THE DIMENSIONS SHOWN AS O.D. WITH 3' AND 4' MAXIMUM SHALL BE O.D. UNTIL O.D. EQUALS 3' AND 4' AT WHICH POINT 3' AND 4' SHALL BE USED.

* 1'-0" FOR DIAMETERS 12" THROUGH 42" AND FOR SPANS THROUGH 50". 2'-0" FOR DIAMETERS GREATER THAN 42" AND FOR SPANS GREATER THAN 50".

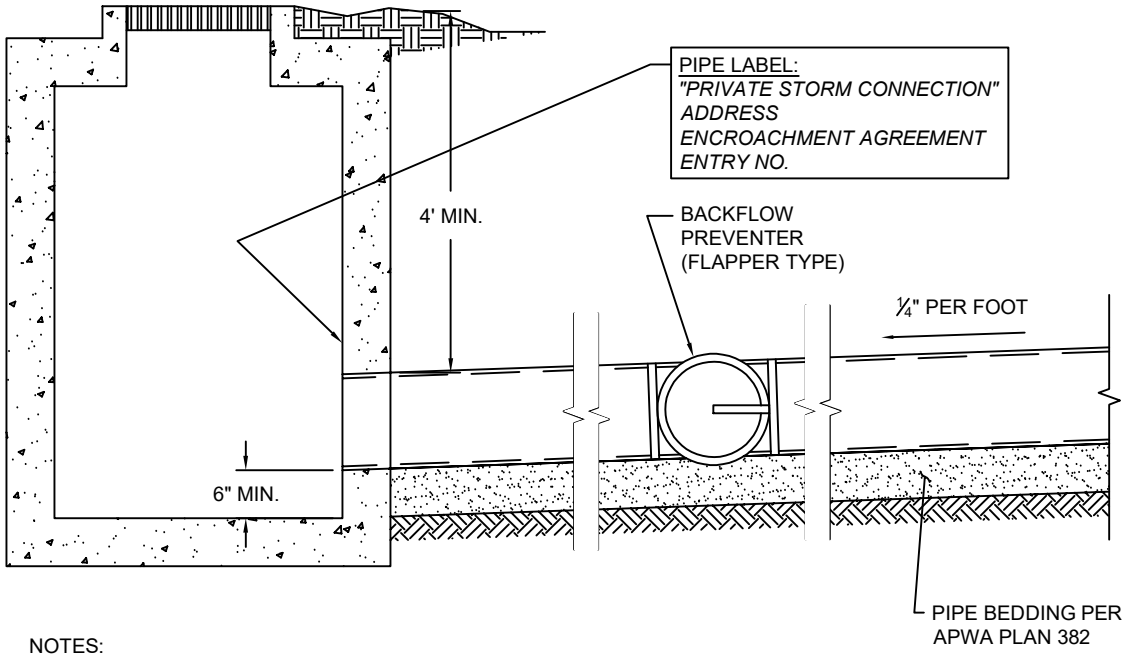
	1	382



NOTES:

1. THE CONNECTION TO THE STORM SYSTEM SHALL BE WITNESSED BY INSPECTOR.
2. THE SLOPE OF THE SERVICE SHOULD BE ¼" PER FOOT (IT SHALL BE NO LESS THAN ⅛").
3. THE LATERAL SHALL HAVE A MINIMUM OF 4' OF COVER TO THE FINISHED GRADE WHERE THE CONNECTION IS MADE TO THE STORM SYSTEM.
4. PIPE SHALL BE CORED AND GROUTED INTO THE CATCH BASIN WITH GROUT PER APWA SPEC. SECTION 03 61 00.
5. THE APPLICANT SHALL RECORD AN ENCROACHMENT AGREEMENT WITH THE CITY. THE CITY IS NOT RESPONSIBLE FOR ANY DAMAGE TO THE PRIVATE PROPERTY RESULTING FROM THIS CONNECTION TO THE STORM SYSTEM.

DIVISION 400 UNUSED

DIVISION 500 WATER

WATER STANDARD PLANS

2025

PREFACE

These standard plans incorporate current Water regulations and City water system operation, maintenance, and asset management considerations.

The plan numbering structure of this document follows the same basic structure as the APWA Standard Plans, however, there are some differences. Following is an explanation of the structure of this document:

1. Part 5 – Water Systems. Standard Plan divisions for Water system related details are:
    - Preface, Updates, and Table of Contents
    - Water Notes
    - Fire Hydrants
    - Water Meters
    - Corrosion Protection Systems
    - Piping
    - Thrust Blocks
    - Valves
    - Trenching
    - General
    - Water System Field Observation Guidelines

2. Numbering – A plan number having a suffix of “S” identifies that the plan contains index, legend, detail specific notes, and acceptable manufacturer and parts numbers related to the standard plan.

This document is intended to be altered periodically to ensure that the most current Park City Standards are available for public use. This document will be revised and published on the City’s web site as updates are approved and adopted.

THE FOLLOWING IS A SUMMARY OF CHANGES MADE TO DRAWINGS

2025

500: Updated notification requirements. Added record drawing and geospatial data requirements. Updated water interruption requirements. Updated backflow and booster pump information.
520: Updated water meter sizing calculations. Updated water main tapping requirements.
523 S: Added double check backflow assembly. Updated approved manufacturers and models.
526 S: Added double check backflow assembly. Updated approved manufacturers and models.
527 & 527 S: Added swing check backflow assembly.
528 & 528 S: Added swing check backflow assembly. Updated backflow information.
547-B: Added DDW exception requirement. Removed looped water line.
572: Added hoop steel size
573-E.3: Updated backpanel requirements.
FIELD OBSERVATION GUIDELINES: Updated AWWA Standards.

*All drawing updates are shown with updated date and revision in title block.

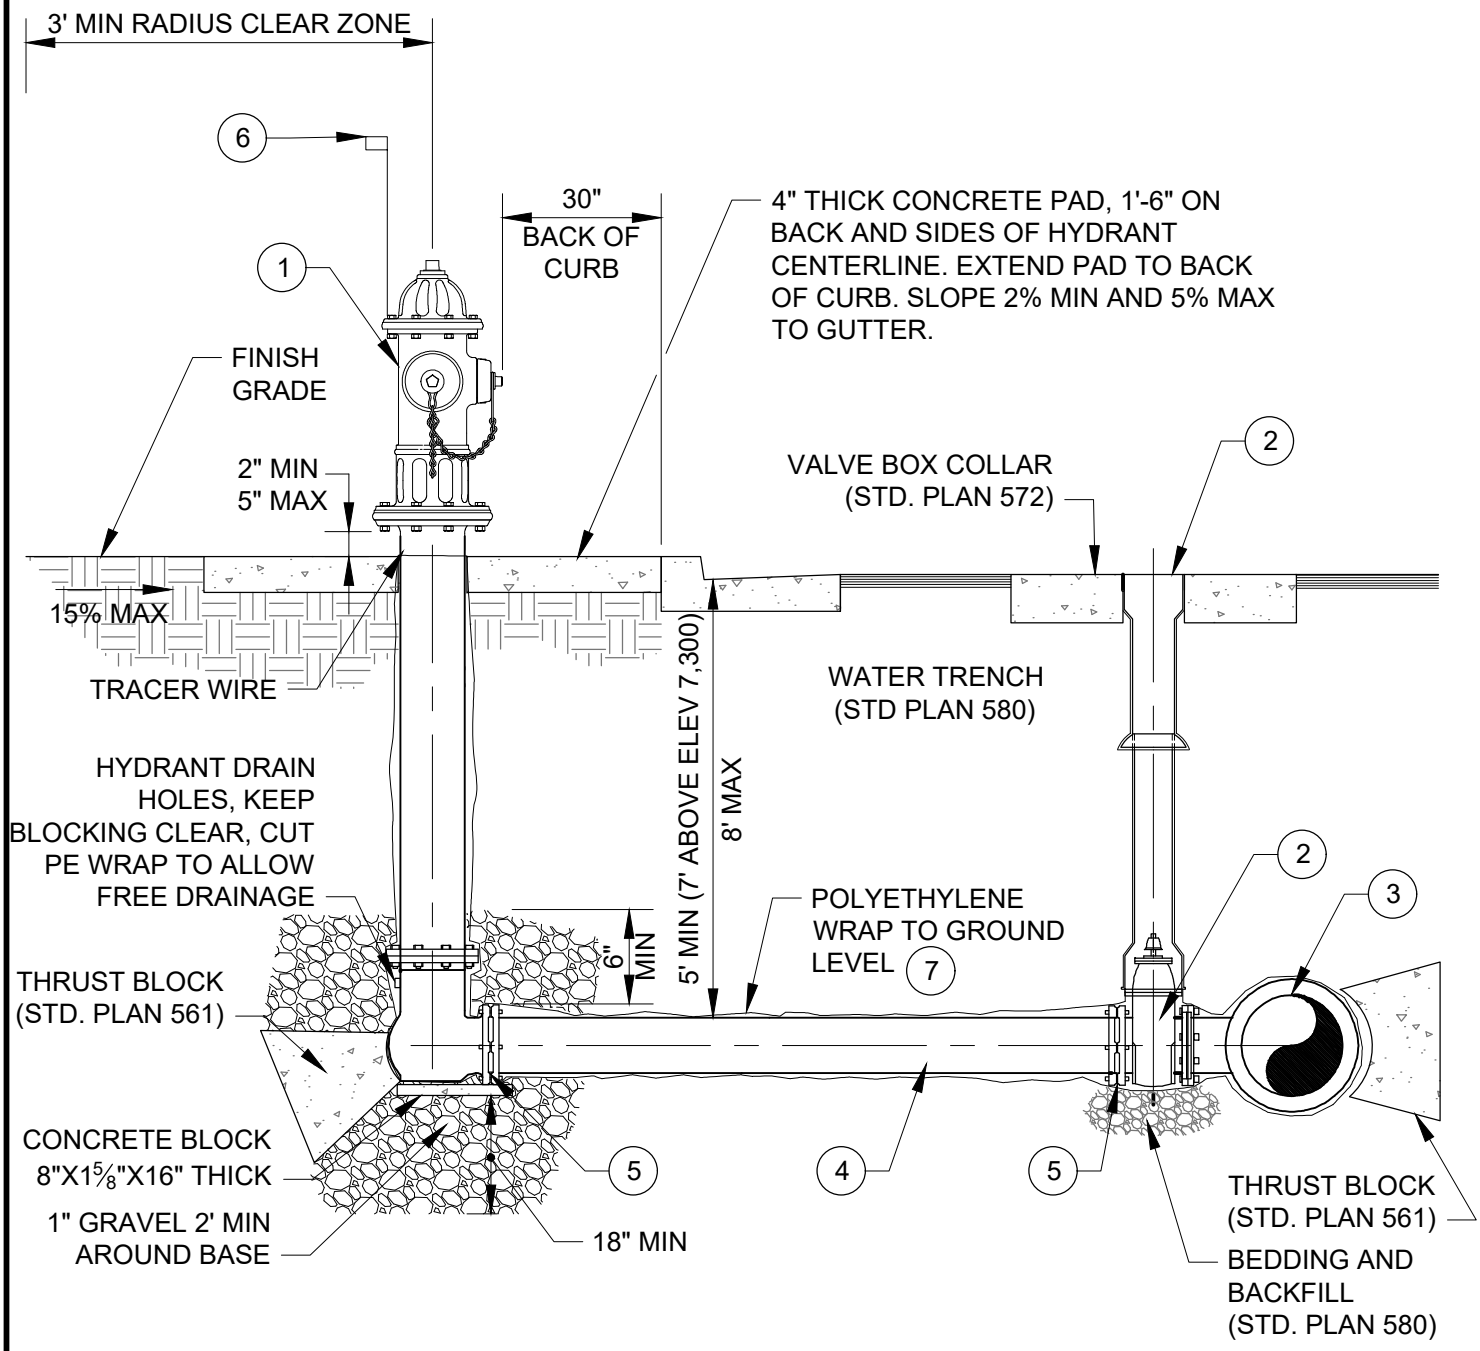
GENERAL WATER NOTES

1. THE FOLLOWING DOCUMENTS ARE INCORPORATED INTO THESE CONTRACT DOCUMENTS BY REFERENCE:
   a. *PARK CITY DESIGN STANDARDS, CONSTRUCTION SPECIFICATIONS, AND STANDARD DETAILS*
   b. AMERICAN WATER WORKS ASSOCIATION STANDARDS (AWWA)
   c. UTAH DEPARTMENT OF ENVIRONMENTAL QUALITY, DIVISION OF DRINKING WATER (DDW), R309-550 FACILITY DESIGN AND OPERATION: TRANSMISSION AND DISTRIBUTION PIPELINES
   d. INTERNATIONAL PLUMBING CODE
2. ALL PIPE, JOINTS, FITTINGS, VALVES, AND FIRE HYDRANTS SHALL CONFORM TO ANSI/NSF STANDARD 61 AND APPLICABLE SECTIONS OF AWWA STANDARDS C104-08 THROUGH C550-05 AND C900-07 THROUGH C950-07. ALL BRASS AND BRONZE PIPE, FITTINGS, AND VALVES SHALL MEET LOW LEAD COMPLIANCE REQUIREMENTS IN ACCORDANCE WITH ANSI/ASTM 371.
3. ALL PRODUCTS AND MATERIALS SHALL BE “MADE IN THE USA”, UNLESS SPECIFICALLY APPROVED BY THE PARK CITY WATER DIRECTOR. STEEL AND IRON MATERIAL PRODUCTS SUCH AS PIPE, FITTINGS, VALVES, MANHOLE, METER VAULT, AND VALVE BOX CASTINGS SHALL BE “MELTED & MANUFACTURED IN THE USA”. PARK CITY WATER ACKNOWLEDGES THAT CERTAIN SPECIALIZED WATER SYSTEM PRODUCTS INCLUDED IN THE ACCEPTABLE PRODUCTS LIST, SUCH AS HIGHER PRESSURE-RATED VALVES, MAY NOT MEET THE MADE IN USA REQUIREMENT AND ARE IN THE “QUALIFIED” MADE IN USA CATEGORY. THESE PRODUCTS HAVE BEEN PREVIOUSLY REVIEWED AND APPROVED.
4. UTAH DIVISION OF DRINKING WATER (DDW) APPROVALS:
   a. FOR PROJECTS WITH TRANSMISSION AND/OR DISTRIBUTION LINES OVER 16 INCHES IN DIAMETER AND/OR INCLUDING A WATER BOOSTER STATION OR PRESSURE REDUCING STATION, DDW APPROVALS OUTLINED IN R309-500 MUST BE OBTAINED IN CONJUNCTION WITH SUBMITTAL OF A WATER MASTER PLAN TO THE CITY. FOLLOWING DESIGN REVIEW BY THE CITY AND INCORPORATION OF CITY COMMENTS, THE DESIGN ENGINEER SHALL SUBMIT WATER CONSTRUCTION PLANS TO THE DDW TO OBTAIN APPROVALS. NO WATER CONSTRUCTION SHALL COMMENCE UNTIL ALL REQUIRED DDW APPROVALS HAVE BEEN OBTAINED.
   b. FOR PROJECTS WITH TRANSMISSION AND/OR DISTRIBUTION LINES OVER 16 INCHES IN DIAMETER AND/OR INCLUDING A WATER BOOSTER STATION OR PRESSURE REDUCING STATION A DDW FINAL OPERATING PERMIT IS REQUIRED PRIOR TO THE CITY OPERATING AND ACCEPTING THE WATER IMPROVEMENTS. FOLLOWING THE CITY’S WATER SYSTEM WALK-THROUGH AND THE CONTRACTOR’S SUBSEQUENT COMPLETION OF PUNCH-LIST ITEMS, THE CITY’S WATER DEPARTMENT WILL SUBMIT AN OPERATING PERMIT REQUEST TO THE DDW. THE FOLLOWING ITEMS ARE REQUIRED FROM THE DEVELOPER FOR THE CITY’S SUBMITTAL:
      i. FINAL RECORD DRAWINGS AND O&M MANUALS
      ii. HYDROSTATIC TESTING AND FLUSHING RECORDS (COMPLETED BY THE CITY’S INSPECTOR)
      iii. ACCEPTABLE BACTERIOLOGICAL TESTING RESULTS
      iv. CERTIFICATION BY THE (DEVELOPER’S) ENGINEER OF RECORD
5. THE CITY UTILIZES AN ADVANCED METERING INFRASTRUCTURE (AMI) SYSTEM. THE DEVELOPER MAY BE REQUIRED TO CONDUCT A PROPOGATION STUDY AND INSTALL RESULTING RECOMMENDED IMPROVEMENTS TO FACILITATE A CLEAR SIGNAL TO THE PROJECT. REFER TO STANDARD PLAN 520 FOR SPECIFIC METER TRANSMITTER UNIT (MXU) REQUIREMENTS.
6. REFER TO APPLICABLE STANDARD PLANS FOR WATER SYSTEM DETAILS AND REQUIREMENTS
7. EXTERNAL CORROSION PROTECTION SHALL BE INCLUDED ON ALL WATER SYSTEM IMPROVEMENTS, REFERENCE STANDARD PLAN 534 FOR REQUIREMENTS. A SOILS ANALYSIS MAY BE REQUIRED IN CONJUNCTION WITH THE DESIGN OF THE WATER SYSTEM TO DETERMINE THE EXTENT OF CORROSION PROTECTION REQUIRED.
8. REFER TO STANDARD PLAN 520 FOR GENERAL REQUIREMENTS FOR WATER METERS, METER VAULTS, AND WATER SERVICE LINES
9. CITY INSPECTION OF WATER SYSTEM IMPROVEMENTS WILL FOLLOW THE “*WATER SYSTEM FIELD OBSERVATION GUIDELINES*” AND ESTABLISHED CITY POLICIES. CONTRACTOR SHALL PROVIDE NECESSARY ASSISTANCE TO MEET THE GUIDELINE REQUIREMENTS.
10. NOTIFY WATER DEPARTMENT AT LEAST 5 BUSINESS DAYS BEFORE PERFORMING ANY WATER RELATED WORK. ARRANGE A PRECONSTRUCTION CONFERENCE SPECIFIC TO WATER CONSTRUCTION WITH THE CITY ENGINEER AND WATER DEPARTMENT AT LEAST 5 BUSINESS DAYS BEFORE START OF WORK. FOR PROJECTS INVOLVING ONLY SERVICE LINE AND/OR METER VAULT INSTALLATION, AN ON-SITE MEETING WITH THE CITY ENGINEER 48 HOURS PRIOR TO CONSTRUCTION IS ACCEPTABLE.
11. FOR TEMPORARY USE OF EXISTING WATER SYSTEM AND FIRE HYDRANTS TO OBTAIN CONSTRUCTION WATER, REFER TO STANDARD PLAN 531.

12. ALL CONSTRUCTION OF WATER SYSTEM SHALL BE CLEARLY STAKED BY THE DEVELOPER'S OR CONTRACTOR'S SURVEYOR. STAKING SHALL INCLUDE ALL BENDS, VALVES, HYDRANTS, SERVICES, METER VAULTS, AND SPECIALS. A MINIMUM OF 50-FOOT STATIONING IS REQUIRED FOR PIPELINE. PROVIDE RECORD DRAWINGS AND GEOSPATIAL DATA OF WATER INFRASTRUCTURE TO THE WATER DEPARTMENT.
13. CHANGES TO THE APPROVED WATER PLANS, INCLUDING PIPE ALIGNMENT, SIZE, AND DEPTH AS WELL AS FITTINGS, VALVES, SERVICES, AND METER VAULT LOCATIONS SHALL BE AUTHORIZED BY THE PUBLIC UTILITIES ENGINEER OR PUBLIC UTILITIES DEPARTMENT PRIOR TO INSTALLATION.
14. WATER SERVICE INTERRUPTION. THE FOLLOWING SHALL BE MET WITH RESPECT TO THE INTERRUPTION OF SERVICE TO CUSTOMERS INCLUDING THE SHUTDOWN OF THE EXISTING WATER SYSTEM:
    a. CONTRACTOR SHALL NOT OPERATE EXISTING WATER VALVES
    b. SCHEDULE SERVICE WORK REQUIRING WATER SERVICE INTERRUPTIONS OR SHUTDOWN OF THE EXSTING WATER SYSTEM A MINIMUM OF 96 HOURS IN ADVANCE WITH THE WATER DEPARTMENT (48HR WATER DEPARTMENT REVIEW, AND 48HR NOTIFICATION PERIOD)
    c. LIMIT INTERRUPTIONS TO OCCUR AND BE COMPLETED ON MONDAY THRU FRIDAY, 9:00 AM TO 4:00 PM. NO INTERRUPTIONS SHALL OCCUR ON WEEKENDS, OR HOLIDAYS.
    d. CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFICATION TO AFFECTED CUSTOMERS. CONTACT THE WATER DEPARTMENT FOR NOTIFICATION REQUIREMENTS. BE ADVISED THAT ON OCCASION VALVES IN THE EXISTING WATER SYSTEM MAY BE INOPERABLE AND MAY REQUIRE NOTIFICATION OF A LARGER AREA. IF VALVE MAINTENANCE IS REQUIRED, A SHUTDOWN DELAY OF SEVERAL DAYS SHOULD BE EXPECTED.
    e. FOR WATER SHUTDOWNS LONGER THAN 8 HOURS, CONTRACTOR SHALL SUBMIT A TEMPORARY WATER PLAN TO KEEP ALL CUSTOMERS IN SERVICE. ALL COSTS ASSOCIATED WITH MAINTAINING SERVICE TO AFFECTED CUSTOMERS SHALL BE BORNE BY THE CONTRACTOR
    f. THE WATER DEPARTMENT RESERVES THE RIGHT TO RESTRICT, MODIFY, OR DENY APPLICATIONS AS NEEDED TO MINIMIZE WATER SERVICE INTERRUPTIONS AND PROTECT PUBLIC HEALTH.
    g. CONTRACTOR SHALL HAVE ALL PERTINENT PARTS AND MATERIALS ON SITE PRIOR TO SHUTDOWN OF THE WATER SYSTEM BY THE WATER DEPARTMENT
    h. CONSTRUCTION EXCAVATION MUST BE PREPARED AND THE WATER MAIN EXPOSED PRIOR TO SHUTDOWN OF THE WATER SYSTEM
15. EXPOSE EXISTING WATER PIPES AND VERIFY HORIZONTAL AND VERTICAL LOCATION PRIOR TO INSTALLING NEW IMPROVEMENTS, POTHOLE ANY AND ALL UTILITIES TO ELIMINATE POTENTIAL CONFLICTS
16. THE HORIZONTAL DISTANCE BETWEEN WATER LINES AND SANITARY SEWER LINES SHALL BE AT LEAST 10 FEET. WHERE A WATER MAIN AND SEWER MUST CROSS, THE WATER MAIN SHALL BE AT LEAST 18 INCHES ABOVE THE SEWER LINE. SEPARATION DISTANCES SHALL BE MEASURED EDGE-TO-EDGE (I.E. FROM THE NEAREST EDGES OF THE FACILITIES)
17. IF THE BASIC SEPARATION STANDARDS CANNOT BE MET, AN EXCEPTION TO THE RULE CAN BE APPLIED WITH ADDITIONAL MITIGATION MEASURES TO PROTECT PUBLIC HEALTH, IN ACCORDANCE WITH UTAH ADMINISTRATIVE CODE R309-105-6(2)(B).
18. THE OPEN ENDS OF ALL PIPELINES UNDER CONSTRUCTION SHALL BE COVERED AND EFFECTIVELY SEALED AT THE END OF THE DAY'S WORK.
19. PROVIDE ACCESS TO EXISTING MAIN LINE VALVES THROUGHOUT CONSTRUCTION. ALL VALVES MUST BE ACCESSIBLE WITHIN 24 HOURS AFTER PAVING OR COLLAR ADJUSTMENTS.
20. UNDER NO CIRCUMSTANCE SHALL THE PIPE OR ACCESSORIES BE DROPPED INTO THE TRENCH.
21. WHERE JOINING EXISTING ASBESTOS CEMENT PIPE, CUT IN ACCORDANCE WITH OSHA REQUIREMENTS AND DISPOSE OF IN ACCORDANCE WITH APPLICABLE ENVIRONMENTAL REGULATIONS.
22. PROVIDE EXTENSIONS ON VALVE STEM TOPS HAVING OVER 5 FEET BURY. REFER TO STANDARD PLAN 570.
23. INSTALL AIR AND VACUUM VALVES PER STANDARD PLANS 574 AND 575 AT HIGH POINTS (8" DIAMETER PIPE OR LARGER) AS DEEMED NECESSARY BY THE DESIGN ENGINEER AND CITY.
24. THRUST BLOCKING IS REQUIRED ON ALL WATER MAIN AND FIRE LINES. REFER TO STANDARD PLANS 561 AND 562
25. REMOVE AND CORRECT DEFECTIVE WORK WITHIN 24 HOURS FOLLOWING WRITTEN NOTIFICATION BY THE CITY ENGINEER.
26. CONSTRUCT TEMPORARY FLUSHING VALVES/BLOW-OFF PIPING ON THE END OF NEW WATER MAINS AS REQUIRED TO MEET FLUSHING REQUIREMENTS. CONSULT WITH PUBLIC UTILITIES ENGINEER TO DETERMINE ACCEPTABLE LOCATIONS AND SIZING REQUIREMENTS. MINIMUM ACCEPTABLE FLUSHING VELOCITY FOR INITIAL FLUSH IS 3 FEET PER SECOND. DO NOT PERFORM INITIAL FLUSH THROUGH FIRE HYDRANTS WITHOUT APPROVAL FROM PARK CITY PUBLIC UTILITIES ENGINEER. ALL INTERNAL COMPONENTS OF FIRE HYDRANT TO BE REMOVED BY CONTRACTOR PRIOIR TO INTIAL FLUSHING. CONTRACTOR TO BE RESPONSIBLE FOR REINSTALLATION OF COMPONENTS AND RESPONSIBLE FOR ANY DAMAGES.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	**DATE** 05/2025 **REV.** 4	**GENERAL WATER NOTES**	**STD. PLAN** **500.2**

27. ALL TYPES OF INSTALLED PIPE SHALL BE PRESSURE TESTED AND LEAKAGE TESTED IN ACCORDANCE WITH AWWA STANDARD C600-10
28. ALL NEW WATER MAINS OR APPURTENANCES SHALL BE DISINFECTED IN ACCORDANCE WITH AWWA STANDARD C651 OR A METHOD APPROVED BY THE PUBLIC UTILITIES ENGINEER. THE SPECIFICATIONS SHALL INCLUDE DETAILED PROCEDURES FOR THE ADEQUATE FLUSHING, DISINFECTION AND MICROBIOLOGICAL TESTING OF ALL WATER MAINS. ON ALL NEW AND EXTENSIVE DISTRIBUTION SYSTEM CONSTRUCTION, EVIDENCE OF SATISFACTORY DISINFECTION SHALL BE PROVIDED TO THE PUBLIC UTILITIES ENGINEER. SAMPLES FOR COLIFORM ANALYSES SHALL BE COLLECTED AFTER DISINFECTION IS COMPLETE AND THE SYSTEM IS REFILLED WITH DRINKING WATER. A STANDARD HETEROTROPHIC PLATE COUNT IS ADVISABLE. THE USE OF WATER FOR PUBLIC DRINKING WATER PURPOSES SHALL NOT COMMENCE UNTIL THE BACTERIOLOGICAL TESTS INDICATE THE WATER IS FREE FROM CONTAMINATION.
29. DISINFECTING, FLUSHING, AND HYDROSTATIC PLANS SHALL BE SUBMITTED TO THE PUBLIC UTILITIES ENGINEER A MINIMUM OF 5 WORKING DAYS PRIOR TO COMMENCEMENT OF ACTIVITY. CONTRACTOR SHALL NOT OPERATE EXISTING WATER VALVES.
30. BACKFLOW PREVENTION DEVICES MAY BE REQUIRED. IF REQUIRED, THE CITY MAY NOT SET A WATER METER UNTIL AN APPROVED AND TESTED BACKFLOW DEVICE IS INSTALLED AND INSPECTED
31. ALL BACKFLOW PREVENTERS HAVE TO BE TESTED ANNUALY TO ENSURE THAT THEY ARE FUNCTIONING PROPERLY. A VISUAL CHECK OF AIR GAPS IS SUFFICIENT, BUT MECHANICAL BACKFLOW PREVENTERS HAVE TO BE TESTED BY A STATE CERTIFIED BACKFLOW SPECIALIST, WITH PROPERLY CALIBRATED GAUGE EQUIPMENT. TO OBTAIN A LIST OF STATE CERTIFIED TESTERS REFER TO THE UTAH DIVISION OF DRINKING WATER (DDW), CROSS CONNECTION CONTROL & BACKFLOW PREVENTION WEBSITE.
32. FIRE SPRINKLER SYSTEM BOOSTER PUMPS: FIRE SPRINKLER SYSTEM PUMPS, INTEGRAL TO THE FIRE SPRINKLER PIPING, TO MEET FIRE SPRINKLER PRESSURE DESIGN REQUIREMENTS ARE CONSIDERED OUTSIDE THE INTENT OF UTAH DDW REGULATION R309-550-11(3) AND DO NOT REQUIRE APPROVAL OF THE DDW IF THEIR INSTALLATION CONFORMS TO UTAH ADOPTED PLUMBING CODE AND NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) 13 D. PUMPS SHALL BE CONNECTED ON THE BUILDING SIDE OF THE WATER METER VAULT AND SHALL BE APPROVED BY THE CITY ENGINEER AND BUILDING DEPARTMENT. PUMP APPROVAL IS FOR FIRE SPRINKLER SYSTEMS ONLY AND NOT FOR DOMESTIC USE.



NOTES:

1. REFER TO STD. PLAN 511-S FOR LEGEND ITEMS, APPROVED PARTS LIST, AND DETAIL NOTES.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2024 REV. 2	**FIRE HYDRANT**	STD. PLAN **511**

LEGEND AND APPROVED PARTS LIST

ITEM	DESCRIPTION	ACCEPTABLE MANUFACTURER	MODELS
①	FIRE HYDRANT, DRY BARREL, AWWA C502	MUELLER	SUPER CENTURION 250 3-WAY A-423, 5-1/4 PUMPER NOZZLE, NATIONAL STD. OPERATING NUT (OPENS LEFT) OR EQUAL IF UNAVAILABLE
②	BURIED VALVE AND VALVE BOX (STD. PLAN 570), 6" GATE VALVE, NRS, FLG X MJ, 2" SQ. OPERATING NUT, AWWA C509	MUELLER	SERIES 2360, SST BONNET BOLTS OR EQUAL
③	6" DUCTILE IRON FLANGE TEE (OR TAPPING SEE DETAIL 542), AWWA C110

DETAIL NOTES

1. LOCATE HYDRANT AS SHOWN ON THE APPROVED PLANS
2. SET HYDRANT PLUMB WITH PUMPER NOZZLE FACING STREET
3. ADJUST TO GRADE WITH MAXIMUM OF ONE (1) HYDRANT BARREL EXTENSION (AWWA C502)
4. PROVIDE 316 STAINLESS STEEL BOLTS FOR ANY FLANGES THAT ARE BELOW GRADE INCLUDING BOLTS FOR HYDRANT RISERS. 304 STAINLESS STEEL BOLTS ARE ACCEPTABLE FOR EXPOSED/ABOVE GRADE FLANGES.
5. RECOAT DAMAGED OR MARRED HYDRANT COATING AFTER INSTALLATION (UV RESISTANT, HIGH GLOSS, POLYURETHANE ENAMEL COATING, FIRE HYDRANT RED)
6. REFER TO SPECIFICATIONS FOR FLUSHING, HYDROSTATIC TESTING, AND DISINFECTING REQUIREMENTS
7. APPLY WAX TAPE COATING SYSTEM TO VALVE BONNET BOLTS AND ALL OTHER BURIED BOLTS, NUTS, CONNECTORS, AND COUPLINGS, AWWA C 217. (STD PLAN 534)
8. CATHODICALLY PROTECT PIPE AND OR FITTINGS, WHEN EXISTING SOIL CONDITIONS REQUIRE PER SOILS ANALYSIS (STD. PLAN 534)
9. HYDRANT DRAINS SHALL NOT BE CONNECTED TO, OR LOCATED WITHIN, 10 FEET OF SANITARY SEWERS. WHERE POSSIBLE, HYDRANT DRAINS SHALL NOT BE LOCATED WITHIN 10 FEET OF STORM DRAINS.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	**DATE** 03/2024 **REV.** 3	**FIRE HYDRANT**	**STD. PLAN** **511 S**

GENERAL REQUIREMENTS – WATER METER, METER VAULT, AND SERVICE LINE

REFER TO SPECIFICATIONS AND STANDARD PLANS FOR DETAILED WATER METER, METER VAULT, AND SERVICE LINE REQUIREMENTS

WATER METER & METER VAULT:

1. WATER METER AND RADIOREAD METER TRANSCEIVER UNIT (MXU) WILL BE PROVIDED BY THE CITY. ALL OTHER COMPONENTS SHALL BE PROVIDED AND INSTALLED BY THE DEVELOPER/BUILDER. PROVIDE 2 WEEKS ADVANCE NOTICE TO THE WATER DEPARTMENT FOR METER SET REQUESTS EXCEEDING FIVE METERS OR METER SIZES GREATER THAN 2 INCHES. APPROPRIATE METER APPLICATION AND PAYMENT OF FEES APPLY BEFORE THE CITY WILL SET A METER.
2. WATER METER SIZE, AND WATER SERVICE LINE SIZE SHALL BE APPROVED BY THE PUBLIC UTILITY ENGINEER PRIOR TO INSTALLATION OF ANY SERVICE LINE, METER VAULT, OR WATER MAIN TAP. APPROVED WATER METER SIZING CALCULATIONS, INCLUDING WATER SERVICE LINE SIZING FROM THE METER TO THE STRUCTURE ARE REQUIRED. A 2" MINIMUM WATER SERVICE SIZE IS REQUIRED FROM THE MAIN LINE.
3. INSTALLATION OF A WATER METER EXCEEDING 2-INCH WILL REQUIRE PUBLIC UTILITIES ENGINEER APPROVAL. THE METER AND VAULT WILL REQUIRE AN APPROVED FLOWRATE AND DEMAND ANALYSIS BY THE DEVELOPER / BUILDER AND A SITE SPECIFIC DESIGN.
4. INSTALLATION OF A WATER SERVICE LINE SIZE FOR A 2" METER AND GREATER WILL REQUIRE PUBLIC UTILITIES ENGINEER APPROVAL. THE SERVICE LINE REQUEST WILL REQUIRE SUBMITTAL OF AN APPROVED FLOWRATE AND DEMAND ANALYSIS BY THE DEVELOPER/BUILDER.
5. USE OF AN INSIDE WATER METER WILL REQUIRE PUBLIC UTILITIES ENGINEER APPROVAL. INSIDE METERS SHALL BE USED ONLY FOR COMMERCIAL OR MULTI-UNIT BUILDINGS SUBJECT TO THE FOLLOWING CONDITIONS:
   A. UNRESTRICTED ACCESS IS AVAILABLE TO WATER DEPARTMENT PERSONNEL
   B. THE METER SHALL BE LOCATED IN A SEPARATE MECHANICAL ROOM
   C. THE METER SHALL BE ASSOCIATED WITH FIRE PROTECTION SPRINKLER SYSTEM (FIRE STACK) PLUMBING
   D. THE METER REQUIRES A SITE SPECIFIC DESIGN APPROVED BY THE FIRE MARSHAL, THE PARK CITY BUILDING DEPARTMENT, CITY ENGINEER, PUBLIC UTILITIES DEPARTMENT, AND THE PUBLIC UTILITIES WATER RESOURCE MANAGER. LAYOUT SHALL BE CONSISTENT WITH WATER STANDARD PLANS 523, 526, AND 528
   E. A REMOTE RADIOREAD METER TRANSCEIVER UNIT (MXU) DEVICE SHALL BE INSTALLED AT A LOCATION ACCEPTABLE TO THE WATER DEPARTMENT. REFER TO NOTE 11.
6. METER VAULT LOCATION SHALL BE APPROVED BY THE PUBLIC UTILITIES ENGINEER PRIOR TO INSTALLATION OF ANY SERVICE LINE OR WATER MAIN TAP. MINIMUM REQUIREMENTS AROUND METER VAULT MUST BE MET. NO POWER, IRRIGATION, COMMUNICATION, CABLING, ECT. WITHIN METER VAULT CLEARANCE AREA.
7. LOCATE METER VAULT, WHENEVER POSSIBLE, IN LANDSCAPE AREAS. PLACEMENT WITHIN A PAVED SURFACE, DRIVEWAY OR WALKWAY, REQUIRES WRITTEN APPROVAL PRIOR TO INSTALLATION OF THE SERVICE LINE OR WATER MAIN TAP. THE METER VAULT SHALL BE PLACED AT THE PUBLIC RIGHT OF WAY LINE. IN THE ABSENCE OF A PUBLIC R-O-W LINE, THE METER VAULT SHALL BE LOCATED WITHIN A DEDICATED EASEMENT AND A MAXIMUM OF FIVE FEET BEHIND THE CURB AND GUTTER OR SIDEWALK AS APPLICABLE.
8. EXTEND THE SERVICE LINE STUB ON THE CUSTOMER SIDE TO 5 FEET BEYOND THE METER VAULT WITH METER VAULT CONSTRUCTION. INSTALL END CAP AND MARKER ON SERVICE LINE TERMINATION.
9. LOCATE METER VAULT TO PROVIDE CONVENIENT, SAFE, AND UNINHIBITED ACCESS FROM A PUBLIC ROW OR WATER EASEMENT. NO FENCES SHALL BE LOCATED BETWEEN THE ROW/EASEMENT LINE AND THE METER VAULT. NO OBSTRUCTIONS OR UTILITIES SHALL BE LOCATED WITHIN 3 FEET OF THE OUTSIDE WALL OF THE METER VAULT. NO BUSHES, SHRUBS, OR PLANTS SHALL BE WITHIN 2 FEET OF THE METER LID AND NO TREES SHALL BE PLANTED SUCH THAT THE DRIP LINE AT MATURITY WILL BE WITHIN 3 FEET OF THE METER LID.

10. SET METER VAULT SET FLUSH WITH THE FINAL LANDSCAPE OR PAVEMENT GRADE. IF THE GROUND IS NOT TO FINAL GRADE AT THE TIME OF THE METER INSTALLATION OR INSPECTION, ADJUST METER VAULT WHEN FINAL GRADE IS ESTABLISHED AND ADJUST THE METER SETTER TO MEET REQUIRED VAULT DIMENSIONS. REFERENCE STANDARD PLANS 592 AND 593 FOR METER VAULT GRADING REQUIREMENTS.
11. IN MOST CASES THE METER TRANSCEIVER UNIT (MXU) DEVICE WILL MOUNT THROUGH THE METER VAULT LID. IF METER LOCATION DOES NOT PERMIT A CLEAR RELIABLE MXU DEVICE RADIO SIGNAL TO CITY FACILITIES, A REMOTE MXU DEVICE WILL BE REQUIRED. THE REMOTE MXU DEVICE WILL BE INSTALLED BY THE CITY, AT A LOCATION DETERMINED BY THE CITY, AT THE TIME OF THE METER INSPECTION. IN MOST CASES THE REMOTE MXU DEVICE WILL BE INSTALLED ON THE OUTSIDE OF THE BUILDING FACING A PUBLIC STREET. PROVIDE CONDUIT AND SIGNAL WIRE FROM METER VAULT TO REMOTE MXU DEVICE LOCATION, REFERENCE STANDARD PLAN 530. FOR DEVELOPMENT PROJECTS, A SIGNAL PROPAGATION STUDY AND INSTALLATION OF A NEW REPEATER STATION AT THE DEVELOPER'S EXPENSE MAY BE REQUIRED.
12. IF REPLACING METER VAULT, PROTECT EXISTING METER AND MXU DEVICE, TAG OR LEAVE IN VAULT. CONTACT PARK CITY WATER DEPARTMENT PRIOR TO REMOVING OR REPLACING METER.
13. PROTECT METER VAULT AND MXU DEVICE THROUGHOUT CONSTRUCTION.
14. A WATER METER WILL NOT BE SET BY THE CITY UNTIL THE METER VAULT AND SERVICE LINE ARE IN COMPLIANCE WITH THE MOST CURRENT VERSION OF THE ENGINEERING STANDARDS, STANDARD DRAWINGS, AND APPROVED PROJECT DRAWINGS, A METER INSPECTION HAS BEEN PERFORMED AND DEFICIENCIES CORRECTED, AND ALL APPLICABLE FEES PAID.
15. ALL BRASS AND BRONZE PIPE, FITTINGS, AND VALVES SHALL MEET LOW LEAD COMPLIANCE REQUIREMENTS IN ACCORDANCE WITH ANSI/ASTM 371.
16. PROVIDE COMPRESSION STYLE FITTINGS AND VALVES. <u>FLARED STYLE CONNECTIONS ARE NOT ALLOWED</u>.

<u>SERVICE LINE:</u>

1. ROUTE SERVICE LINES AT A 90 DEGREE ANGLE TO THE FRONT PROPERTY/R-O-W/EASEMENT LINE FROM THE WATER MAIN. AVOID ROUTING SERVICE LINES UNDER DRIVEWAYS.
2. MAINTAIN 5 FEET OF HORIZONTAL SEPARATION BETWEEN TAP LOCATION AND UTILITY CROSSINGS.
3. DUCTILE IRON WATER MAIN: MAINTAIN 2 FEET SEPARATION BETWEEN SERVICE LINE TAP AND ALL MAIN LINE FITTINGS, VALVES, PIPE JOINTS, AND OTHER SERVICE TAPS.
4. PVC WATER MAIN: MAINTAIN 3 FEET SEPARATION BETWEEN SERVICE LINE TAP AND ALL MAIN LINE FITTINGS, VALVES, PIPE JOINTS, AND OTHER SERVICE TAPS.
5. WATER SERVICE LINE SHALL BE CONTINUOUS. NO BENDS, FITTINGS, COUPLERS, OR CONNECTIONS, ARE PERMITTED BETWEEN WATER MAIN CORPORATION STOP AND THE METER VAULT CURB VALVE.
6. PROVIDE COMPRESSION STYLE VALVES FITTINGS. <u>FLARED STYLE CONNECTIONS ARE NOT ALLOWED</u>.
7. METER VAULTS AND SERVICE LINES MUST BE INSPECTED BY THE CITY PRIOR TO BACKFILLING, UNLESS SPECIFIC PRIOR APPROVAL IS PROVIDED BY THE CITY.
8. <u>TAPPING NEW CONSTRUCTION WATER MAIN:</u> NOTIFY AND SECURE INSPECTION OF INSTALLATION BY PUBLIC UTILITIES ENGINEER OR WATER DEPARTMENT PRIOR TO TAPPING WATER MAIN. PROVIDE TAPPING "COUPON" TO THE WATER DEPARTMENT.
9. <u>TAPPING EXISTING WATER MAIN:</u> NOTIFY AND SECURE INSPECTION OF INSTALLATION BY PUBLIC UTILITIES ENGINEER OR WATER DEPARTMENT 3 BUSINESS DAYS PRIOR TO TAPPING WATER MAIN. PROVIDE TAPPING "COUPON" TO THE WATER DEPARTMENT.
10. SERVICES LINES LARGER THAN 2-INCH DIAMETER SHALL MEET WATER MAIN REQUIREMENTS.
11. ALL BRASS AND BRONZE PIPE, FITTINGS, AND VALVES SHALL MEET LOW LEAD COMPLIANCE REQUIREMENTS IN ACCORDANCE WITH ANSI/ASTM 371
12. DISINFECT ALL NEW WATER SERVICES AND APPURTENANCES IN ACCORDANCE WITH AWWA STANDARD C651, THE SPECIAL REQUIREMENTS OF THE *PARK CITY DESIGN STANDARDS, CONSTRUCTION SPECIFICATIONS, AND STANDARD DETAILS,* AND THE *PARK CITY WATER SYSTEM FIELD OBSERVATION GUIDELINES*. DISINFECTING, FLUSHING, AND HYDROSTATIC PLANS SHALL BE SUBMITTED TO THE PUBLIC UTILITIES ENGINEER A MINIMUM OF 5 WORKING DAYS PRIOR TO COMMENCEMENT OF ACTIVITY. <u>CONTRACTOR SHALL NOT OPERATE EXISTING WATER VALVES.</u>
13. TRACER WIRE IS REQUIRED FROM WATER MAIN TO METER VAULT.
14. ALL BURIED FITTINGS SHALL BE WAXED TAPED (CORPORATION STOPS, SADDLES, ECT.)
15. NO IRRIGATION CONNECTIONS ARE ALLOWED WITHIN METER VAULT.

DETAIL NOTES

1. USE OF AN INSIDE WATER METER REQUIRES PUBLIC UTILITIES ENGINEER APPROVAL. REFERENCE WATER STANDARD PLAN 520 FOR APPLICABLE CONDITIONS.
2. FIRE SPRINKLER RISER WITH POTABLE WATER SERVICE: A SITE SPECIFIC DESIGN IS REQUIRED. THE FIRE PROTECTION SPRINKLER SYSTEM AND POTABLE WATER SYSTEM DESIGN SHALL BE APPROVED BY THE FIRE MARSHAL AND THE PARK CITY BUILDING DEPARTMENT. THE POTABLE WATER SERVICE CONNECTION AND METER ASSEMBLY DESIGN SHALL BE APPROVED BY THE PARK CITY BUILDING DEPARTMENT AND THE PUBLIC UTILITIES ENGINEER. DESIGN AND CONSTRUCTION SHALL COMPLY WITH APPLICABLE BUILDING AND PLUMBING CODES.
3. BACKFLOW PREVENTION: PROVIDE A DOUBLE CHECK BACKFLOW ASSEMBLY (DC) ON THE FIRE SPRINKLER RISER ASSEMBLY. REDUCED PRESSURE PRINCIPLE BACKFLOW ASSEMBLY (RP) ALLOWED WITH PUBLIC UTILITIES ENGINEER APPROVAL. STYLE TO BE DETERMINED BY THE BUILDING AND WATER DEPARTMENT BASED ON DEGREE OF HAZARD POSED BY FIRE SPRINKLER PROTECTION SYSTEM. BEFORE A CERTIFICATE OF OCCUPANCY CAN BE ISSUED BY THE BUILDING DEPARTMENT, BACKFLOW ASSEMBLY TESTING FOR PROPER OPERATION (PER CITY REQUIREMENTS BY A CERTIFIED TESTER RECOGNIZED BY THE CITY) IS REQUIRED AND A REPORT SUBMITTED.
4. CONNECTIONS TO THE WATER SYSTEM ARE NOT PERMITTED PRIOR TO THE POTABLE WATER METER ASSEMBLY OR THE FIRE SPRINKLER RISER BACKFLOW ASSEMBLY. THIS INCLUDES OUTSIDE IRRIGATION SUPPLY.
5. CLEARANCES: PROVIDE ADEQUATE CLEARANCES FROM FIRE RISER AND AROUND WATER METER ASSEMBLY. MAINTAIN: 9" MINIMUM FROM WALL TO FACE OF POTABLE WATER PIPING
   18" CLEAR ON EACH SIDE OF METER ASSEBLY
   36" CLEAR IN FRONT OF METER ASSEMBLY
6. LOCATE METER ASSEMBLY TWO (2) TO FOUR (4) FEET ABOVE THE FLOOR. POSITION METER HORIZONTAL WITH DIAL POINTING UP.
7. PROVIDE ISOLATION (CURB) VALVES AT METER INLET AND OUTLET
8. FOR MULTIPLE METERS PROVIDE A MANIFOLD WITH A MAIN CURB VALVE PRIOR TO THE MANIFOLD AND INDIVIDUAL CURB VALVES LOCATED PRIOR TO AND AFTER METERS.
9. PROVIDE A FLOOR DRAIN IN THE FIRE RISER ROOM WITHIN 10 FEET OF THE WATER METER LOCATION.
10. PROVIDE PIPE LABELS ON THE POTABLE WATER LINE BETWEEN THE FIRE RISER AND THE WATER METER DESIGNATING PIPE AS "POTABLE WATER".
11. PROVIDE PIPE ANCHORAGE TO SUPPORT METER YOKE AND ASSEMBLY INDEPENDENT OF THE POTABLE WATER SUPPLY PIPING AND BUILDING PLUMBING. PROVIDE PIPE STANDS OR UNISTRUT WALL STANDOFFS. DO NOT SUPPORT METER ASSEMBLY FROM OTHER PIPING.
12. PROVIDE A WALL PENETRATION AND CONDUIT FOR REMOTE RADIOREAD METER TRANSEIVER UNIT (MXU) DEVICE(S). COORDINATE ROUTING AND WALL PENETRATION LOCATION WITH THE WATER DEPARTMENT. REFERENCE WATER STANDARD PLANS 520 AND 530.
13. PROVIDE 1/2" EMT CONDUIT AND SUPPORTS FOR MXU SIGNAL WIRE IF DISTANCE TO WALL PENETRATION EXCEEDS 10 FEET
14. INSPECTION: CONTACT THE CITY ENGINEER FOR INSPECTION OF THE POTABLE WATER SYSTEM METER ASSEMBLY INSTALLATION
15. REFER TO STD. PLAN 500 AND THE SPECIFICATIONS FOR FLUSHING, HYDROSTATIC TESTING, AND DISINFECTING REQUIREMENTS

3" AND LARGER METER INSIDE SETTING

528 S.1

DETAIL NOTES

1. USE OF AN INSIDE WATER METER REQUIRES PUBLIC UTILITIES ENGINEER APPROVAL. REFERENCE WATER STANDARD PLAN 520 FOR APPLICABLE CONDITIONS.
2. FIRE SPRINKLER RISER WITH POTABLE WATER SERVICE: A SITE SPECIFIC DESIGN IS REQUIRED. THE FIRE PROTECTION SPRINKLER SYSTEM AND POTABLE WATER SYSTEM DESIGN SHALL BE APPROVED BY THE FIRE MARSHAL AND THE PARK CITY BUILDING DEPARTMENT. THE POTABLE WATER SERVICE CONNECTION AND METER ASSEMBLY DESIGN SHALL BE APPROVED BY THE PARK CITY BUILDING DEPARTMENT AND THE PUBLIC UTILITIES ENGINEER. DESIGN AND CONSTRUCTION SHALL COMPLY WITH APPLICABLE BUILDING AND PLUMBING CODES.
3. BACKFLOW PREVENTION: PROVIDE A DOUBLE CHECK BACKFLOW ASSEMBLY (DC) ON THE FIRE SPRINKLER RISER ASSEMBLY. REDUCED PRESSURE PRINCIPLE BACKFLOW ASSEMBLY (RP) ALLOWED WITH PUBLIC UTILITIES ENGINEER APPROVAL. STYLE TO BE DETERMINED BY THE BUILDING AND WATER DEPARTMENT BASED ON DEGREE OF HAZARD POSED BY FIRE SPRINKLER PROTECTION SYSTEM. BEFORE A CERTIFICATE OF OCCUPANCY CAN BE ISSUED BY THE BUILDING DEPARTMENT, BACKFLOW ASSEMBLY TESTING FOR PROPER OPERATION (PER CITY REQUIREMENTS BY A CERTIFIED TESTER RECOGNIZED BY THE CITY) IS REQUIRED AND A REPORT SUBMITTED.
4. CONNECTIONS TO THE WATER SYSTEM ARE NOT PERMITTED PRIOR TO THE POTABLE WATER METER ASSEMBLY OR THE FIRE SPRINKLER RISER BACKFLOW ASSEMBLY. THIS INCLUDES OUTSIDE IRRIGATION SUPPLY.
5. CLEARANCES: PROVIDE ADEQUATE CLEARANCES FROM FIRE RISER AND AROUND WATER METER ASSEMBLY. MAINTAIN: 9” MINIMUM FROM WALL TO FACE OF POTABLE WATER PIPING
   18” CLEAR ON EACH SIDE OF METER ASSEBLY
   36” CLEAR IN FRONT OF METER ASSEMBLY
6. LOCATE METER ASSEMBLY TWO (2) TO FOUR (4) FEET ABOVE THE FLOOR. POSITION METER HORIZONTAL WITH DIAL POINTING UP.
7. VERIFY METER LAY LENGTH WITH WATER DEPARTMENT PRIOR TO INSTALLING PIPING
8. PROVIDE ISOLATION VALVES AT METER INLET AND OUTLET
9. FOR MULTIPLE METERS PROVIDE A MANIFOLD WITH A MAIN VALVE PRIOR TO THE MANIFOLD AND INDIVIDUAL VALVES LOCATED PRIOR TO AND AFTER METERS.
10. PROVIDE A FLOOR DRAIN IN THE FIRE RISER ROOM WITHIN 10 FEET OF THE WATER METER LOCATION.
11. PROVIDE PIPE LABELS ON THE POTABLE WATER LINE BETWEEN THE FIRE RISER AND THE WATER METER DESIGNATING PIPE AS “POTABLE WATER”.
12. PROVIDE PIPE ANCHORAGE TO SUPPORT METER ASSEMBLY INDEPENDENT OF THE POTABLE WATER SUPPLY PIPING AND BUILDING PLUMBING. PROVIDE PIPE STANDS OR UNISTRUT WALL STANDOFFS. DO NOT SUPPORT METER ASSEMBLY FROM OTHER PIPING.
13. PROVIDE A WALL PENETRATION AND CONDUIT FOR REMOTE RADIOREAD METER TRANSEIVER UNIT (MXU) DEVICE(S). COORDINATE ROUTING AND WALL PENETRATION LOCATION WITH THE WATER DEPARTMENT. REFERENCE WATER STANDARD PLANS 520 AND 530.
14. PROVIDE 1/2” EMT CONDUIT AND SUPPORTS FOR MXU SIGNAL WIRE IF DISTANCE TO WALL PENETRATION EXCEEDS 10 FEET.
15. INSPECTION: CONTACT THE CITY ENGINEER FOR INSPECTION OF THE POTABLE WATER SYSTEM METER ASSEMBLY INSTALLATION.
16. REFER TO STD. PLAN 500 AND THE SPECIFICATIONS FOR FLUSHING, HYDROSTATIC TESTING, AND DISINFECTING REQUIREMENTS
17. BUILDING OWNER IS RESPONSIBLE TO HAVE THE BACKFLOW PREVENTER FLOW TESTED AND INSPECTED INTERNALLY AT LEAST ONCE PER YEAR, OR MORE AS CONDITIONS WARRANT, IN ACCORDANCE WITH NFPA 13 AND NFPA 25 AND A REPORT SUBMITTED TO THE PARK CITY BUILDING DEPARTMENT

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2014 REV. 0	**REMOTE MXU DEVICE**	STD. PLAN **530**

DETAIL NOTES:

1. USE OF A PCMC FIRE HYDRANT FOR OBTAINING CONSTRUCTION WATER REQUIRES A VALID CUSTOMER WATER SERVICE AGREEMENT. THE AGREEMENT CAN BE OBTAINED FROM THE PUBLIC WORKS DEPARTMENT. A DEPOSIT FEE IS REQUIRED.

2. CONTRACTOR (CUSTOMER) IS RESPONSIBLE TO PICK UP THE PCMC PROVIDED HYDRANT METER ASSEMBLY FROM THE PUBLIC WORKS DEPARTMENT. COORDINATE PICK UP 24 HOURS PRIOR TO ARRIVAL.

3. CONTRACTOR SHALL BE RESPONSIBLE TO INSTALL AND NOTIFY THE PARK CITY FIRE SERVICE DISTRICT OFFICE OF THE HYDRANT CONNECTION.

4. FULLY OPEN THE FIRE HYDRANT VALVE PRIOR TO OPERATION. DO NOT USE THE FIRE HYDRANT VALVE FOR THROTTLING, USE THE BACKFLOW ASSEMBLY VALVE. DO NOT CLOSE VALVES ON THE ASSEMBLY OR THE DISCHARGE LINE QUICKLY.

5. CONTRACTOR SHALL PROTECT THE HYDRANT METER ASSEMBLY FROM DAMAGE, THEFT, AND MISUSE.

6. CONTRACTOR IS RESPONSIBLE FOR ANY AND ALL WATER CONSUMPTION.

7. CONTRACTOR SHALL NOTIFY PCMC WATER DEPARTMENT AND REMOVE AND RETURN THE HYDRANT METER ASSEMBLY WHEN HYDRANT USE IS COMPLETE. RELOCATION OF THE HYDRANT METER ASSEMBLY REQUIRES PRIOR NOTIFICATION TO THE WATER DEPARTMENT AND A MODIFICATION TO THE CUSTOMER SERVICE AGREEMENT.

8. CONTRACTOR IS RESPONSIBLE FOR ANY AND ALL DAMAGE TO METER AND HYDRANT WHILE IN USE.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2023 REV. 2	**TEMPORARY HYDRANT METER ASSEMBLY**	STD. PLAN **531**

PCMC WATER SYSTEM – CORROSION PROTECTION REQUIREMENTS:

PCMC HAS EXPERIENCED EXTERNAL CORROSION OF WATER DISTRIBUTION MATERIALS IN VARYING DEGREES THROUGHOUT THE CITY. TO MAXIMIZE THE LIFE CYCLE OF WATER SYSTEM IMPROVEMENTS, AS IMPACTED BY THE IMMEDIATE SITE CONDITIONS AND THE SELECTION OF MATERIALS, THE CITY HAS IDENTIFIED KEY DESIGN AND CONSTRUCTION REQUIREMENTS.

1. **FOR PROJECTS WITH LESS THAN 300 FEET OF NEW WATER PIPE** AND APPURTENANCES, CORROSION PROTECTION SHALL BE ADDRESSED IN THE FOLLOWING MANNER:
   a. IN ADDITION TO THE REQUIRED POLYETHYLENE WRAP, APPLY A WAX TAPE COATING SYSTEM TO VALVE BONNET BOLTS,SADDLES, CORP STOPS, STAINLESS REPAIR CLAMPS AND ALL OTHER BURIED BOLTS, NUTS, CONNECTORS, RESTAINER GLAND BOLTS, AND COUPLING HARDWARE, AWWA C217. COATING SYSTEM TO INCLUDE A 4-MIL MINIMUM WAX TAPE PRIMER, FILLER MATERIAL, 45-MIL MINIMUM WAX TAPE AND PROTECTIVE OUTER WRAP. WHEN WAX TAPING A STAINLESS CLAMP THE ENTIRE CLAM SHOULD BE WRAPPED NOT JUST BOLTS.
   b. WAX TAPE COATING MATERIALS:
      i. DENSO NORTH AMERICA DENSO PRIMER, DENSYL TAPE AND/OR MASTIC, DENSO FIBER-WRAP
      ii. TRENTON PRIMER, #1 WAX-TAPE, AND GUARD-WRAP
      iii. OR APPROVED EQUAL (SUBMITTAL TO CITY AND WRITTEN APPROVAL REQUIRED PRIOR TO INSTALLATION)

2. **FOR PROJECTS EXCEEDING 300 FEET OF NEW WATER PIPE** AND APPURTENANCES, CORROSION PROTECTION SHALL BE ADDRESSED IN THE FOLLOWING MANNER:

   a. THE DEVELOPER AND ITS' DESIGN ENGINEER, GEOTECHNICAL ENGINEER, AND CORROSION CONSULTANT SHALL PROVIDE A SITE SPECIFIC "CORROSION STUDY REPORT". THE REPORT SHALL INCORPORATE PROJECT SPECIFIC FINDINGS INTO CORROSION PROTECTION RECOMMENDATIONS FOR THE PROPOSED WATER SYSTEM IMPROVEMENTS. THE REPORT SHALL INCLUDE AT A MINIMUM THE FOLLOWING ITEMS:

      i. DETAILED INFORMATION ON EXISTING CONDITIONS, SOIL TYPES, CLASSIFICATION, ETC.
      ii. IDENTIFICATION OF STRAY CURRENT SOURCES AND ANY EXISTING CORROSION PROTECTION SYSTEMS IN THE IMMEDIATE AREA
      iii. IDENTIFICATION OF ANY POTENTIAL FOR HOT SPOTS OR VARYING SOIL CONDITIONS THAT MAY WARRANT CHANGES TO THE CORROSION PROTECTION PLAN DURING CONSTRUCTION.
      iv. FIELD SAMPLING AND TESTING RESULTS WITHIN THE PROPOSED PIPE ZONE BASED ON REPRESENTATIVE SAMPLING OF THE DEVELOPMENT AREA CONDITIONS
      v. SOIL RESISTIVITY TESTING RESULTS IDENTIFYING CORROSIVE SOIL CONDITIONS AND LOCATIONS (WENNER 4-PIN SOIL RESISTIVITY TESTS AND SOIL BOX RESISTIVITY TESTS) AT REPRESENTATIVE PIPE INSTALL DEPTHS
      vi. LABORATORY ANALYSIS OF SOIL SAMPLES FOR PH, CHLORIDES, SULFATES, TOTAL SALTS, AND CONDUCTIVITY
      vii. DETERMINATION OF THE NEED FOR CORROSION PROTECTION BASED ON SOIL CORROSIVITY CLASSIFICATION/SOIL RESISTIVITY AND RECOMMENDATION OF SUITABLE PIPE, CONSTRUCTION MATERIALS, PIPE PROTECTION METHOD, PIPE EXTERIOR COATINGS, ETC., BASED ON SITE CORROSIVITY. SEE TABLE BELOW.
      viii. SPECIFY IF THE INVESTIGATION INCLUDES ONLY THE INITIAL PHASE OR ALL FUTURE PHASES

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	**DATE** 10/2020 **REV.** 1	**METALLIC PIPE CORROSION PROTECTION**	**STD. PLAN** **534.1**

b. FOLLOWING PCMC'S RECEIPT AND REVIEW OF THE CORROSION STUDY REPORT, THE DEVELOPER WILL BE NOTIFIED OF THE CITY'S DETERMINATION AS TO REQUIRED PROTECTION OR THE DESIGN TEAM WILL BE REQUESTED TO MEET AND REVIEW THE FINDINGS AND ESTABLISH THE FINAL WATER SYSTEM DESIGN CRITERIA. THE CITY'S REVIEW WILL BE BASED ON THE FOLLOWING TABLE 1:

TABLE 1 - SOIL CORROSIVITY CLASSIFICATION VERSUS SOIL RESISTIVITY

CORROSIVITY	RESISTIVITY, OHM-CM	TREATMENT
EXTREMELY CORROSIVE	LESS THAN 1,000	SITE SPECIFIC DESIGN REQUIRED
VERY CORROSIVE	1,000 TO 3,000	SITE SPECIFIC DESIGN REQUIRED
CORROSIVE	3,000 TO 6,000	NON-METALLIC PIPE – WAX TAPE COATING SYSTEM ON BOLTS & NUTS, ANODE PROTECTED FITTINGS AND VALVES
MODERATELY CORROSIVE	6,000 TO 10,000	NON-METALLIC PIPE - WAX TAPE COATING SYSTEM ON BOLTS AND NUTS ON PIPE, FITTINGS, AND VALVES
MILDLY CORROSIVE	MORE THAN 10,000	WAX TAPE COATING SYSTEM ON BOLTS AND NUTS ON PIPE, FITTINGS, AND VALVES *ALWAYS REQUIRED UNLESS SOILS TESTING IS PROVIDED

c. REFER TO PERTINENT PCMC WATER STANDARD PLANS OR PROVIDE CONSTRUCTION DRAWING DETAILS ASSOCIATED WITH CORROSION STUDY RECOMMENDATIONS AND THE PCMC FINAL APPROVED WATER SYSTEM

WAX TAPE INSTALLATION PROCEDURES

WIRE BRUSH AND SCRAPE THE SURFACE CLEAN OF DIRT, LOOSE COATING AND LOOSE RUST. APPLY A THIN FILM OF WAX-TAPE® PRIMER. IF THE SURFACE IS WET, COLD OR RUSTY, RUB AND PRESS ON PRIMER TO DISPLACE MOISTURE AND ENSURE ADHESION. THEN WRAP WAX-TAPE WRAP USING A 1″ OVERLAP. ON STRAIGHT PIPE APPLY SLIGHT TENSION TO ENSURE CONTACT WITH SURFACE. ON IRREGULAR SURFACES ALLOW SLACK SO THE WRAP CAN BE MOLDED INTO CONFORMITY. IN EITHER CASE, PRESS AND FORM THE WRAP SO THERE ARE NO AIR POCKETS OR VOIDS UNDER THE WRAP. ALSO, PRESS AND SMOOTH OUT THE LAP SEAMS TO ENSURE THEY ARE SEALED AND APPLY OUTERWRAP. THE WRAP DOES NOT REQUIRE CURING OR DRYING TIME SO IT CAN BE BACKFILLED IMMEDIATELY.

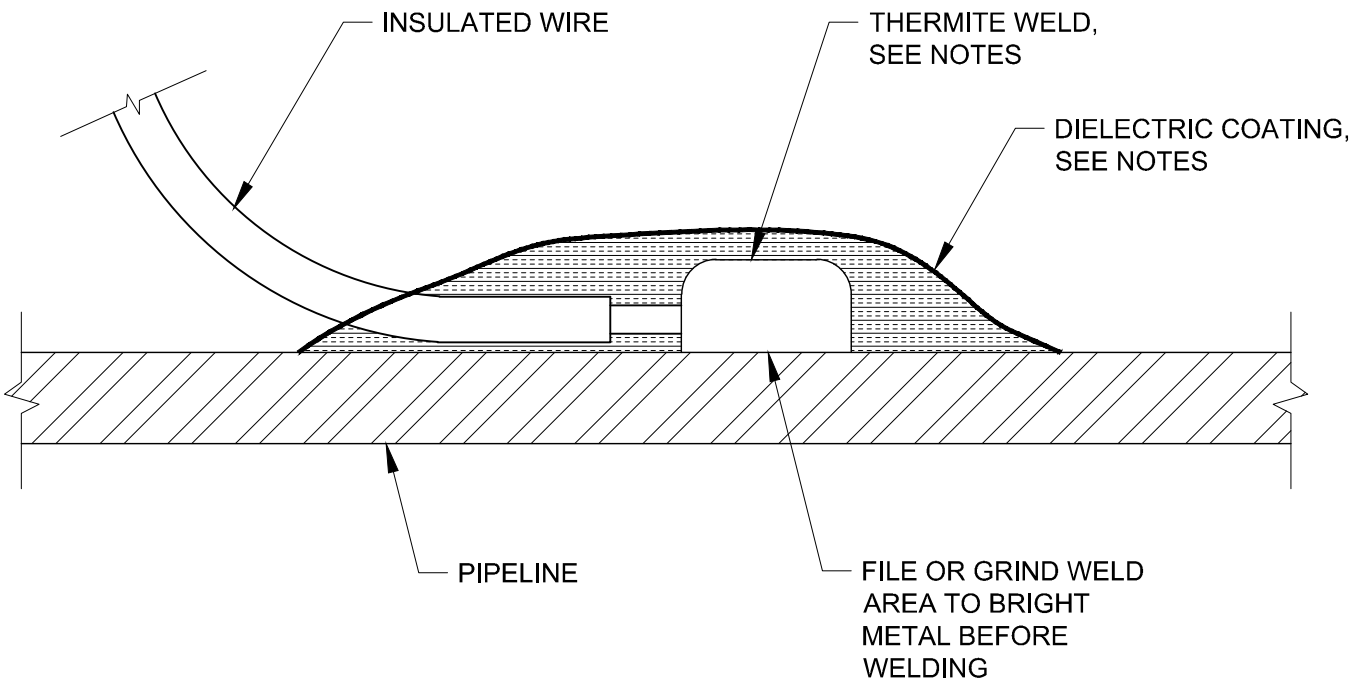
0		



NOTES:

1. MAKE WIRE CONNECTION TO PIPE AT FIELD JOINT WHERE HOLDBACK OCCURS ON PIPELINE COATING.

2. MAINTAIN SEPARATION BETWEEN MULTIPLE TEST WIRE CONNECTIONS OF ONE PIPE DIA OR 24", WHICHEVER IS LESS.

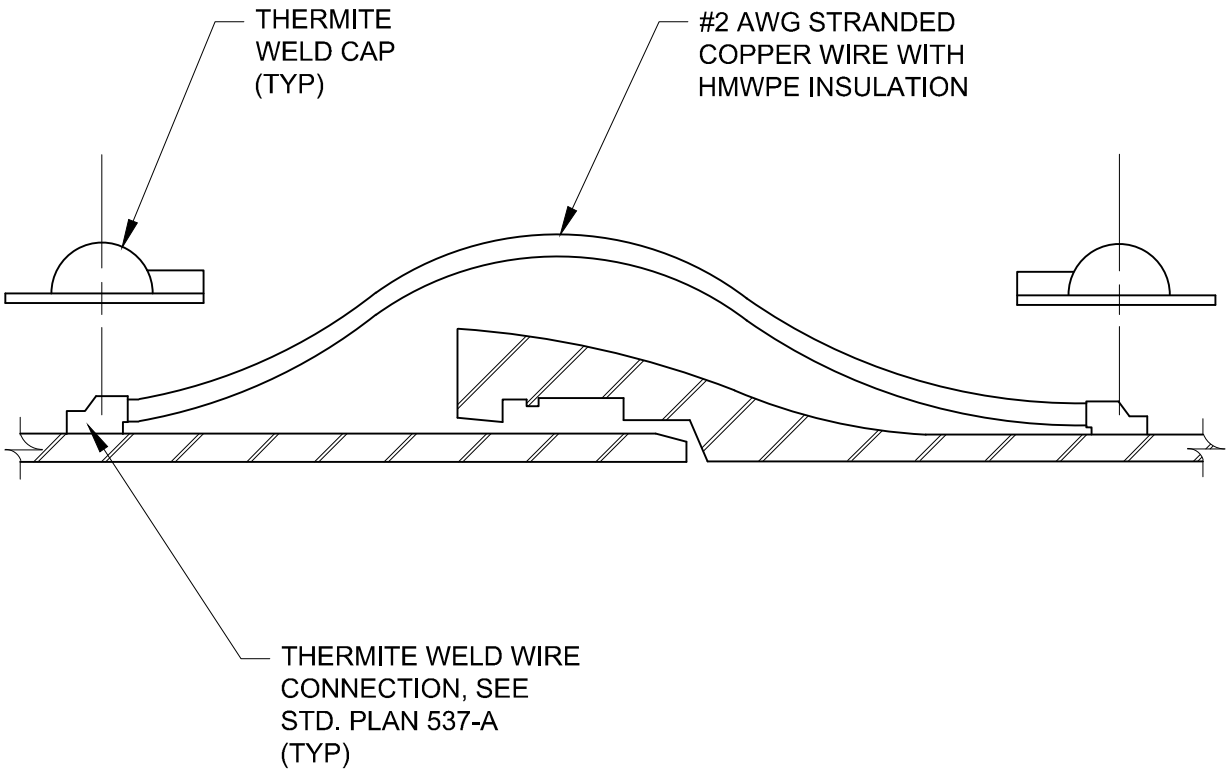
3. COPPER SLEEVE REQUIRED FOR #2 AWG JOINT BONDS OR FOR #12 AWG OR SMALLER TEST WIRES.

4. WELDER AND CARTRIDGE SIZE VARIES ACCORDING TO PIPE SIZE AND PIPE MATERIAL, CONSULT WELDER MANUFACTURER FOR RECOMMENDED WELDER AND CARTRIDGE.

5. COAT COMPLETED CONNECTIONS, SEE STD PLAN 537-G.

6. PIPELINE JOINT COATING NOT SHOWN FOR CLARITY.

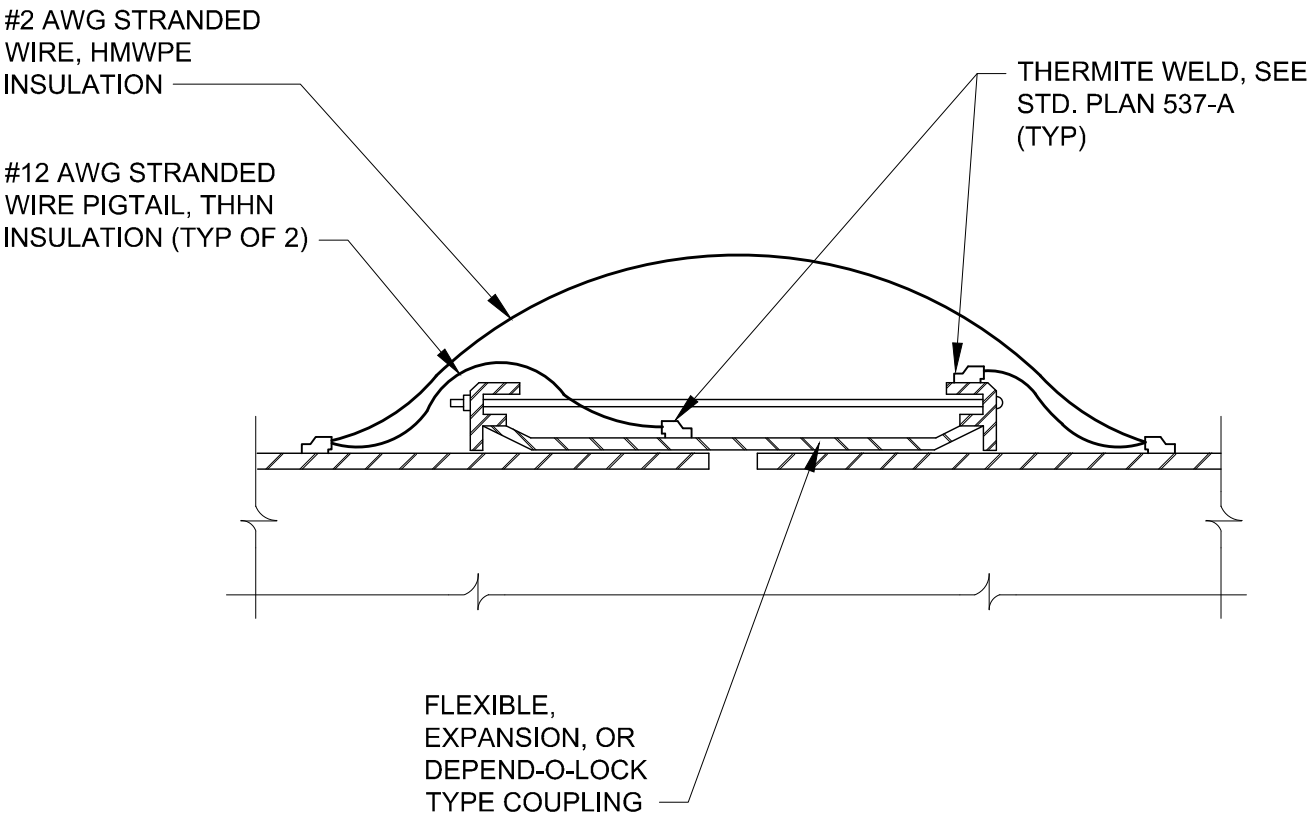
PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 04/2014 REV. 0	**STEEL AND DUCTILE IRON PIPE WIRE CONNECTION**	STD. PLAN **537-A**



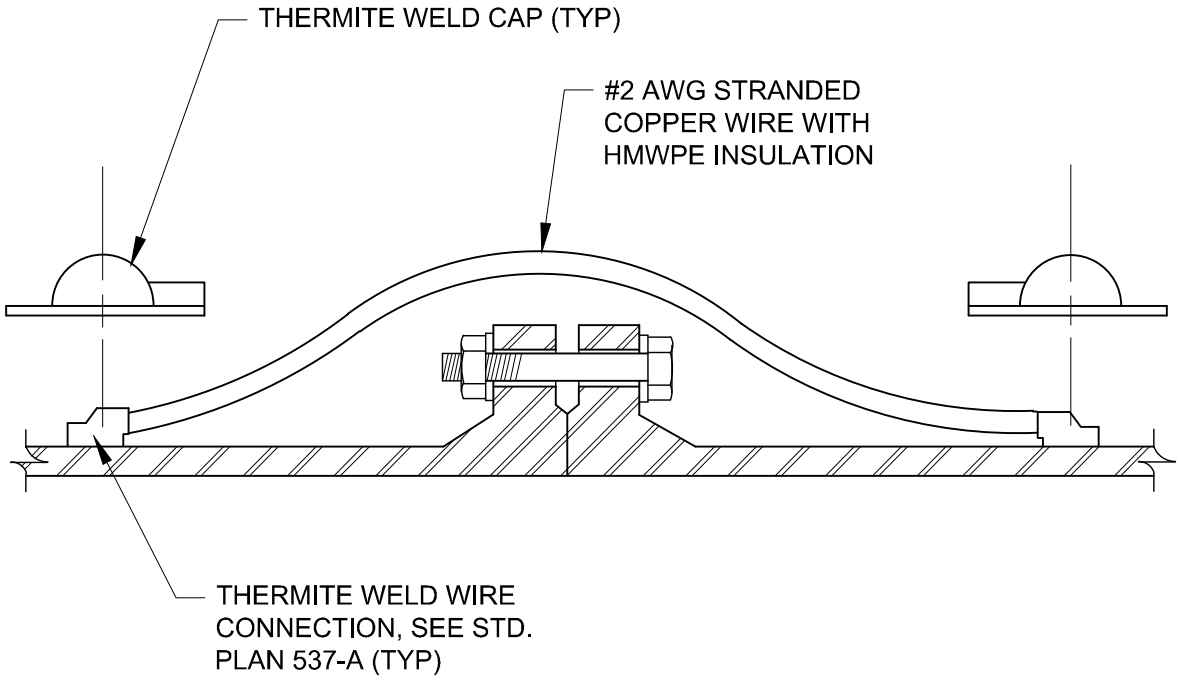
NOTES:

1. PUSH ON DUCTILE IRON BOND SHOWN, SIMILAR FOR DUCTILE MECHANICAL AND RESTRAINED JOINTS, AND STEEL CARNEGIE JOINTS.
2. INSTALL 2 BOND WIRES AT EACH PIPE JOINT, UNLESS SPECIFIED OTHERWISE.
3. COAT THERMITE WELDS WITH THERMITE WELD CAP OR FAST CURE EPOXY AT CONTRACTOR'S OPTION.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 12/2013 REV. 0	**DUCTILE IRON PIPE JOINT BOND**	STD. PLAN **537-B**

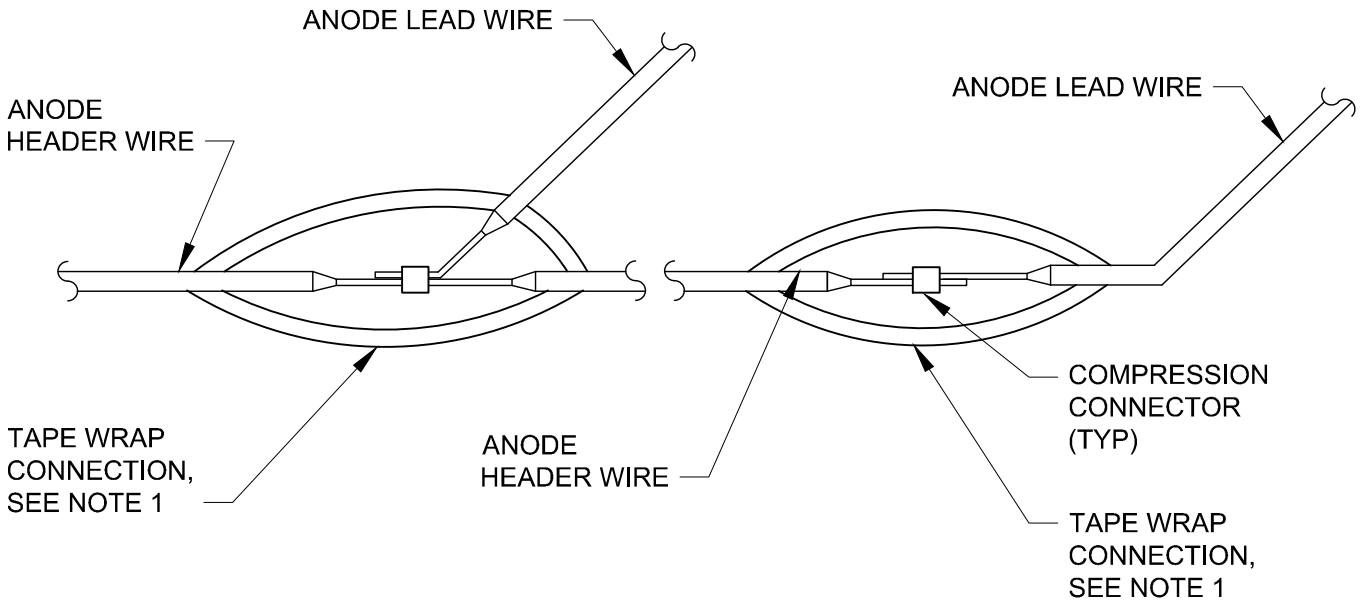


PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 12/2013 REV. 0	**FLEXIBLE JOINT BOND**	STD. PLAN **537-C**



NOTE:
INSTALL TWO BOND WIRES AT EACH PIPE JOINT.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 12/2013 REV. 0	**FLANGED AND MECHANICAL JOINT BOND**	STD. PLAN **537-D**

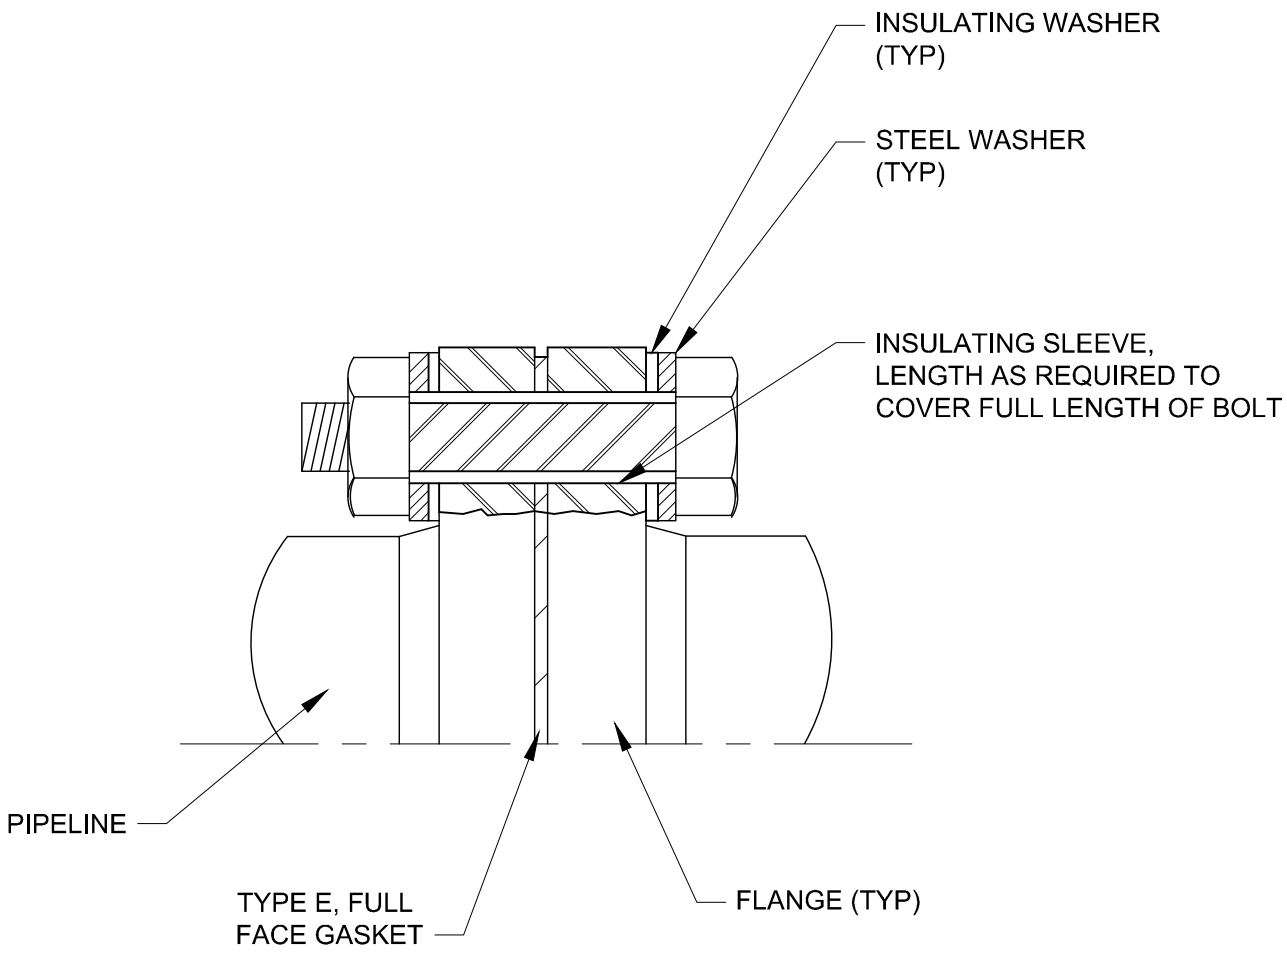


NOTES:

1. FILL VOIDS AND IRREGULARITIES WITH INSULATING PUTTY, WRAP CONNECTION WITH TWO LAYERS OF SCOTCH 130C SELF VULCANIZING RUBBER TAPE AND TWO LAYERS OF SCOTCH 88 VINYL ELECTRICAL TAPE.

2. DETAIL SIMILAR FOR ANODE HEADER WIRE SPLICES, SIZE COMPRESSION CONNECTORS AS REQUIRED.

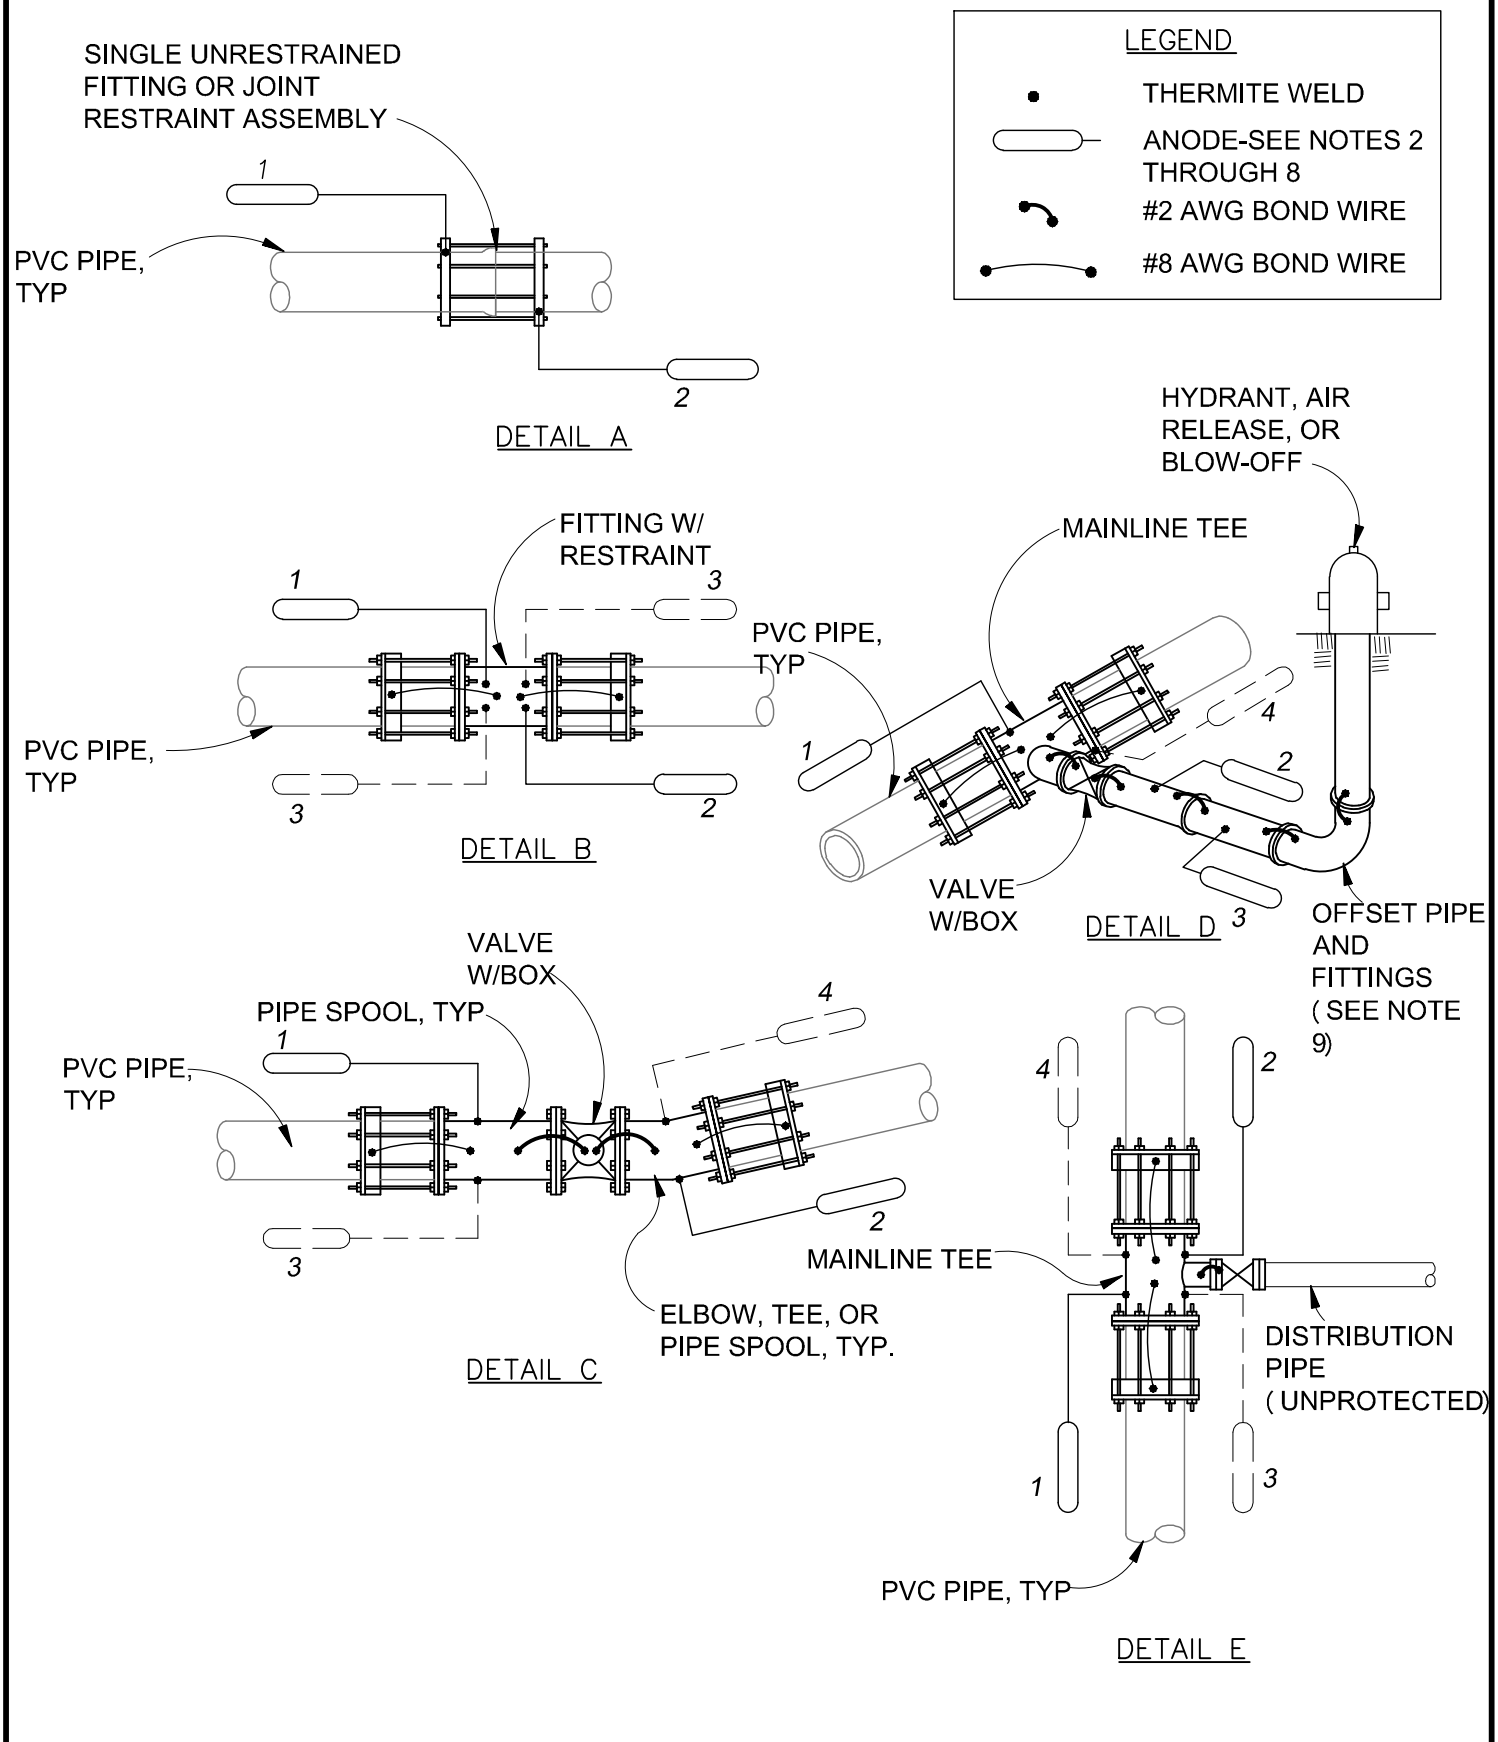
PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 12/2013 REV. 0	**GALVANIC ANODE WIRE SPLICE**	STD. PLAN **537-E**



NOTES:

1. DOUBLE INSULATING WASHERS SHOWN FOR NON-BURIED INSULATING FLANGE INSTALLATIONS.
2. FOR BURIED OR SUBMERGED INSULATING FLANGE INSTALLATION USE SINGLE INSULATING WASHER ON UNPROTECTED SIDE OF INSULATING FLANGE.
3. COAT INTERIOR OF MORTAR LINED PIPE FOR TWO PIPE DIAMETERS WITH NSF APPROVED EPOXY AT 20 MILS DFT.
4. COAT BURIED OR IMMERSED INSULATING FLANGES WITH SPECIFIED PIPELINE DIELECTRIC JOINT COATING OR HEAT SHRINK SLEEVE WITH MORTAR OVERCOAT ON MLC STEEL PIPE.
5. TEST COMPLETED JOINT FOR ELECTRICAL ISOLATION AND REPAIR AS REQUIRED.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 12/2013 REV. 0	**INSULATING FLANGE**	STD. PLAN **537-F**



PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 4/2014 REV. 0	**METALLIC PIPE APPURTENANCE AND FITTING CATHODIC PROTECTION**	STD. PLAN **537-G.1**

NOTES:

1. APPLY DIELECTRIC COATING TO ALL METALLIC FITTINGS, VALVES, PIPE, AND VALVE BOXES UNLESS SPECIFIED OTHERWISE.

2. GALVANIC ANODES SHALL BE H1 ALLOY MAGNESIUM ANODES AT THE BARE WEIGHT LISTED IN THE SCHEDULE, SUPPLY PREPACKAGED IN A CLOTH BAG AT 2.5 TIMES BARE WEIGHT IN 75% GYPSUM, 20% BENTONITE, AND 5% SODIUM SULFATE BACKFILL WITH MANUFACTURER'S STANDARD 10-FOOT LONG, NO. 12 AWG LEAD WIRE.

3. INSTALL ANODES IN PIPE TRENCH APPROXIMATELY 2 FEET FROM THE FITTING WHERE POSSIBLE, BUT NOT CLOSER THAN 12-INCHES FROM THE METALLIC FITTING.

4. ANODE PLACEMENT IS INDICATED BY NUMBER NEXT TO EACH ANODE SHOWN IN DETAILS, FIRST ANODE IS PLACED AT ONE, SECOND AT TWO, ETC.

5. LOCATE MULTIPLE ANODES AT EQUAL SPACING ALONG PIPE FITTING ASSEMBLY AND ON OPPOSITE SIDES OF PIPE WHEN MORE THAN FOUR ANODES ARE REQUIRED.

6. 32-LB GALVANIC ANODES MAY BE SUBSTITUTED FOR 17-LB ANODES AT THE CONTRACTOR'S OPTION, BUT THE TOTAL QUANTITY OF ANODES REQUIRED WILL NOT CHANGE.

7. ANODE QUANTITY AND BARE WEIGHT REQUIRED FOR SOME PIPE AND FITTING COMBINATIONS ARE LISTED IN THE SCHEDULE.

8. ADDITIONAL ANODES ARE REQUIRED ON METALLIC PIPE ASSEMBLIES THAT EXCEED THE MAXIMUM COMBINED LENGTH LISTED IN THE SCHEDULE FOR ALL FITTINGS, VALVES, PIPE SPOOLS, AND OTHER METALLIC APPURTENANCES IN THE ASSEMBLY, EXCLUDING THRUST RESTRAINT, ADD ONE ANODE FOR EACH EXTRA PIPE LENGTH AND ONE ANODE FOR FRACTIONAL EXTRA PIPE LENGTH TO THE LISTED QUANTITY OF ANODES.

9. PIPE ASSEMBLIES FOR BLOW-OFFS, AIR RELEASE, AND FIRE HYDRANTS ARE BASED ON STANDARD CONSTRUCTION DETAILS AND INCLUDES ONE RESTRAINED MAINLINE TEE FITTING AND ALL OFFSET PIPE, FITTINGS, AND RISERS AS SHOWN ON THE APPLICABLE CONSTRUCTION DETAILS, ADDITIONAL ANODES ARE REQUIRED FOR - 1) OFFSET PIPE LENGTH IN EXCESS OF THE MAXIMUM COMBINED LENGTH FOR THE OFFSET PIPE DIAMETER, AND 2) ADDITIONAL ANODES REQUIRED FOR EXTRA MAINLINE PIPE FITTINGS.

10. BOND ALL ADJACENT FITTING JOINTS WHERE MULTIPLE METALLIC FITTINGS ARE INSTALLED TOGETHER WITH JOINT BONDS AS SHOWN IN DETAIL 711-L,M,N.

11. BOND WIRES SHALL BE STRANDED COPPER WIRE WITH THHN INSULATION, USE NO. 2 AWG WIRE FOR BONDING OF PIPE OR FITTING JOINTS, USE NO. 8 AWG WIRE FOR BONDING FOLLOWER RINGS AND RESTRAINED JOINT RINGS TO FITTING AS SHOWN.

12. COAT ALL THERMITE WELDS, PIPE, AND EXPOSED COPPER WIRE WITH SCOTCHKOTE 206P THERMOPLASTIC PATCH MELT STICK COATING, THERMITE WELD CAP, OR COATING SYSTEM AS SPECIFIED.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 4/2014 REV. 0	**METALLIC PIPE APPURTENANCE AND FITTING CATHODIC PROTECTION**	STD. PLAN **537-G.2**

13. COATING MATERIAL FOR METALLIC PIPE AND FITTINGS

A. GENERAL:

1. ALL METALLIC FITTINGS AND METALLIC HARDWARE ASSOCIATED WITH NON-METALLIC PIPE CONSTRUCTION SHALL BE DIELECTRICALLY COATED WITH A BONDED COATING.

2. PREPARE SURFACE OF ITEMS TO BE COATED IN ACCORDANCE WITH COATING MANUFACTURER'S REQUIREMENTS.

B. DIELECTRIC COATING SYSTEMS FOR METALLIC PIPE, FITTINGS, AND APPURTENANCES

1. WAX TAPE COATING SYSTEM

a. METALLIC PIPING, FITTINGS, AND APPURTENANCES SHALL BE COATED IN ACCORDANCE WITH AWWA C217.

b. APPLY COATING SYSTEM TO ALL BURIED METALLIC PIPE APPURTENANCES, INCLUDING JOINTS, FITTINGS, BOLTS, AND IRREGULARLY SHAPED SURFACES.

c. FILLER MATERIAL:

(1) SHALL BE COMPRISED OF SATURATED PETROLEUM HYDROCARBONS (PETROLATUM) INERT FILLERS, REINFORCING FIBERS AND THERMAL EXTENDERS. VARIATIONS MAY CONTAIN BEADS OF CELLULAR POLYMER AND FLOW CONTROL ADDITIVES.

(2) WAX SHALL BE COLD APPLIED SELF SUPPORTING MASTICS FOR MOLDING AROUND IRREGULAR SHAPED FITTINGS TO PROVIDE A SUITABLE PROFILE FOR APPLYING ANTI-CORROSION TAPES.

d. TAPE COATING

(1) COMPOSED OF A NON-WOVEN SYNTHETIC FABRIC CARRIER, FULLY IMPREGNATED WITH A NEUTRAL COMPOUND BASED ON SATURATED PETROLEUM COMPOSED OF INERT SILICEOUS FILLERS. APPLY COATING IN ACCORDANCE WITH AWWA C217, EXCEPT AS MODIFIED HEREIN.

e. PROTECTIVE OUTER WRAP

(1) PROVIDE FIBER MESH FABRIC OUTER WRAP OVER WAX TAPE RESIN COATED, WOVEN FIBER-MESH FABRIC THAT IS .005 INCHES.

f. ALL COMPONENTS OF THE WAX TAPE COATING SYSTEM SHALL BE FROM A SINGLE MANUFACTURER AS MANUFACTURED BY DENSO NORTH AMERICAN, TRENTON, OR EQUAL.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 4/2014 REV. 0	**METALLIC PIPE APPURTENANCE AND FITTING CATHODIC PROTECTION**	STD. PLAN **537-G.3**

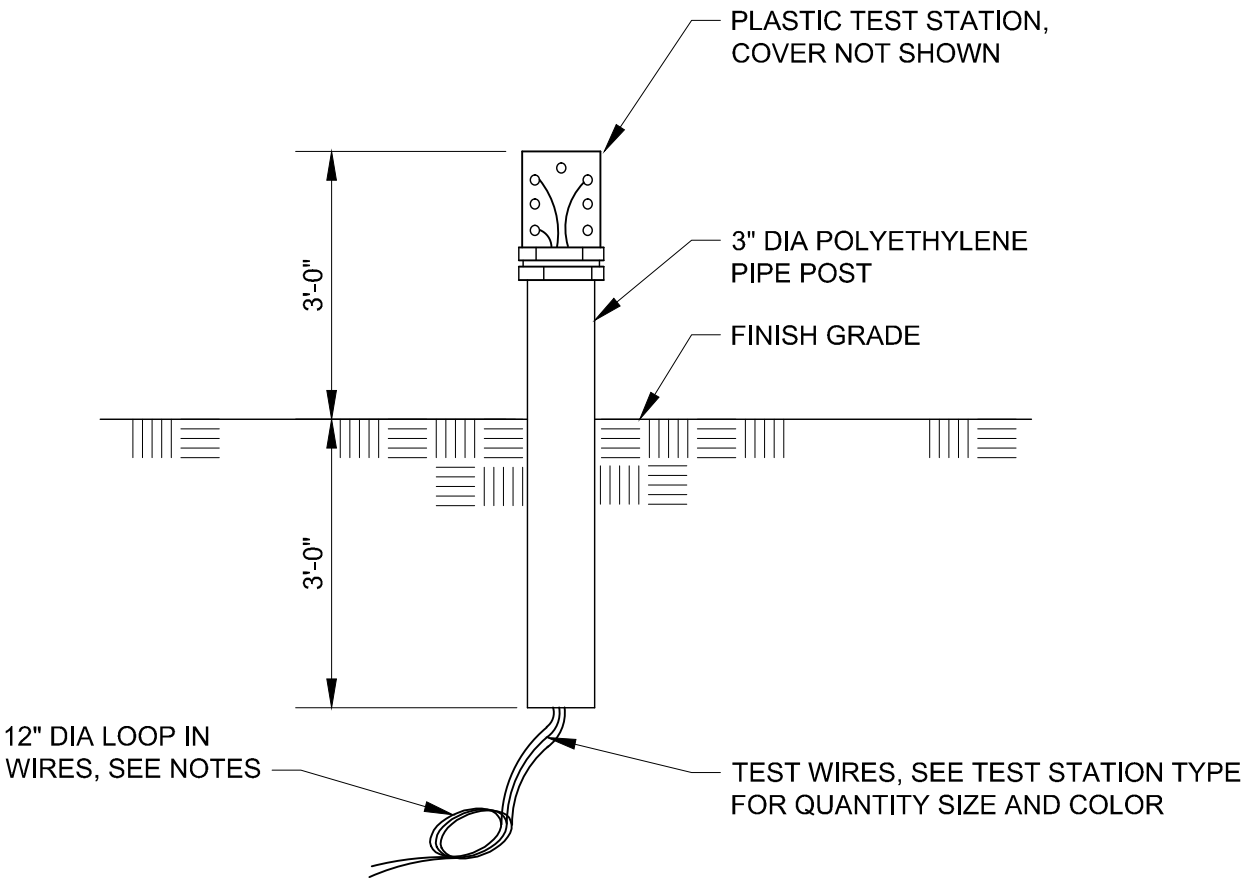
NOTES:

1. TEST STATION TO BE ALUMINUM BODY AND LID WITH THREADED CONNECTION FOR CONDUIT.

2. QUANTITY OF TERMINALS AND WIRING CONNECTIONS VARIES, SEE APPLICABLE TEST STATION DETAILS FOR TYPE OF TEST STATION.

3. PROVIDE WIRE LOP AT BASE OF POST MOUNTED TEST STATION TO MINIMIZE SETTLEMENT STRESSES ON WIRE.

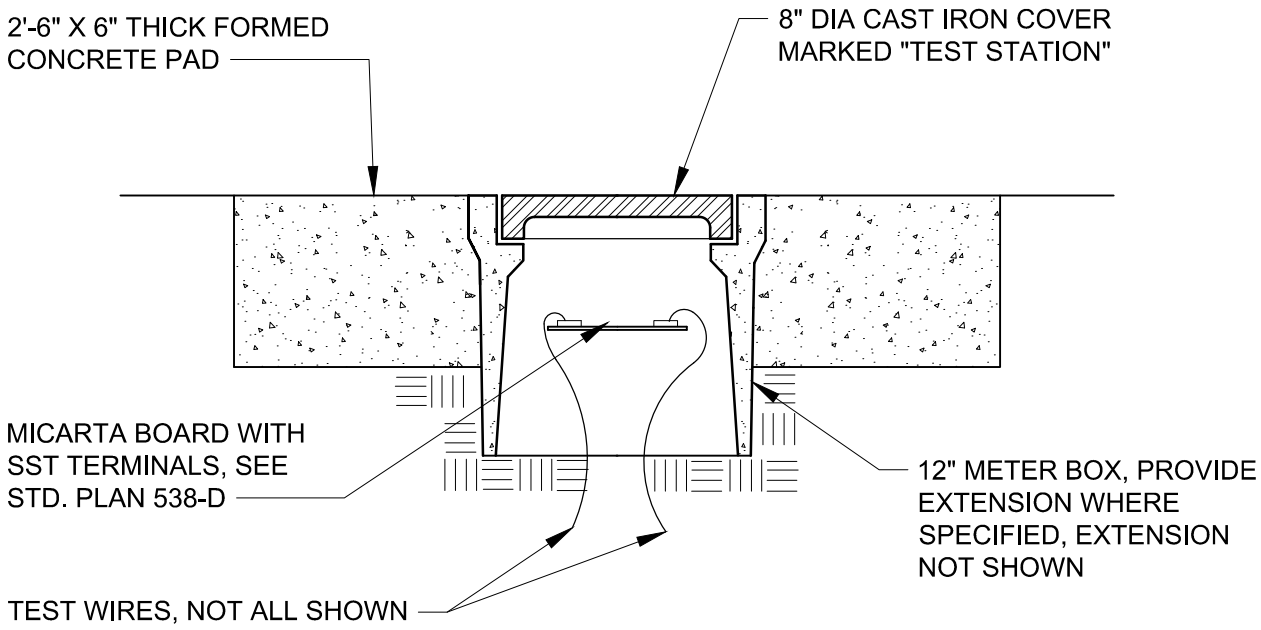
PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2014 REV. 0	**POST STYLE TEST STATION WOOD**	STD. PLAN **538-A**



NOTES:

1. COLOR OR TEST STATION AND POST AS SPECIFIED.
2. QUANTITY OF TERMINALS AND WIRING CONNECTIONS VARIES, SEE APPLICABLE TEST STATION DETAILS FOR TYPE OF TEST STATION.
3. PROVIDE WIRE LOP AT BASE OF POST MOUNTED TEST STATION TO MINIMIZE SETTLEMENT STRESSES ON WIRE

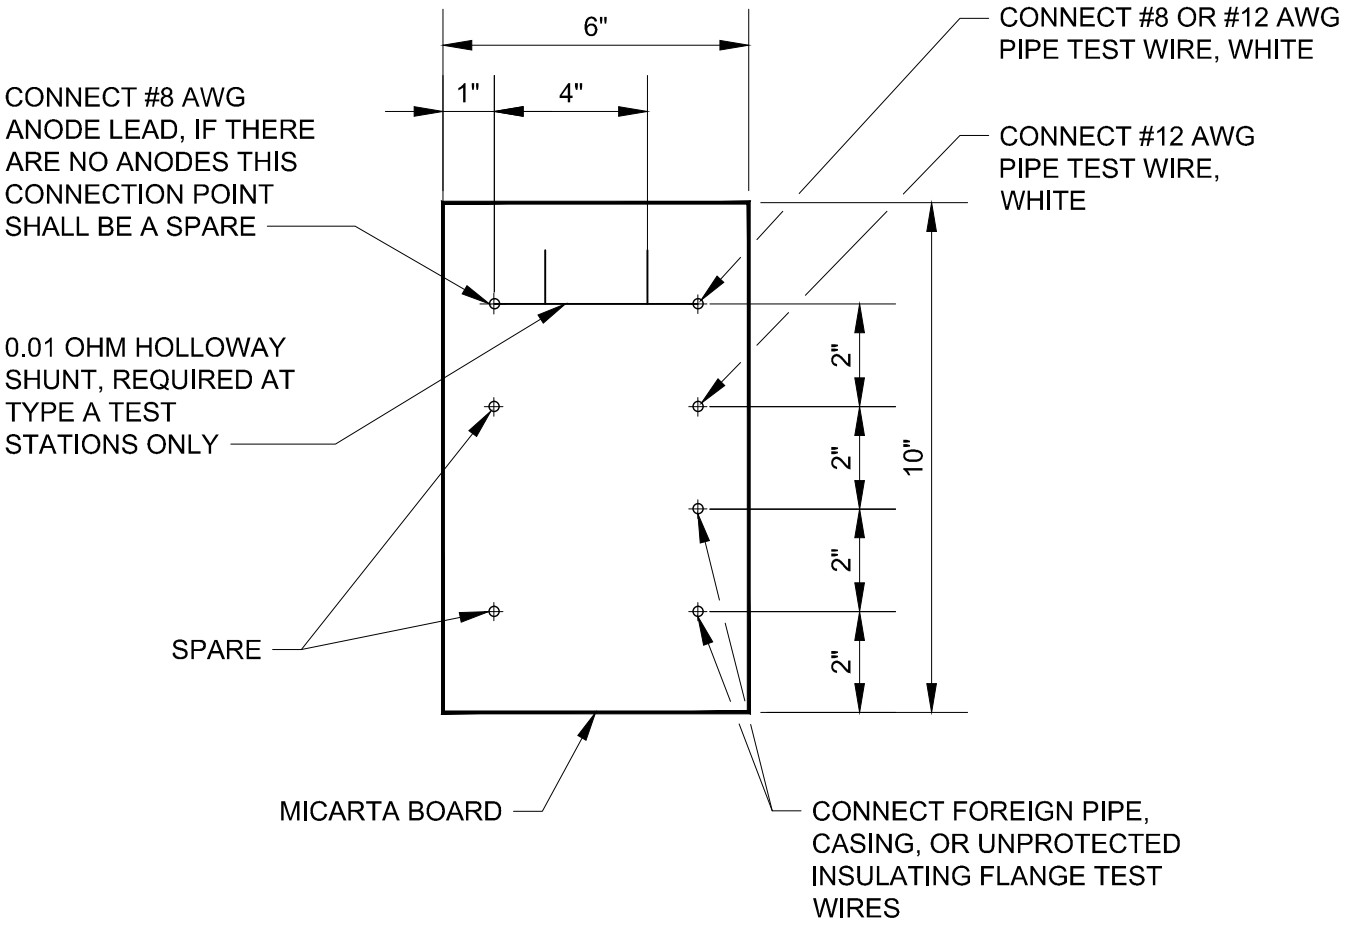
PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2014 REV. 0	**POST STYLE TEST STATION PLASTIC**	STD. PLAN **538-B**



NOTES:

1. COLOR CODE WIRE INSULATION AS SHOWN IN APPLICABLE TEST STATION DETAILS, CONNECT EACH TEST WIRE TO SEPARATE TERMINAL.
2. WIRE CONFIGURATION FOR FLUSH MOUNTED TEST STATIONS SIMILAR TO POST MOUNTED TEST STATIONS.
3. PROVIDE 18 INCHES SLACK IN TEST WIRES, MINIMUM.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2014 REV. 0	**FLUSH STYLE TEST STATION BOX**	STD. PLAN **538-C**



NOTES:

1. TERMINALS SHALL BE 1/4" STAINLESS STEEL WITH LOCKING WASHER, TWO FLAT WASHERS, AND DOUBLE NUTS.

2. ALL WIRE CONNECTIONS TO BE WITH RING TONGUE COMPRESSION TERMINALS.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 02/2014 REV. 0	**FLUSH STYLE TEST STATION TERMINAL BOARD**	STD. PLAN **538-D**

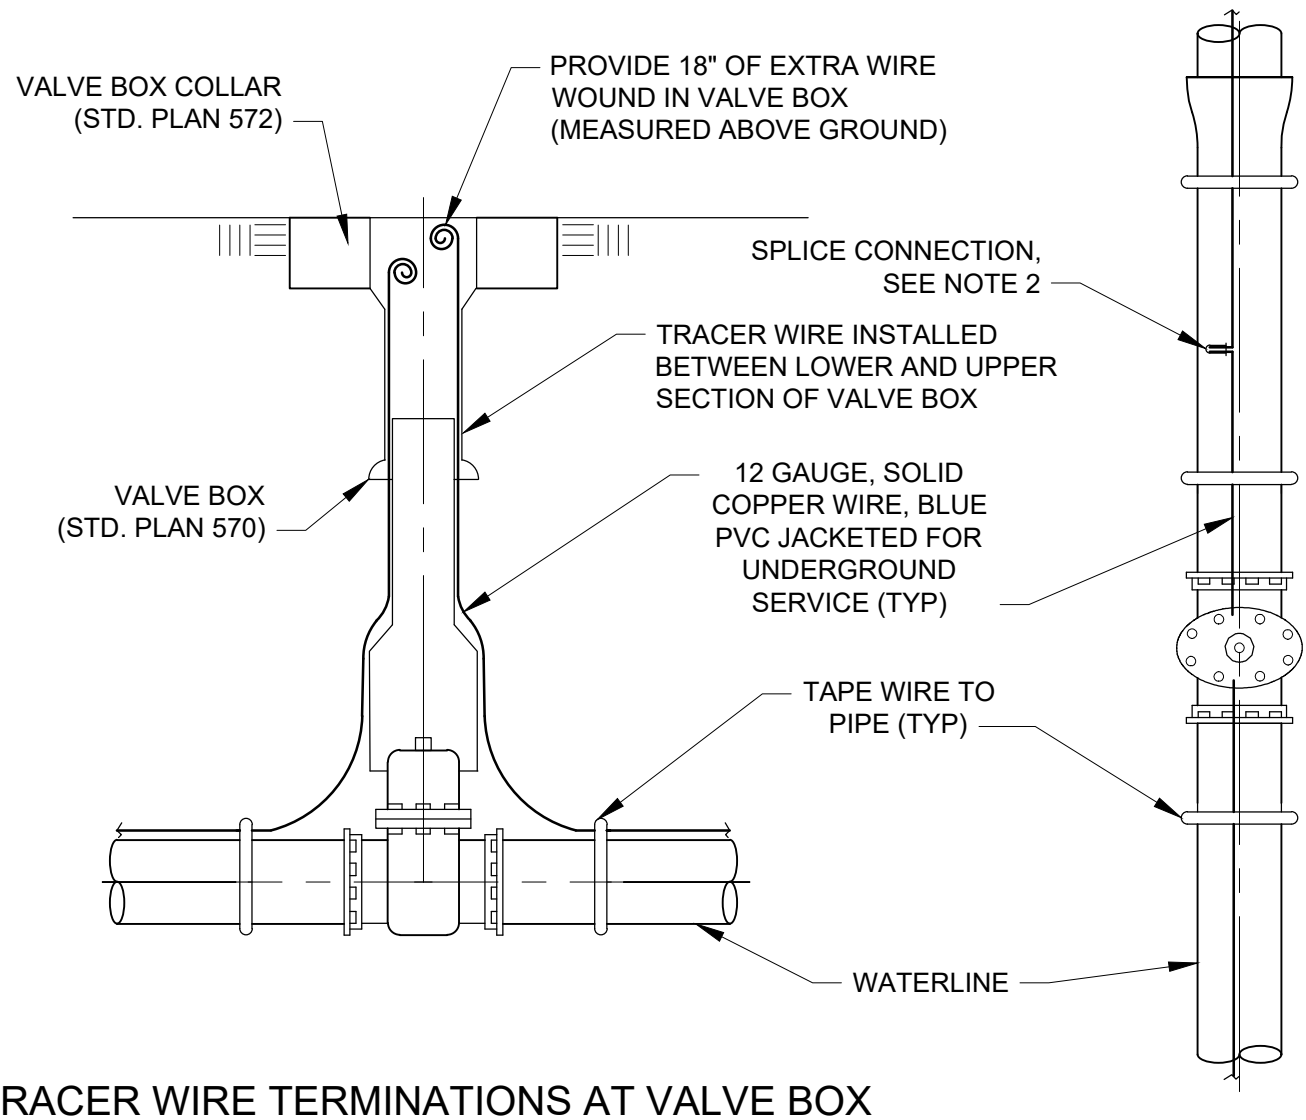
HDPE METHOD

NOTES:

HDPE PIPE WATERLINE LOOP MINIMUM REQUIREMENTS:

1. NO LOOPS TO BE CONSTRUCTED WITHOUT PRIOR APPROVAL FROM PARK CITY PUBLIC UTILITIES ENGINEER. ALL EFFORTS TO AVOID LOOPS SHOULD BE EXHAUSTED AND ONLY USED AS LAST ALTERNATIVE. LOOPS WILL NOT BE APPROVED ON NEW CONSTRUCTION.
2. GENERAL: PIPE SHALL BE HDPE 4710 DR11 WITH AN INSIDE DIAMETER EQUAL TO OR GREATER THAN THE CONNECTING PIPE ON BOTH ENDS.
3. PIPE SHALL BE FUSION WELDED ALONG LENGTH AND FULLY RESTRAINED AT TRANSITIONS TO DIFFERING PIPE MATERIALS WITH FLANGES OR OTHER CITY APPROVED METHOD.
4. FITTINGS ALONG THE LOOP LENGTH SHALL BE HDPE UNLESS OTHERWISE APPROVED BY OWNER.
5. BENDING RADIUS NOT TO EXCEED PIPE MANUFACTURES RECOMMENDATIONS.
6. REDUCERS AND TRANSITION COUPLINGS SHALL BE PROVIDED ON BOTH ENDS AS REQUIRED AND SHALL BE HDPE OR DUCTILE IRON. CATHODIC PROTECTION REQUIRED ON FERROUS COMPONENTS PER STD. PLAN 534
7. ALL CULINARY WATER MAINS AND LATERALS SHALL BE INSTALLED ABOVE SEWER LINES UNLESS APPROVED BY PARK CITY AND UTAH DIVISION OF DRINKING WATER.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2024 REV. 2	**WATER MAIN LOOP**	STD. PLAN **544-C**

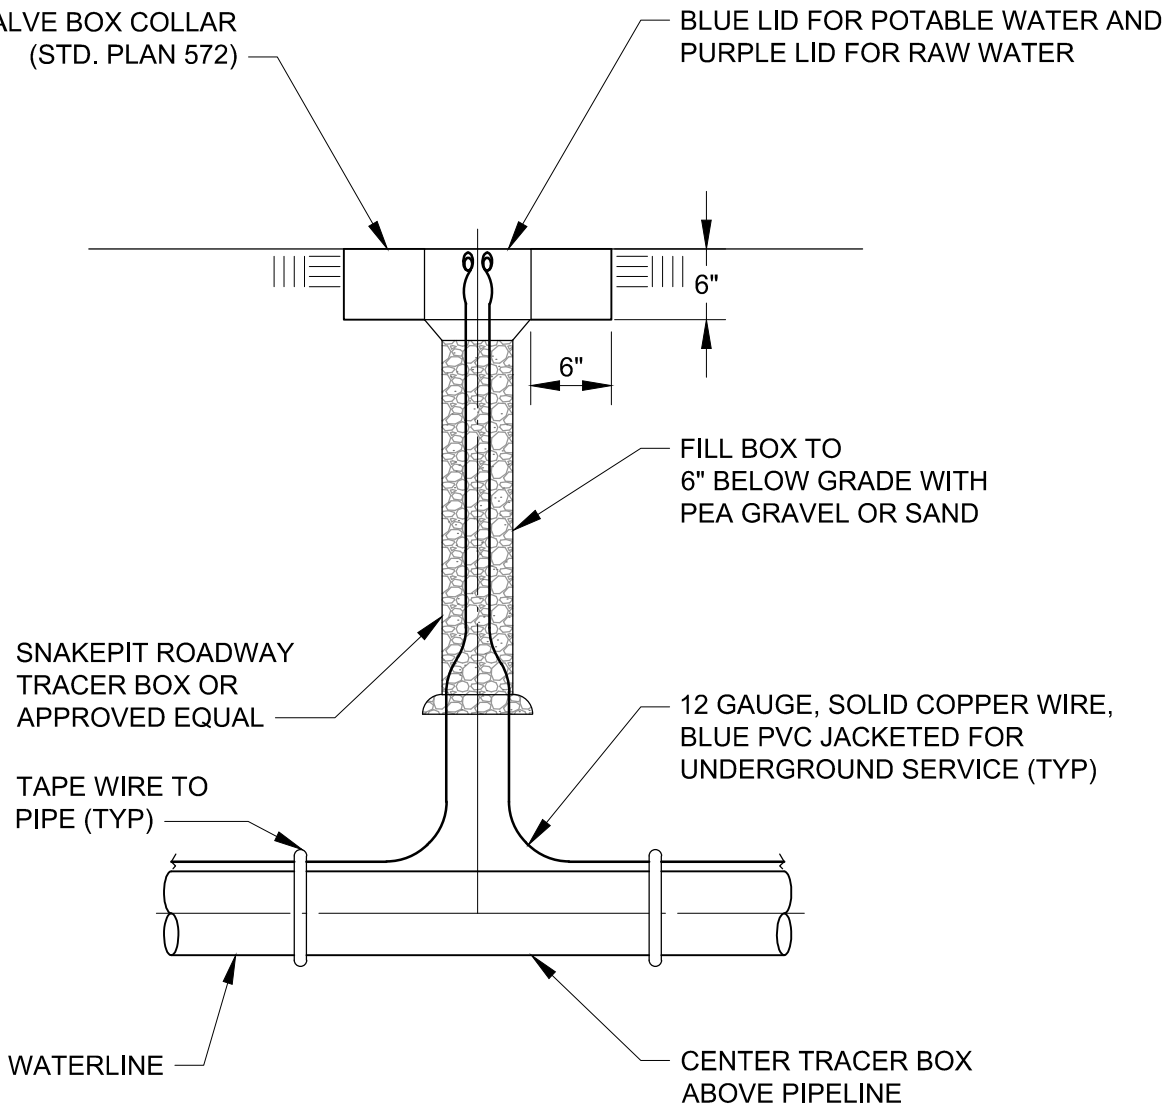


TRACER WIRE TERMINATIONS AT VALVE BOX

NOTES:

1. INSTALL TRACER WIRE ON ALL CONSTRUCTED (METALLIC AND NON-METALLIC) PIPE.
2. ALL SPLICES SHALL BE SILICONE FILLED WIRE CONNECTORS.
3. PROVIDE TRACER WIRE CONNECTIONS AT ALL VALVE BOXES AND PER STD. PLAN 545-B TO MAINTAIN A MAXIMUM DISTANCE BETWEEN CONNECTIONS OF NO GREATER THAN 500 FEET.
4. AT VAULT AND MANHOLE LOCATIONS COIL WIRE INSIDE.

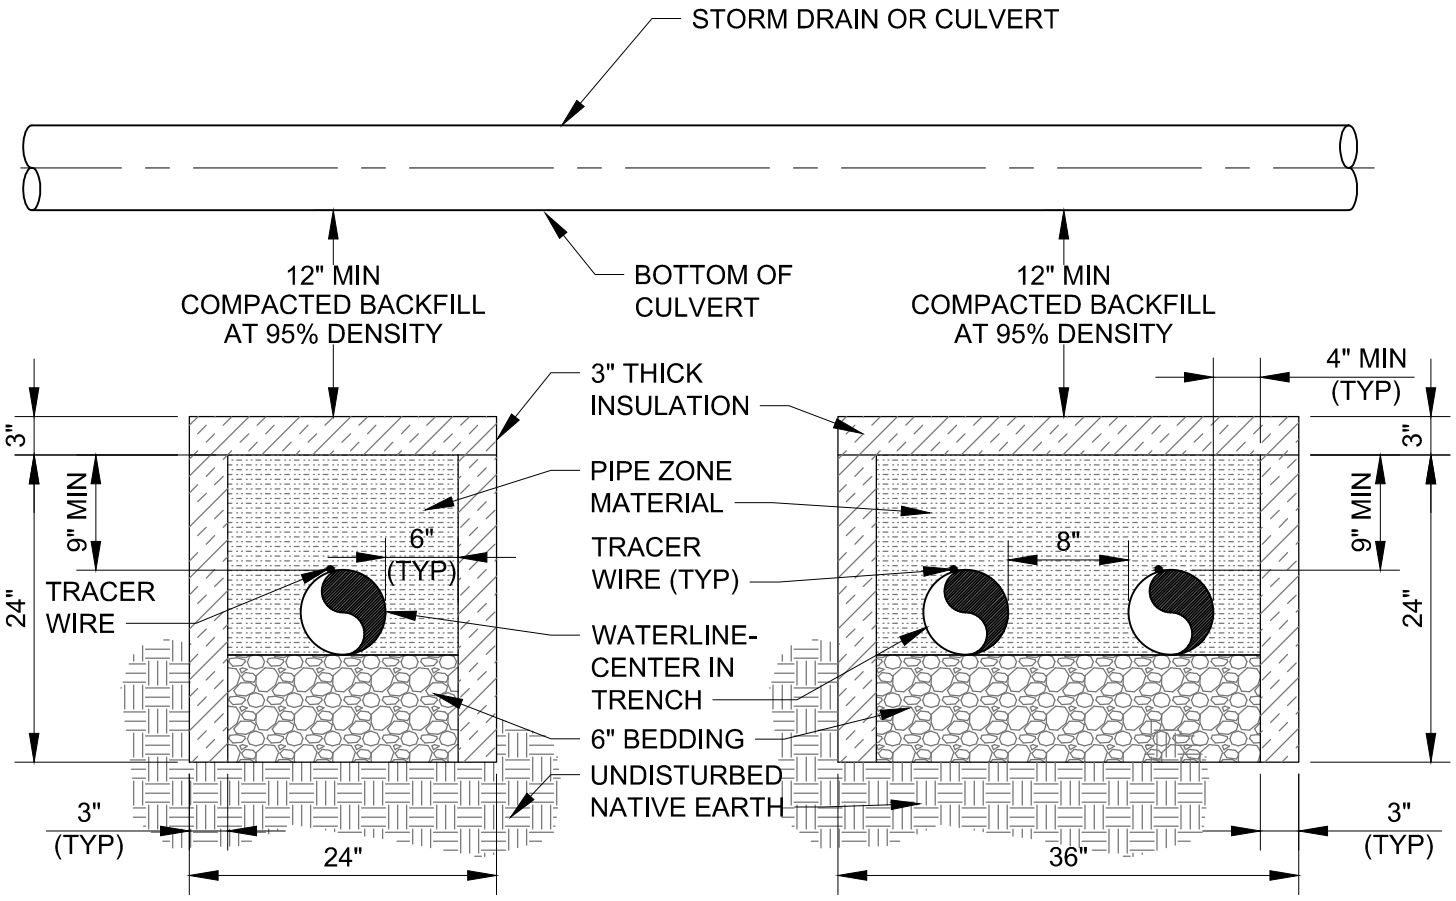
PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2023 REV. 2	**TRACER WIRE VALVE BOX TERMINATIONS**	STD. PLAN **545-A**



NOTES:

1. INSTALL LOCATOR WIRE ON ALL CONSTRUCTED (METALLIC AND NON-METALLIC) PIPE.
2. ALL SPLICES SHALL BE WITH SILICONE FILLED WIRE CONNECTORS.
3. PROVIDE LOCATOR WIRE CONNECTIONS PER THIS DETAIL AS REQUIRED TO MAINTAIN A MAXIMUM DISTANCE BETWEEN CONNECTIONS OF NO GREATER THAN 500 FEET. CONTRACTOR SHALL COORDINATE EACH LOCATION WITH OWNER.
4. LOCATOR WIRE AND WARNING TAPE NOT REQUIRED WHERE DIRECTIONAL DRILLING WILL TAKE PLACE.
5. AT VAULT LOCATIONS COIL WIRE INSIDE OF VAULT.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 3/2014 REV. 0	**TRACER WIRE ACCESS BOX TERMINATIONS**	STD. PLAN **545-B**



ONE LINE IN TRENCH

TWO LINES IN TRENCH

NOTES:

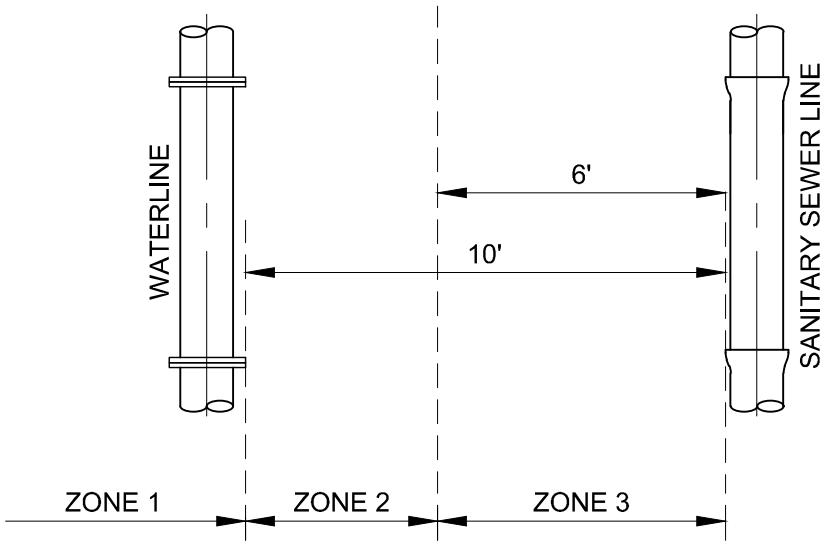
1. WHERE WATERLINES INTERSECT STORM DRAINS OR CULVERTS, INSTALL WATERLINE WITH FROST SHIELD. EXTEND FROST SHIELD A MINIMUM OF 3-FEET ON BOTH SIDES STORM DRAIN OR CULVERT.

2. INSULATION SHALL BE 3-INCH THICK INSULATION BOARD (DOW STYROFOAM HIGHLOAD - 60 INSULATION OR APPROVED EQUAL).

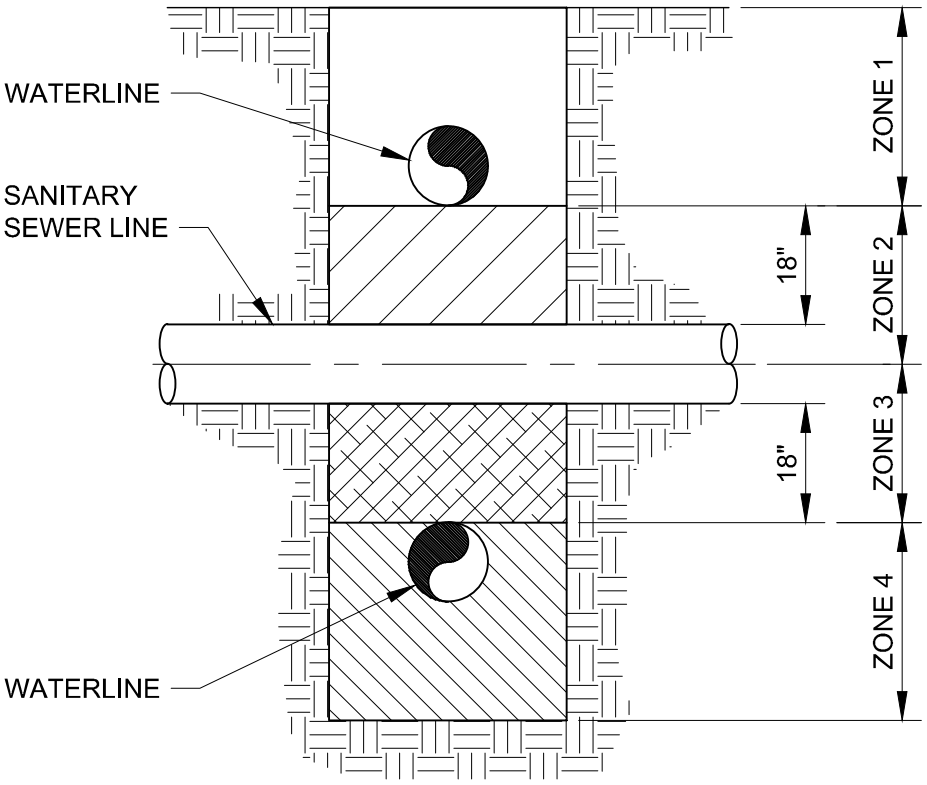
3. ALL BACKFILL MATERIAL, INCLUDING SPECIAL BEDDING AND PIPE ZONE MATERIAL, SHALL BE COMPACTED TO AT LEAST 95% DENSITY TO PROVIDE AN ADEQUATE FOUNDATION FOR THE CULVERT AND ROADWAY.

4. INSTALL TRACER WIRES AS REQUIRED (STD. PLAN 540, 541 AND 545)

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 3/2014 REV. 0	**PIPE INSULATION AT STORM DRAIN CROSSINGS**	STD. PLAN **546**



HORIZONTAL SEPARATION REQUIREMENTS



VERTICAL SEPARATION REQUIREMENTS

NOTES:

1. SEE STD. PLAN 547-B FOR HORIZONTAL AND VERTICAL SEPARATION REQUIREMENT NOTES.
2. ALL CULINARY WATER MAINS AND LATERALS SHALL BE INSTALLED ABOVE SEWER LINES UNLESS APPROVED BY PARK CITY AND UTAH DIVISION OF DRINKING WATER.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 6/2019 REV. 1	**WATER - SANITARY SEWER SEPARATION**	STD. PLAN **547-A**

HORIZONTAL SEPARATION NOTES:

1. ZONE 1: WATER LINE AND SEWER LINE SEPARATED 10 FEET OR GREATER – NO SPECIAL REQUIREMENTS
   ZONE 2: WHERE LOCAL CONDITIONS AND SITE SPECIFIC CONDITIONS PRECLUDE ZONE 1 SEPARATION – SPECIAL REQUIREMENTS APPLY:
   A) APPROVAL BY DIVISION OF ENVIRONMENTAL QUALITY, DIVISION OF DRINKING WATER
   AND,
   B) SEWER PIPES IN GOOD CONDITION
   AND,
   C) NO HIGH GROUNDWATER
   AND,
   D) WATER LINE SEPARATED BY AT LEAST 6 FEET AT OUTSIDE PIPE WALLS
   AND,
   E) BOTTOM OF WATER LINE IS AT LEAST 18 INCHES ABOVE TOP OF SEWER LINE
   AND,
   F) WATER LINE CONSTRUCTED WITH MECHANICAL, RESTRAINED JOINT PIPE
   ZONE 3: WATER LINE AND SEWER LINE SEPARATED LESS THAN 6 FEET – NOT ALLOWED WITHOUT APPROVAL OF PUBLIC UTILITIES ENGINEER AND APPROVED EXCEPTION TO RULE R309-550-7 BY UTAH DIVISION OF ENVIRONMENTAL QUALITY, DIVISION OF DRINKING WATER. ADDITIONAL MITIGATION MEASURES TO PROTECT PUBLIC HEALTH MAY BE REQUIRED.
2. ADDITIONAL WATER-SEWER SEPARATION AND/OR SPECIAL PIPE MATERIALS MAY BE REQUIRED IN AREAS OF HIGH GROUNDWATER, SOILS CONDITIONS, OR SPECIAL SEWER LINE CONTENTS
3. SERVICE LINE TAPS NOT ALLOWED IN ZONE 2
4. SERVICE LINE TAPS WITHIN ZONE 3 ALLOWED ONLY BY SITE SPECIFIC APPROVAL BY DIVISION OF ENVIRONMENTAL QUALITY, DIVISION OF DRINKING WATER
5. CONSULT SNYDERVILLE BASIN WATER RECLAMATION DISTRICT FOR ADDITIONAL SANITARY SEWER RELATED REQUIREMENTS AND SEWER LINE MODIFICATIONS

VERTICAL SEPARATION NOTES:

1. ZONE 1: WATER LINE ABOVE SEWER LINE AND SEPARATED 18 INCHES OR GREATER – NO SPECIAL REQUIREMENTS
   ZONE 2: WATER LINE ABOVE SEWER LINE SEPARATED LESS THAT 18 INCHES – NOT ALLOWED WITHOUT APPROVAL OF PUBLIC UTILITIES ENGINEER AND APPROVED EXCEPTION TO RULE R309-550-7 BY UTAH DIVISION OF ENVIRONMENTAL QUALITY, DIVISION OF DRINKING WATER. ADDITIONAL MITIGATION MEASURES TO PROTECT PUBLIC HEALTH MAY BE REQUIRED SUCH AS: INSTALL CONTROLLED LOW-STRENGTH MATERIAL (CLSM), “FLOWABLE FILL”, 150 PSI MAXIMUM MIX DESIGN WITHIN WATER PIPE ZONE AND TO 18” ABOVE THE SEWER LINE.
   ZONE 3: WATER LINE BELOW SEWER LINE SEPARATED LESS THAN 18 INCHES – NOT ALLOWED WITHOUT APPROVAL OF PUBLIC UTILITIES ENGINEER AND APPROVED EXCEPTION TO RULE R309-550-7 BY UTAH DIVISION OF ENVIRONMENTAL QUALITY, DIVISION OF DRINKING WATER. ADDITIONAL MITIGATION MEASURES TO PROTECT PUBLIC HEALTH MAY BE REQUIRED SUCH AS: INSTALL CONTROLLED LOW-STRENGTH MATERIAL (CLSM), “FLOWABLE FILL”, 150 PSI MAXIMUM MIX DESIGN WITHIN WATER PIPE ZONE AND TO 18” ABOVE THE SEWER LINE.
   ZONE 4: WATER LINE BELOW SEWER LINE SEPARATED GREATER THAN 18 INCHES - NOT ALLOWED WITHOUT APPROVAL OF PUBLIC UTILITIES ENGINEER AND APPROVED EXCEPTION TO RULE R309-550-7 BY UTAH DIVISION OF ENVIRONMENTAL QUALITY, DIVISION OF DRINKING WATER. ADDITIONAL MITIGATION MEASURES TO PROTECT PUBLIC HEALTH MAY BE REQUIRED SUCH AS: CENTER ONE FULL UNCUT LENGTH OF WATER PIPE OVER THE CROSSING AND PROVIDE MECHANICAL RESTRAINED PIPE JOINTS UNTIL THE WATER PIPE EXTENDS TO A DISTANCE OF 10 FEET PERPENDICULAR TO EACH SIDE OF THE SEWER LINE. INSTALL CONTROLLED LOW-STRENGTH MATERIAL (CLSM), “FLOWABLE FILL”, 150 PSI MAXIMUM MIX DESIGN WITHIN WATER PIPE ZONE AND TO 18” ABOVE THE SEWER LINE.
2. SERVICE LINE TAPS NOT ALLOWED IN ZONES 2 AND 3.
3. MAINTAIN 10 FEET HORIZONTAL SEPARATION AND 18 INCHES VERTICAL SEPARATION ABOVE SANITARY SEWER FORCE MAINS
4. CONSULT SNYDERVILLE BASIN WATER RECLAMATION DISTRICT FOR ADDITIONAL SANITARY SEWER RELATED REQUIREMENTS AND SEWER LINE MODIFICATIONS
5. ALL CULINARY WATER MAINS AND LATERALS SHALL BE INSTALLED ABOVER SEWER LINES UNLESS APPROVED BY THE PUBLIC UTILITIES ENGINEER AND UTAH DIVISION OF DRINKING WATER.

SERVICEABLE SADDLE

NONSERVICEABLE SADDLE

NOTES:

1. IF BOTH THE BRONZE SADDLE AND CORPORATION STOP ARE IN GOOD CONDITION:
   - A. THE CORPORATION IS TO BE SHUT OFF, DISCONNECTED FROM THE SERVICE LATERAL, AND INSPECTED FOR LEAKS
   - B. IF THE BRONZE SADDLE AND CORPORATION STOP ARE IN GOOD CONDITION AND DO NOT LEAK A BRASS END CAP IS TO BE INSTALLED ON THE CORPORATION STOP (¾" FORD CAP-24-3-NL, 1" FORD CAP-2-4-NL, OR FORD CAP 4-4-NL, 1 ½"-FORD CAP-2-6-NL OR FORD CAP-4-6-Q-NL) OR APPROVED EQUIVALENTS
   - C. APPLY WAX TAPE COATING SYSTEM TO SERVICE SADDLE BOLTS AND CORPORATION STOP (STD. PLAN 534.2)

2. A WATER SHUTDOWN AND INSTALLATION OF A STAINLESS-STEEL REPAIR CLAMP WILL BE MANDATORY IF, BUT NOT LIMITED TO:
   - A. THE SADDLE IS NOT BRONZE, IS IN POOR CONDITION, OR LEAKS
   - B. THE CORPORATION STOP LEAKS OR IS TAPPED DIRECTLY INTO THE WATER MAIN
   - C. THE SURFACE AREA OF THE WATER MAIN SURROUNDING THE TAP IS IN POOR CONDITION
   - D. APPLY WAX TAPE COATING SYSTEM TO THE ENTIRE STAINLESS STEEL REPAIR CLAMP, THE BAND, BOLTS, AND NUTS (STD. PLAN 534.2)

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2024 REV. 0	**¾" TO 2" SERVICE LINE ABANDONMENT**	STD. PLAN **548**

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 5/2025 REV. 2	**VALVE BOX COLLAR**	STD. PLAN **572**

GENERAL NOTES

1. ALL WORK SHALL CONFORM TO PARK CITY DESIGN STANDARDS, CONSTRUCTION SPECIFICATIONS, AND STANDARD DRAWINGS.

2. SUBMIT SHOP DRAWINGS TO DESIGN ENGINEER AND CITY ENGINEER FOR APPROVAL PRIOR TO CONSTRUCTION. INCLUDE MECHANICAL, STRUCTURAL, ELECTRICAL AND INSTRUMENT DRAWINGS IDENTIFYING CONDUIT, CONDUCTOR, CABLE, SIZE AND ROUTINGS FOR POWER, GROUNDING, INSTRUMENTATION, AND CONTROLS, OPENINGS, PIPE, VALVES, HATCH, AND ALL VAULT COMPONENTS.

3. VAULT BACKFILL: STRUCTURAL FILL MATERIAL COMPACTED TO 95% MINIMUM OF MODIFIED PROCTOR DENSITY.

4. DUCTILE IRON PIPE, FITTINGS, COUPLERS, FLANGES, ETC. SHALL BE IN ACCORDANCE WITH AWWA C153, C111, AND C110 AND RATED FOR A MINIMUM 250 PSI WORKING PRESSURE.

5. FLANGED JOINTS: 125 LB FLANGES, ANSI/AWWA C115/A21.15. "FULL FACE FLANGE-TYTE" GASKET OR "RING FLANGE-TYTE" GASKET (OR PRE-APPROVED EQUAL). GASKETS TO BE HIGH-PERFORMANCE TYPE, 1/8" THICK, AND HAVE AT LEAST (3) BULB TYPE RINGS MOLDED INTO BOTH GASKET FACES, ANSI/AWWA C110/A21.11.

6. FITTINGS: FULL BODY AWWA C110. NO COMPACT FITTINGS. DOMESTIC "MADE IN USA".

7. DUCTILE IRON PIPE AND FITTINGS: UNCOATED. PRIME AND PAINT WITH NSF APPROVED HIGH SOLIDS EPOXY PAINT, TNEMEC POTA-POX N140 OR PRE-APPROVED EQUAL. HIGH PRESSURE SIDE, LIGHT BLUE. LOW PRESSURE SIDE, OFF WHITE.

8. ALL VALVES INSIDE VAULT SHALL BE RATED FOR 250 PSI WORKING PRESSURE, OR HIGHER IF REQUIRED FOR PROJECT.

9. VAULT SHALL BE PRECAST CONCRETE. APPROVAL MUST BE GIVEN TO USE CAST IN PLACE CONCRETE. VAULT SHALL BE DESIGNED FOR HS-20 LOADING. THE LOCATION OF THE PRECAST JOINTS MUST BE APPROVED. SITE SPECIFIC APPROVAL REQUIRED.

10. SEAL ALL JOINTS WITH PREFORMED FLEXIBLE SEALANT CONFORMING TO ASTM C990, AND WRAP WITH EXTERNAL JOINT SEALANT MEETING ASTM C877. FILL JOINTS INSIDE VAULT WITH CAULK OR GROUT.

11. PROVIDE (2) 8 HR DAYS FOR TESTING, STARTUP, AND TRAINING FOR PRV VALVES WITH MANUFACTURER REPRESENTATIVE.

12. SEAL ALL VAULT PENETRATIONS WITH HYDROPHILIC NON-SHRINK GROUT.

13. 36" MINIMUM LANDSCAPE CLEARANCE AROUND HATCH REQUIRED.

14. 24" CLEAR, CONVENIENT AND UNINHIBITED ACCESS PATH REQUIRED TO HATCH.

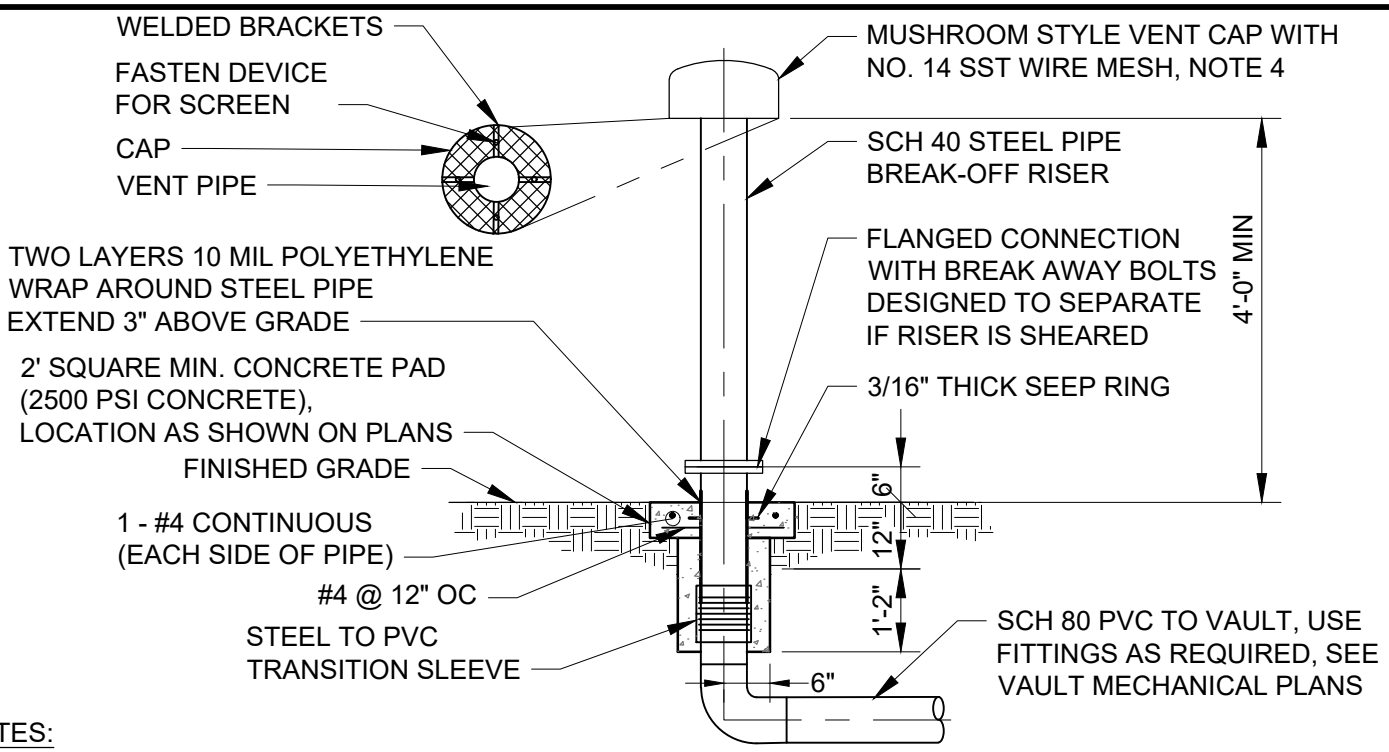
MATERIAL LIST (CON'T)

ITEM	PRESSURE REDUCING VALVE VAULT
19	2" STEEL PIPE SUPPORT STAND, ADJUSTABLE (3 REQUIRED ON 6" PIPE SYSTEM, 3 REQUIRED ON 4" PIPE SYSTEM), SEE STD. PLAN 578
20	CORE DRILL OPENING WITH LINK-SEAL PIPE-TO-WALL SEAL. TYPICAL ON ALL OPENING. FILL OUTSIDE OPENINGS WITH NON-SHRINK GROUT AND CAULK
21	DRAIN SUMP, PIPE TO DAYLIGHT WITH DRAIN PIPE AND #4 SST RODENT PROTECTION SCREEN ON END OF PIPE. ROUTE AS SHOWN ON SITE PLAN. IF NO PIPE-TO-DAYLIGHT OPTION IS AVAILABLE, INSTALL A SUMP PUMP. CITY APPROVAL IS REQUIRED FOR A SUMP PUMP. SEE STD. PLAN 573-D.2
22	8" MJ SOLID SLEEVE, MEGA-LUG RESTRAINTS WITH CORE-TEN BOLTS
23	VAULT IN ACCORDANCE WITH 573-A AND 573-B A. PRECAST CONCRETE VAULT RATED FOR HS-20 LOADING. MAY BE CAST IN PLACE PER CITY APPROVAL. PROVIDE STAMPED STRUCTURAL DRAWINGS B. WATERPROOF OUTSIDE WALLS AND TOP SLAB PER IBC CODE FOR BURIED FOUNDATIONS
24	MECHANICAL JOINT DUCTILE IRON RETAINER GLAND WITH CONCRETE THRUST BLOCK, REINFORCE CONCRETE WITH (4) #4 EACH SIDE OF PIPE.
25	30"x30"x30" SUMP. FRP GRATING, 1-1/2" THICK MIN. AND RATED FOR 300 LB/FT PEDESTRIAN TRAFFIC.
26	VAULT LADDER, SEE DETAIL 7 ON 573-D.4
27	3" PRESSURE RELIEF VALVE, CLA-VAL MODEL 50A-01 BKCX WITH MOUNTED LIMIT SWITCH OR MICRO SWITCH WITH SCADA CONNECT FOR "OPEN" ALARM CONDITION, SEE STD. PLAN 573-D.2
28	IN-LINE GAUGE PRESSURE TRANSMITTER, ROSEMOUNT MODEL 3051TG 800 PSI ASSEMBLED TO INTEGRAL, 2-VALVE, ROSEMOUNT 306 MANIFOLD. SEE STD. PLAN 573-D.1. 4-20 MA ANALOG
29	6"x6"x3" DI TEE FLANGE X FLANGE X FLANGE
30	6" DI PIPE. IF VAULT HAS POWER, THIS ITEM SHALL BE REPLACED WITH ITEMS 29 AND 27.
31	SUMP PUMP: 2" SUMP PUMP, TSURUMI MODEL HSZ2.4S-62 OR EQUAL. SUMP PUMP REQUIRED IF DRAIN TO DAYLIGHT NOT AVAILABLE, SEE STD. PLAN 573-D.2
32	4" SIEMENS MAGNETIC FLOW METER, 5100 W



NOTES:

1. WELD ALL STEEL FITTINGS EXCEPT MATCHING BOLT ON FLANGE.
2. ALL ABOVE GRADE STEEL PIPING SHALL BE CORE-TEN BARE STEEL.
3. VENT CAP SHALL BE 12" DIA FOR 6" VENT PIPE. OTHER SIZES SHALL BE PROJECT SPECIFIC.
4. STEEL WALL PIPE WITH SEEP RING SHALL BE CAST IN VAULT FOR VENT PIPES INSTALLED ON TOP OF VAULTS.

PRESSURE REDUCING VALVE VAULT

573-E.2

PANEL NOTE:

1. INSTALL WEATHERPROOF LIGHT SWITCH AND NEMA 4X HOA CONTROL BOX IN HATCH OPENING ABOUT 8" FROM TOP OF CONCRETE.

2. MAINTAIN NATIONAL ELECTRICAL CODE REQUIRED CLEARANCE AND WORKING SPACE AROUND PANELS.

3. COORDINATE WITH PCMC FOR RTU PANEL, ANTENNA, AND CABLE REQUIREMENTS. CONTRACTOR TO FURNISH AND INSTALL RTU PANEL, ANTENNA, ANTENNA MAST, CONDUIT, CONDUCTOR, AND CABLE WITH WIRING TERMINATIONS INSIDE THE RTU PANEL. CONTRACTOR TO SIZE RTU RELATED EQUIPMENT FOR 11 I/O POINTS INCLUDING 3 SPARES. (1 FLOW METER, 2 PRESSURE TRANSDUCERS, 1 TEMPERATURE SENSOR, 1 FLOOD ALARM, 1 ENTRY SECURITY ALARM, 1 PRESSURE RELIEF OPEN ALARM, 2 SPARE DIGITAL INPUTS AND 2 SPARE ANALOG INPUTS). CONTRACTOR MUST USE PCMC'S PREFERRED VENDOR TO PROVIDE AND INSTALL A PRE-ASSEMBLED AND PRE-WIRED BACKPANEL IN THE RTU PANEL AND PROVIDE SCADA PROGRAMMING.

4. SUMP PUMP TO BE HARDWIRED TO PANEL LP-A.

5. INSTALL 4-FOOT BASEBOARD HEATER AT 2-FEET ABOVE FINISHED FLOOR OF VAULT. HEATER SHALL BE 240 V WITH 3,400 BTUH, INTEGRAL DIAL THERMOSTAT.

6. GASKETED AND ENCLOSED INDUSTRIAL FIXTURE, FIBERGLASS HOUSING, WET LOCATION TWO LAMP FLUORESCENT, 120 VOLT, INSTANT START ELECTRONIC BALLAST METALUX VT3-232DR-120V-EB81-WL-U OR EQUAL. MOUNT FIXTURE ON WALL AT ABOUT 7 FEET ABOVE FINISHED FLOOR.

7. NEMA 4 HEAVY-DUTY LIMIT SWITCH WITH 1NO 1NC CONTACT 5A 120 VAC. SQUARE D COMPANY, CLASS 9007 OR EQUAL.

8. ROOM TEMPERATURE DISPLAY AND 4-20 mA TRANSMITTER WITH 100 OHM PLATINUM RTD. DEVAR MODEL D-RTTI-0024.

9. INSTALL UTILITY POWER METER WITH 50 AMP BREAKER ON BACK TO BACK UNISTRUT TO 2" GALVANIZED STEEL POLE ACCORDING TO UTILITY COMPANY STANDARDS.

10. IF FIBER IS AVAILABLE, INSTALL JUNCTION BOX FOR FIBER CONNECTION. COORDINATE SIZE OF BOX WITH PROVIDER.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 05/2025 REV. 3	**PRESSURE REDUCING VALVE VAULT**	STD. PLAN **573-E.3**

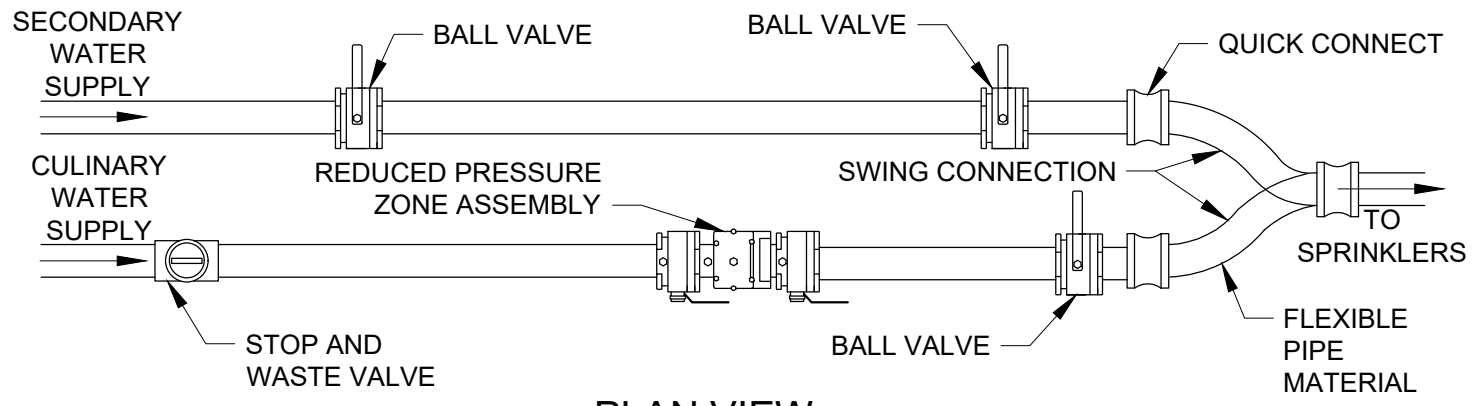
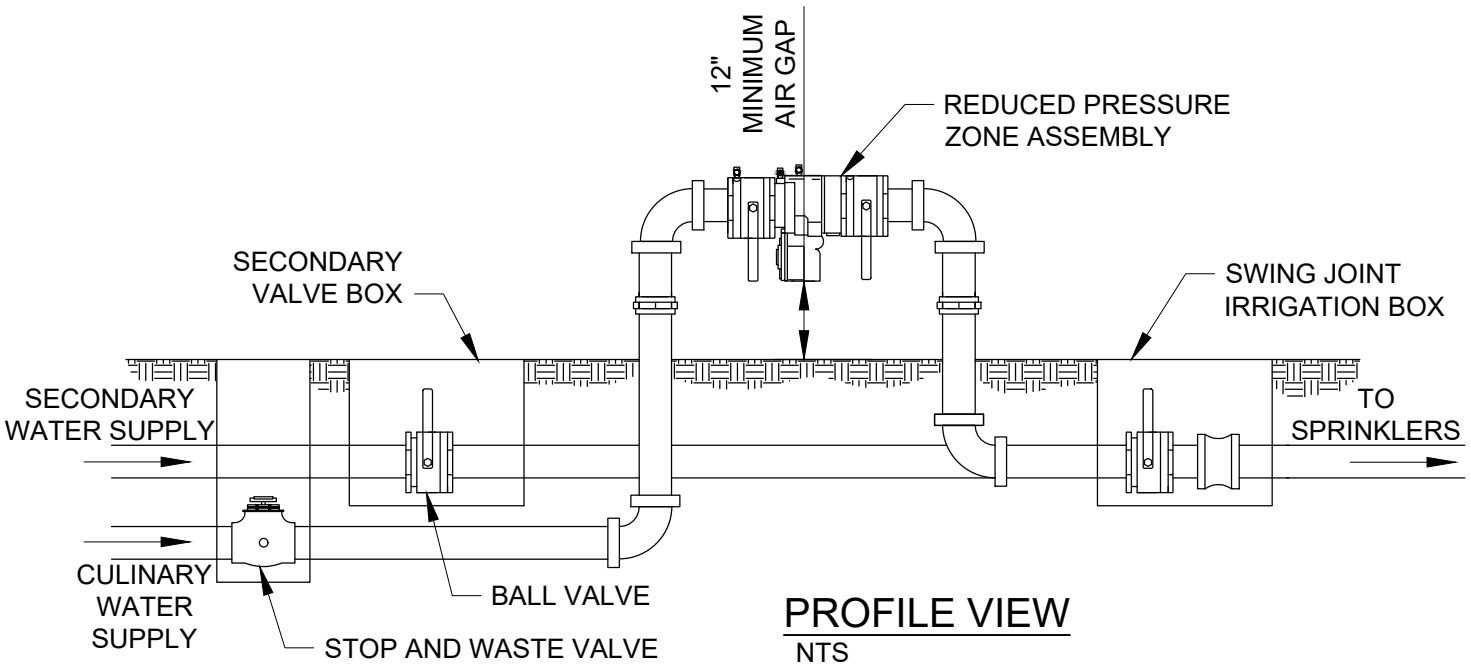
LESS THAN 3" DIAMETER

PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2024 REV. 2	**CULINARY WATER - IRRIGATION BACKFLOW PREVENTER**	STD. PLAN **577-A**



PLAN VIEW
NTS

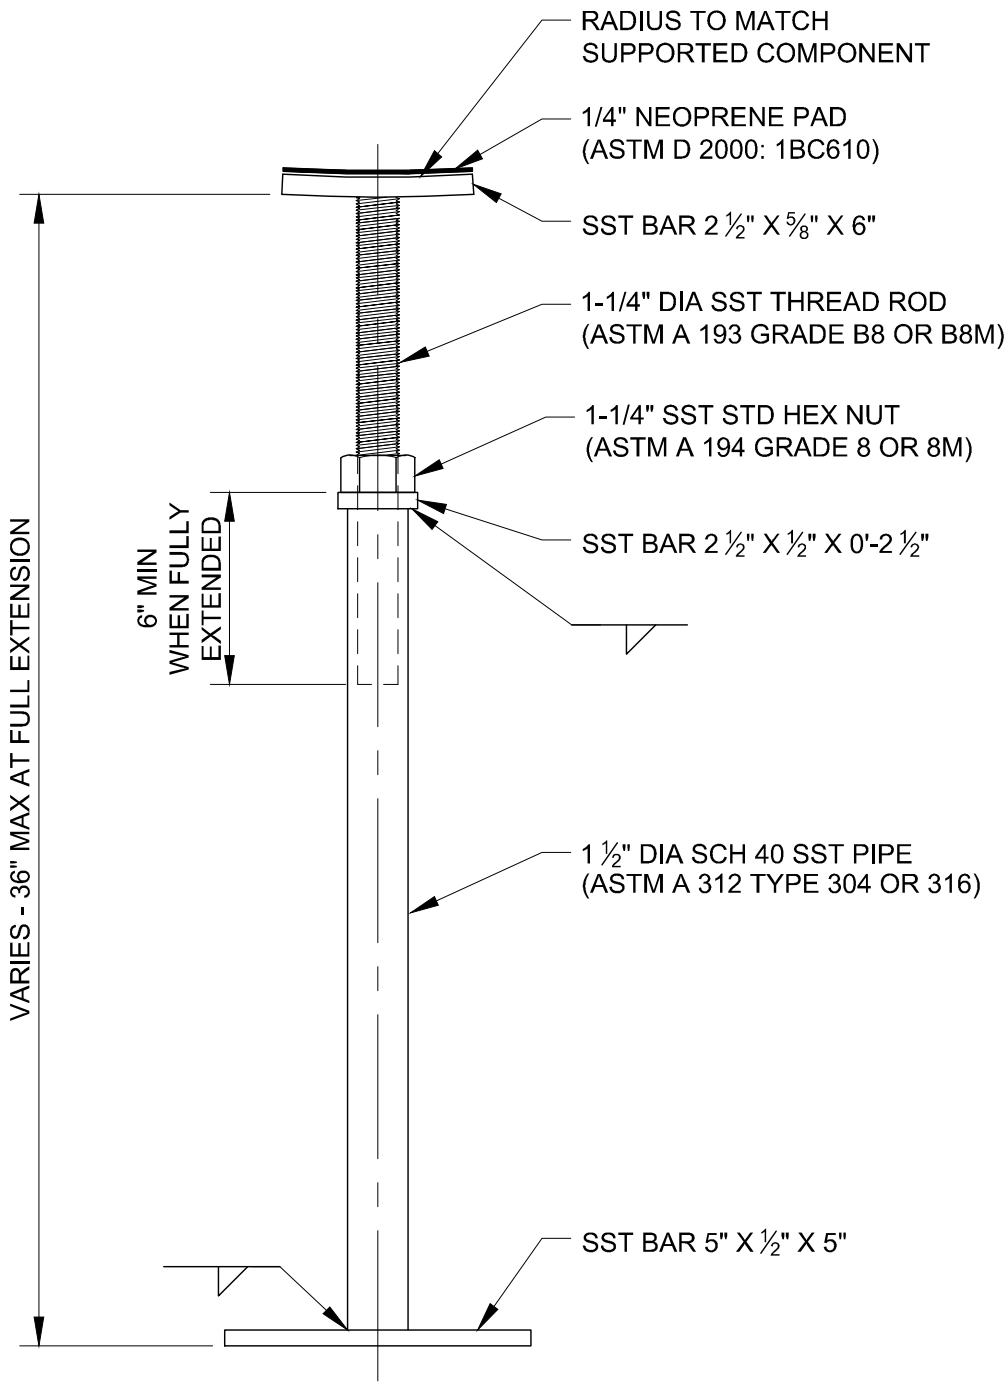


PROFILE VIEW
NTS

NOTES:

1. THE SWING CONNECTION IS INSTALLED SO THAT EITHER THE SECONDARY IRRIGATION WATER OR THE CULINARY WATER IS CONNECTED AND FEEDING THE SPRINKLER SYSTEM AT THE ONE TIME.
2. THE REDUCED PRESSURE ZONE ASSEMBLY MUST BE LOCATED AT A MINIMUM OF 12" FROM WALL, FENCE OR OTHER OBSTACLE.
3. THE REDUCED PRESSURE ZONE ASSEMBLY MUST BE LOCATED AT A MINIMUM OF 12" ABOVE GRADE (NOT ALLOWED IN A PIT BELOW GRADE).
4. THE REDUCED PRESSURE ZONE ASSEMBLY MUST BE INSPECTED BY A CERTIFIED BACKFLOW TECHNICIAN ON AN ANNUAL BASIS. CONSISTENT WITH PARK CITY MUNICIPAL CODE 13-1-29, BACKFLOW PREVENTER SHALL BE TESTED UPON INITIAL INSTALLATION AND EVERY 12 MONTHS THEREAFTER. PROOF OF TESTING/INSPECTION MUST BE PROVIDED TO PARK CITY EACH TIME. FAILURE TO PROVIDE PROOF OF TESTING MAY LEAD TO WATER SHUT-OFF TO PROTECT THE DRINKING WATER SYSTEM FROM POTENTIAL CONTAMINATION.

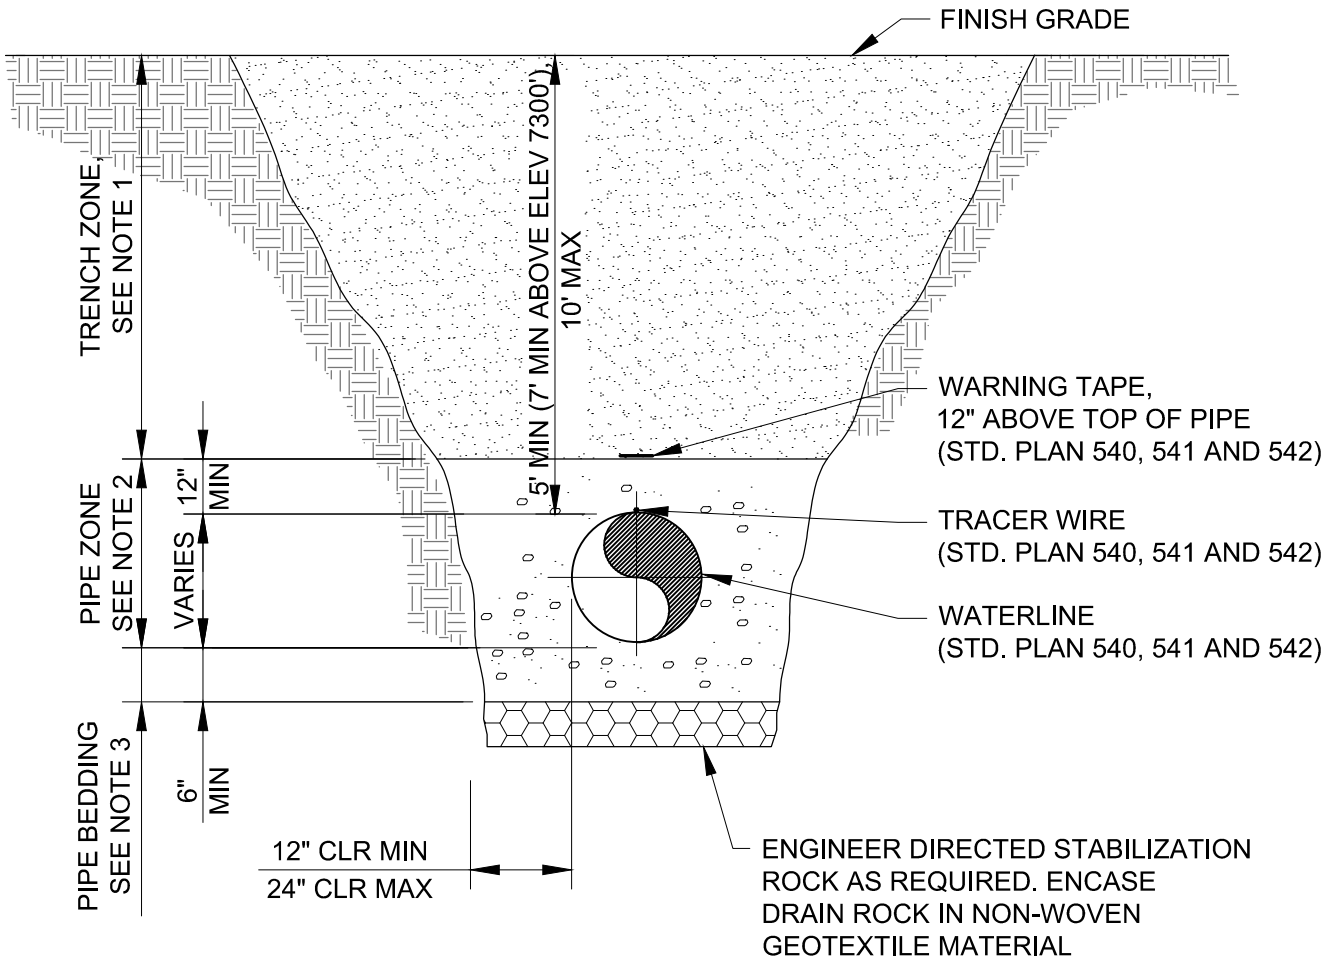
PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2024 REV. 0	**CULINARY & SECONDARY WATER - IRRIGATION SWING CHECK CONNECTION**	STD. PLAN **577-B**



NOTES:

1. BAR MATERIAL TO BE ASTM A 240 TYPE 304 OR 316 (Fy= 30 KSI MIN.)

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 3/2014 REV. 0	**PIPE SUPPORT**	STD. PLAN **578**



NOTES:

1. TRENCH ZONE
   WATER MAIN, FIRE LINE, AND APPURTENANCES:
   BACKFILL AND COMPACT PER PCMC DESIGN STANDARDS AND CONSTRUCTION SPECIFICATIONS UNLESS OTHERWISE REQUIRED BY SPECIAL CONDITIONS
   WATER SERVICE - NEW PAVEMENT AND LANDSCAPE AREA:
   BACKFILL AND COMPACT PER PCMC DESIGN STANDARDS AND CONSTRUCTION SPECIFICATIONS UNLESS OTHERWISE REQUIRED BY SPECIAL CONDITIONS
   WATER SERVICE - EXISTING ROADWAY AND PAVED AREA:
   BACKFILL TO PAVEMENT DEPTH WITH CONTROLLED LOW-STRENGTH MATERIAL (CLSM), "FLOWABLE FILL", 100 PSI MINIMUM AND 150 PSI MAXIMUM MIX DESIGN.
2. PIPE ZONE
   BACKFILL MATERIAL SHALL BE TAMPED IN LAYERS AROUND THE PIPE AND TO A SUFFICIENT HEIGHT ABOVE THE PIPE TO ADEQUATELY SUPPORT AND PROTECT THE PIPE. THE MATERIAL AND BACKFILL ZONES SHALL BE AS SPECIFIED BY THE APPLICABLE AWWA STANDARD FOR THAT PIPE TYPE. DO NOT DROP PIPE OR ACCESSORIES INTO THE TRENCH. AS A MINIMUM:
   WATER MAIN, FIRE LINE, AND APPURTENANCES:
   SAND OR 3/4" MAXIMUM PARTICLE SIZE ROADBASE COMPACT TO 96% OF MODIFIED PROCTOR DENSITY
   WATER SERVICE:
   SAND COMPACTED TO 96% OF MODIFIED PROCTOR DENSITY
3. PIPE BEDDING
   WATER MAIN, FIRE LINE, AND APPURTENANCES:
   SAND OR 3/4" ROADBASE COMPACT TO 96% OF MODIFIED PROCTOR DENSITY
   WATER SERVICE:
   SAND COMPACTED TO 96% OF MODIFIED PROCTOR DENSITY
   A CONTINUOUS AND UNIFORM BEDDING SHALL BE PROVIDED IN THE TRENCH FOR ALL BURIED PIPE. STONES LARGER THAN 3/4" AS DESCRIBED IN NOTE 2 SHALL BE REMOVED FOR A DEPTH OF AT LEAST 6 INCHES BELOW THE BOTTOM OF THE PIPE.
4. PROVIDE TRENCH PLATING AS REQUIRED FOR CLSM BACKFILL INSTALLATIONS
5. COMPLY WITH APPLICABLE PARK CITY SOILS ORDINANCE REQUIREMENTS

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 6/2019 REV. 1	**WATER TRENCH BEDDING AND BACKFILL**	STD. PLAN **580**

WATER SERVICE LINE FLOW CHART

594.1

* VALUES DERIVED FROM SR WATER METERS TYPICAL PERFORMANCE CURVES AND THE METERS AWWA MAXIMUM CAPACITY

ASSUMED:

L (FT) = 40.0 (MAX LENGTH IN FEET FROM MAIN TO METER)

C = 135.0 (OLDER HDPE PIPE)

WHEN USED TO CALCULATE THE PRESSURE DROP USING THE US CUSTOMARY UNITS SYSTEM, THE EQUATION IS:

$$P_d = \frac{4.52 * L * Q^{1.85}}{C^{1.85} * d^{4.87}}$$

WHERE:

P_D = PRESSURE DROP OVER A LENGTH OF PIPE, PSIG (POUNDS PER SQUARE INCH GAUGE PRESSURE)

L = LENGTH OF PIPE, FT (FEET)

Q = FLOW, GPM (GALLONS PER MINUTE)

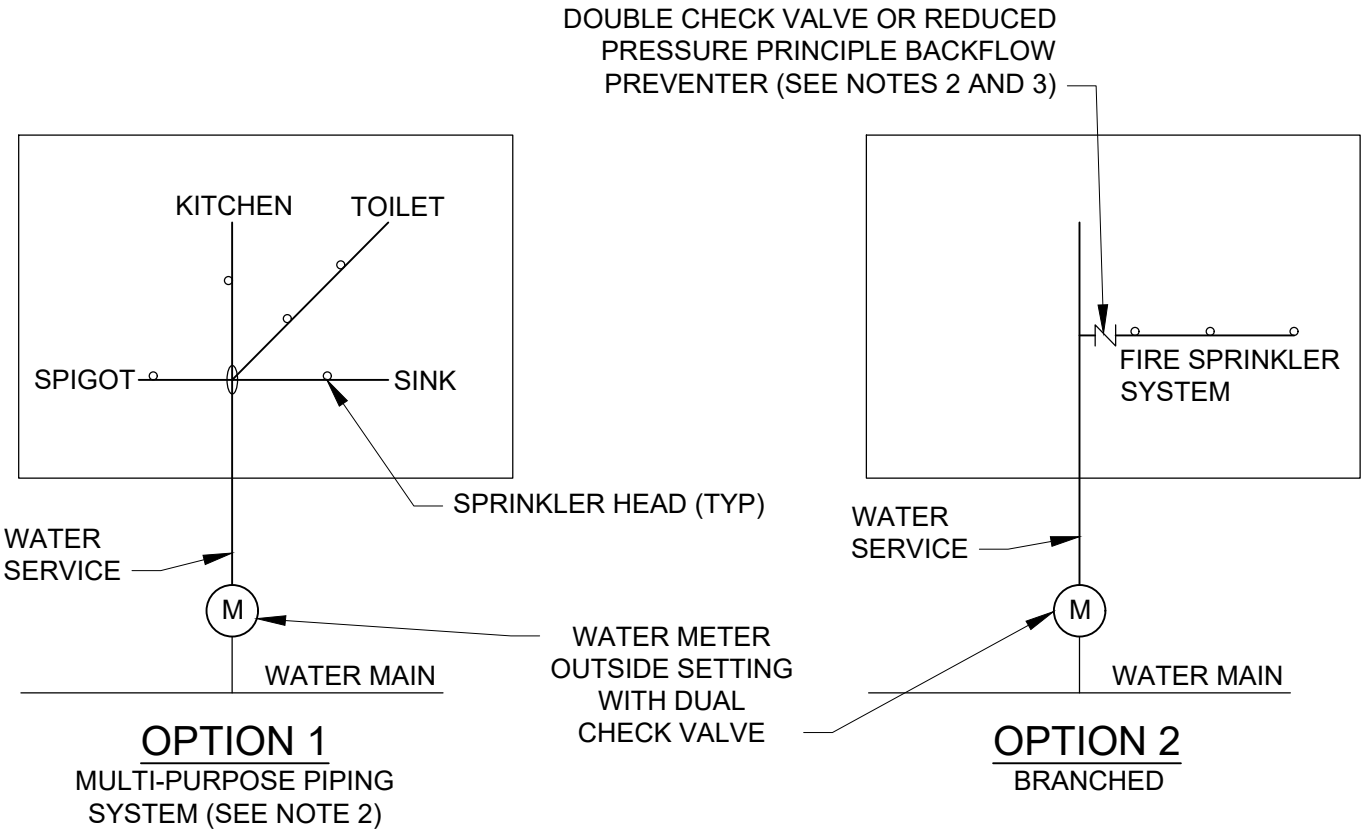
d = INSIDE PIPE DIAMETER, IN (INCHES)

C = HAZEN WILLIAMS COEFFICIENT OF FRICTION

NOTES:

1. THIS TABLE IS FOR REFERENCE PURPOSES ONLY AND REPRESENTS MAXIMUM ANTICIPATED FLOW TO THE POINT OF CONNECTION (40 FOOT MAXIMUM LENGTH) WITHOUT ADDITIONAL VALVES AND PIPING. HOMEOWNERS, ARCHITECTS, ENGINEERS, FIRE SPRINKLER DESIGNERS, ETC., ARE RESPONSIBLE TO VERIFY EXISTING WATER SYSTEM PRESSURES PRIOR TO DESIGN AND INCORPORATE THE INFORMATION INTO THE WATER SERVICE AND FIRE SERVICE LINE DESIGN. ADDITIONAL PRESSURE LOSSES WILL OCCUR THROUGH ADDITIONAL REQUIRED VALVES AND PIPING.
2. THE MINIMUM WATER PRESSURE AT THE POINT OF CONNECTION SHALL BE ABOVE 20 PSI WITH FIRE FLOW AND PEAK DAY DEMANDS, ABOVE 30 PSI WITH PEAK INSTANTANEOUS DEMANDS, AND ABOVE 40 PSI WITH PEAK DAY DEMANDS. SEE UTAH ADMINISTRATIVE CODE R309-105-9. MINIMUM WATER PRESSURE.
3. INDIVIDUAL HOME BOOSTER PUMPS SHALL NOT BE ALLOWED FOR ANY INDIVIDUAL SERVICE FROM THE PUBLIC WATER SUPPLY MAIN, SEE UTAH ADMINISTRATIVE CODE R309-105-9 AND R309-540-5(4)(C)

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 4/2014 REV. 0	**WATER SERVICE LINE FLOW CHART**	STD. PLAN **594.2**



OPTION 1
MULTI-PURPOSE PIPING SYSTEM (SEE NOTE 2)

OPTION 2
BRANCHED

NOTES:

1. MULTI-PURPOSE RESIDENTIAL FIRE SPRINKLER PROTECTION PLUMBING SYSTEM SHALL MEET NFPA 13D OR 13R REQUIREMENTS AND PARK CITY BUILDING DEPARTMENT AND FIRE MARSHAL APPROVAL. OPTION 1 SHALL BE APPROVED BY THE PARK CITY BUILDING DEPARTMENT, CITY ENGINEER, AND FIRE MARSHAL PRIOR TO SYSTEM DESIGN. ALL SPRINKLERS AND SYSTEM COMPONENTS SHALL BE NSF LISTED FOR POTABLE WATER. ALL PIPE SHALL BE LISTED FOR FIRE PROTECTION SERVICE.

2. DESIGN AND CONSTRUCTION SHALL COMPLY WITH INTERNATIONAL PLUMBING CODE (IPC) AS ADOPTED BY UTAH, AND WITH APPLICABLE RESIDENTIAL AND BUILDING CODES.

3. BACKFLOW PREVENTION: ADDITIONAL BACKFLOW PREVENTION IS REQUIRED FOR OPTION 2. PROVIDE A DOUBLE CHECK BACKFLOW ASSEMBLY (DC) OR REDUCED PRESSURE PRINCIPLE BACKFLOW ASSEMBLY (RP) ON THE FIRE SPRINKLER RISER ASSEMBLY. BACKFLOW PREVENTER STYLE TO BE DETERMINED BY IPC AS ADOPTED BY UTAH AND APPROVED BY THE BUILDING AND WATER DEPARTMENT BASED ON DEGREE OF HAZARD POSED BY FIRE SPRINKLER PROTECTION SYSTEM.

4. BEFORE A CERTIFICATE OF OCCUPANCY CAN BE ISSUED BY THE BUILDING DEPARTMENT, BACKFLOW ASSEMBLY TESTING FOR PROPER OPERATION (PER IPC AS ADOPTED BY UTAH BY A CERTIFIED TESTER RECOGNIZED BY THE UTAH DIVISION OF DRINKING WATER [DDW]) IS REQUIRED AND A REPORT MUST BE SUBMITTED TO THE CITY.

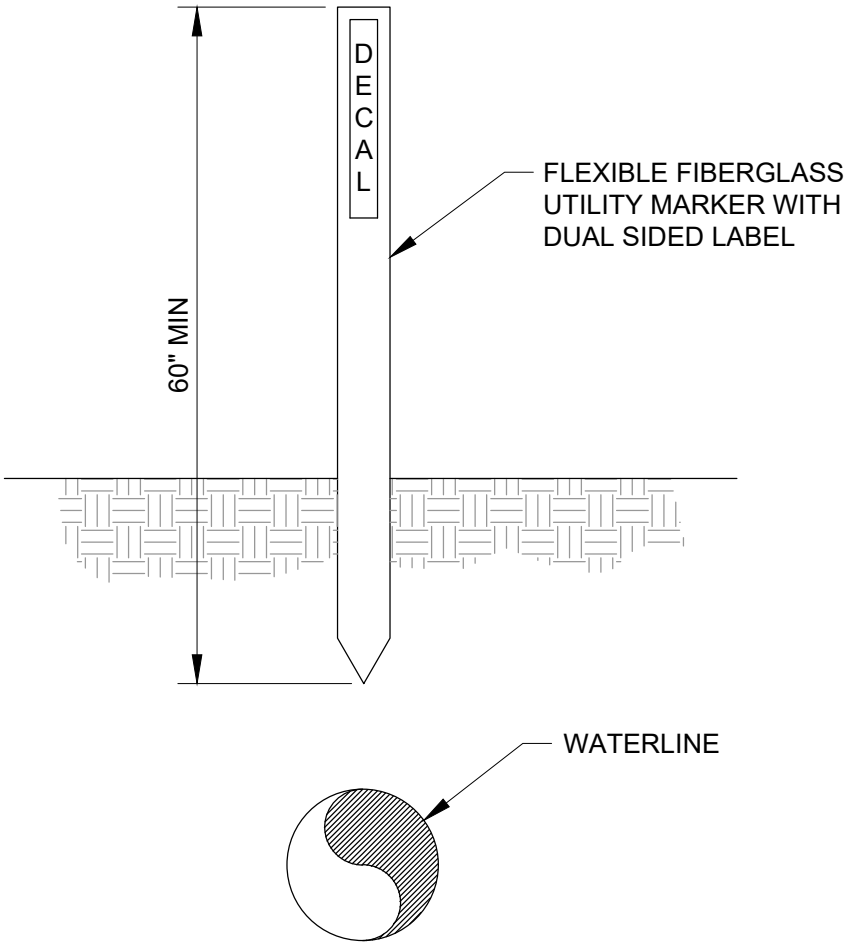
5. FIRE SPRINKLER PROTECTION SYSTEMS CONTAINING FIRE PUMPS REQUIRE SITE SPECIFIC DESIGN AND APPROVAL BY THE CITY ENGINEER, PARK CITY BUILDING DEPARTMENT, WATER DEPARTMENT, AND FIRE MARSHAL PRIOR TO BUILDING APPROVAL. FIRE PUMP SYSTEM SHALL BE LOCATED ON THE BUILDING SIDE OF THE WATER OUTSIDE OF THE WATER METER VAULT. REFER TO STD. PLAN 520 FOR REQUIREMENTS.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	DATE 03/2024 REV. 1	**NFPA 13D OR 13R RESIDENTIAL FIRE SPRINKLER SERVICES**	STD. PLAN **595**

DETAIL NOTES

1. REFER TO STD. PLAN 520 FOR GENERAL REQUIREMENTS – METER, METER VAULT, AND SERVICE LINE
2. REFER TO STD. PLANS FOR WATER SERVICE REQUIREMENTS
3. REFER TO THE STATE OF UTAH, DEPARTMENT OF ENVIRONMENTAL QUALITY DIVISION OF DRINKING WATER LIST OF APPROVED BACKFLOW PREVENTION DEVICES. APPROVED DEVICES CAN BE FOUND ON THE UTAH DIVISION OF DRINKING WATER (DDW), CROSS CONNECTION CONTROL & BACKFLOW PREVENTION WEBSITE:
4. BACKFLOW ASSEMBLY SELECTION AND INSTALLATION SHALL CONFORM TO THE APPROVED INSTALLATION ORIENTATION ONLY.
5. ALL BACKFLOW PREVENTION DEVICES USED WITHIN THE STATE OF UTAH SHALL HAVE THIRD PARTY CERTIFICATION AS MENTIONED ABOVE.
6. ALL BACKFLOW PREVENTERS HAVE TO BE TESTED ANNUALY TO ENSURE THAT THEY ARE FUNCTIONING PROPERLY. A VISUAL CHECK OF AIR GAPS IS SUFFICIENT, BUT MECHANICAL BACKFLOW PREVENTERS HAVE TO BE TESTED BY A STATE CERTIFIED BACKFLOW SPECIALIST, WITH PROPERLY CALIBRATED GAUGE EQUIPMENT. TO OBTAIN A LIST OF STATE CERTIFIED TESTERS REFER TO THE UTAH DIVISION OF DRINKING WATER (DDW), CROSS CONNECTION CONTROL & BACKFLOW PREVENTION WEBSITE.
7. FIRE SPRINKLER SYSTEM PUMPS, INTEGRAL TO THE FIRE SPRINKLER PIPING, TO MEET FIRE SPRINKLER PRESSURE DESIGN REQUIREMENTS ARE CONSIDERED OUTSIDE THE INTENT OF UTAH DDW REGULATION R309-550-11(3) AND DO NOT REQUIRE APPROVAL OF THE DDW IF THEIR INSTALLATION CONFORMS TO UTAH ADOPTED PLUMBING CODE AND NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) 13 D. PUMPS SHALL BE CONNECTED ON THE BUILDING SIDE OF THE WATER METER VAULT AND SHALL BE APPROVED BY THE CITY ENGINEER AND BUILDING DEPARTMENT. PUMP APPROVAL IS FOR FIRE SPRINKLER SYSTEMS ONLY AND NOT FOR DOMESTIC USE.

PARK CITY 1884 PARK CITY MUNICIPAL CORPORATION **WATER**	**DATE** 3/2024 **REV.** 1	**NFPA 13D OR 13R RESIDENTIAL FIRE SPRINKLER SERVICES**	**STD. PLAN** **595 S**



NOTES:

1. INSTALL REFERENCE POST WHEN WATERLINE IS LOCATED OUTSIDE OF PUBLIC RIGHT-OF-WAYS WHEN DIRECTED BY CITY ENGINEER AND WATER DEPARTMENT.

2. BURIED WATER LINE MARKER SHALL BE CONSTRUCTED ON 4" RHINO 3-RAIL FIBERGLASS UTILITY MARKER POSTS WITH VERBIAGE AS SHOWN ON THIS DETAIL. BY "RHINO" OR EQUAL. (WWW.RHINOMARKERS.COM)

3. PARK CITY LOGO IS WHITE PMS CL GY, 5CCV, 282CV AND 180CV. ALL TEXT AND GRAPHICS SHALL BE SET AGAINST A WHITE BACKGROUND. (RHINO MARKERS SHALL REFER TO SD-7964K DECAL)

4. MOUNT MARKERS PER MANUFACTURERS RECOMMENDATIONS.

5. INSTALL MARKERS AT LOCATIONS INDICATED ON PLANS BUT TYPICALLY EVERY 500 FT AND AT VALVES, TRACER WIRE BOXES, AND BENDS IN ALIGNMENT.

6. PLACE MARKER ON PIPE CENTERLINE.

7. OBTAIN LOGOS FROM PARK CITY TO PROVIDE TO SIGN MANUFACTURER.

8. PRINTING MATERIAL AND SIGN MATERIAL SHALL BE WATER-RESISTANT.

9. LABEL TO READ "CAUTION WATER PIPELINE - BEFORE DIGGING CALL 811"

DIVISION 600-800 UNUSED

DIVISION 900 INFORMATION TECHNOLOGY SYSTEMS

900.01 Information Technology System Standards

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Park City has adopted the current Utah Department of Transportation (UDOT) Standard Specifications and Standard Drawings sections 13431 through 13595 regarding Information Technology System (ITS) Standards with the following exceptions. Applicants shall comply with these UDOT Standards and Specifications unless given written exception by the City Manager or Designee.

1.2 UDOT STANDARD DRAWING EXCEPTIONS

A. Amend the following standard drawings:
The amendments are shown in the drawings with a "9-" prefix as provided in section 900.02 ITS Supplemental Standard Drawings.

AT 6	Conduit Details
AT 7A	Polymer Concrete Junction Box Details
AT 7B	Precast Concrete Fiber Optic and Utility Vault Details
AT-8	ITS Cabinet
AT-9	ITS Cabinet and Equipment Disconnect and Transformer Frame

1.3 UDOT ITS DESIGN MANUAL

A. Park City has adopted the current Utah Department of Transportation (UDOT) ITS Design Manual as the guiding directions for connection to the city infrastructure. Applicants shall comply with these guidelines in coordination with Park City IT unless given written exception by the City Manager or Designee.

NOTES:

1. SUPPLY TYPE IV FIBER VAULT WITH A TAMPERPROOF HINGED METAL LID FOR UNPAVED AREAS, OR A TAMPERPROOF HEAVYDUTY MANHOLE-STYLE LID IN PAVED AREAS. SUPPLY FIBER VAULTS, LIDS, AND COVERS RATED FOR AASHTO LRFD HL-93 LOADING.
2. SUPPLY TYPE V-CV FIBER VAULT WITH A MANHOLE-STYLE LID ONLY.
3. SUPPLY MANHOLE LIDS WITH A HOLE OR SLOT FOR REMOVAL WITH A LEVER OR HOOK. SUPPLY HINGED METAL LIDS WITH DROP HANDLES.
4. SUPPLY VAULTS WITH A PERMANENT INTERNAL LADDER.
5. PROVIDE FIBER VAULT LIDS MARKED, "PARK CITY FIBER OPTIC, FIBER OPTIC, OR SIMILAR" USING MIN 3 INCH HIGH LETTERING WITH 1/8" INCH THICKNESS. FORM LETTERS BY ENGRAVING, CASTING, STAMPING, OR WITH A PRECISE WELD BEAD.
6. PROVIDE HINGED METAL LID WITH A MINIMUM OF 3/23" HIGH DIAMOND PATTERN OR SIMILAR SURFACE.
7. PROVIDE FIBER VAULTS WITH A HEAVY-DUTY NON-METALLIC CABLE STORAGE RACK SYSTEM. PROVIDE RACK ARMS AND STANCHIONS CAPABLE OF SUPPORTING A MINIMUM OF 250 LB FOR TYPE IV-CV FIBER VAULT RACKS, INCLUDE A MINIMUM OF 36 INCH RACK STANCHIONS AND 4 RACK ARMS. FOR TYPE V-CV FIBER VAULTS, INCLUDE A MINIMUM OF 45 INCH RACK STANCHIONS AND 5 RACK ARMS.
8. CONDUITS PENETRATE FIBER VAULT AT THIN WALL SECTIONS ONLY. CORE DRILL HOLE IN THIN WALL SECTION TO CONDUIT SIZE PLUS 1/4". DO NOT "KNOCK OUT" THE THIN WALL SECTION.
9. COMPLY WITH OSHA REQUIREMENTS FOR ENCLOSED WORK SPACES.
10. BOND AND GROUND ALL EXPOSED METALLIC COMPONENTS OF THE FIBER VAULT PER NEC 250 IF ARMORED FIBER OPTIC CABLE IS USED.
11. INSTALL CONDUIT PLUGS ACCORDING TO UDOT STANDARD SPECIFICATION 13553.
12. ALIGN ATMS CONDUIT BY COLOR ON EACH SIDE OF FIBER VAULT.
13. EXTEND GROUND ROD A MINIMUM OF 4 INCHES AND A MAXIMUM OF 6 INCHES ABOVE BOTTOM OF FIBER VAULT.
14. USE GROUND ROD BRIDGE CLAMP FOR BONDING TO GROUND ROD. ATTACH NOT MORE THAN 4 WIRES PER CLAMP.
15. DO NOT CUT GROUND RODS.
16. INSTALL VAULT PLUMB AND LEVEL. GRADE BACKFILL FLUSH WITH VAULT.
17. REFER TO THE FOLLOWING UDOT STANDARD SPECIFICATIONS FOR ADDITIONAL INFORMATION:

ENGINEERING

ATTACHMENT A – 2025 Public Water Field Observation Guidelines

PUBLIC WATER SYSTEM FIELD OBSERVATION GUIDELINES

FOR PROJECTS WITHIN THE PARK CITY WATER SERVICE DISTRICT

YEAR 2025

REV. 2

FORWARD

This manual provides information to assist the field representative in his duties of observing the progress and quality of public water line construction within the Park City Water Service District, Park City, Utah, and determining if the work is proceeding in accordance with *Park City Design Standards, Construction Specifications and Standard Drawings*. The information, checklists and procedures included in the manual are not all inclusive, but are intended to serve as guidelines for the performance of periodic construction observations, required sampling and testing observation by the field representative. **It is important that field representatives contact the Project Manager or the Park City Engineer for clarification if there are any questions related to the requirements of the Park City Design Standards, Construction Specifications, and Standard Drawings.**

DISINFECTING

All new water mains, services, and appurtenances shall be disinfected in accordance with AWWA Standard C651-05.

The method typically employed by the Contractor to disinfect new water distribution systems is to place calcium hypochlorite granules in the pipeline as it is being installed. Reference *Park City Design Standards and Construction Specifications*, Appendix 703A. The field representative should pay special attention to the following items:

- Refer to Table No. 1 of the above referenced Appendix for the number of ounces to be used per pipe diameter and pipe interval to achieve the necessary disinfection concentration.
- **Active chlorine content of disinfecting solution within water service tubing (CTS) for water services shall not exceed 12%.**
- Water mains shall be filled slowly to prevent "pushing" the calcium hypochlorite granules to one end of the pipe line. If the new water lines are to be filled by introducing water from the existing water distribution system, via opening the isolation valve between the two systems, the field representative shall monitor the opening of the valve. The field representative shall pay special attention to the following during water system filling by the Contractor:
  1. Verify that the static water pressure of the distribution system (typically 40 psi) is capable of overcoming the static head required to fill the new water line.
  2. Be certain a means of releasing air at the high point of the water system to be filled is provided and is open.
  3. The isolation valve shall be opened only slightly **(existing water system valves are to be operated only by Water Operations staff)**.
  4. Listen for water passing the valve. The valve shall be closed immediately if it appears that the water pressures begin to equalize on each side of the valve. Backflow of chlorinated water into the existing water distribution system must not occur.
- After the water mains and services have been filled by the Contractor, the field representative shall sample and test the water for chlorine concentration. Observe the following:
  1. Select sampling frequency and locations to achieve representative samples. Typical locations for samples at water meter services, taps or fire hydrants. The sampling frequency will depend on length of the water line being chlorinated, availability of sampling points, and results of chlorination concentration tests.
- The field representative should observe the disinfection of the interior of all pipe, fittings, valves, tapping sleeves, and other materials when existing water mains are cut into or repaired. The Contractor can accomplish this by swabbing the materials with a hypochlorite solution. Reference *Park City Design Standards and Construction Specifications*, Appendix A.
- **Remember: Good disinfection practices improve the opportunity for successful bacteriological test results.**

WATER SYSTEM FLUSHING

Flushing of the installed water system is to be completed in two steps. The initial flushing is to be performed following installation and disinfection of the water main but prior to hydrostatic testing. The final flushing is to be performed following hydrostatic testing and leakage testing.

INITIAL FLUSHING

The following items should be considered by the field representative and may need to be reviewed with the Park City Engineer:

1. When notified that the Contractor intends to begin the initial flushing but before the Contractor utilizes water contact the Park City Water Department to be certain that water is available from the City for flushing purposes. **Inform the Contractor not to begin flushing without authorization (existing water system valves are to be operated only by Water Operations staff).**

2. Review with the Contractor the proposed discharge location for flushing operations and the method by which the Contractor intends to control the discharge of chlorinated water from the water system. **Fire hydrants are not acceptable points for <u>initial</u> flushing operations.**
Typically, Contractors will discharge the water into a water truck or tank and haul the water offsite for disposal. **Chlorinated water shall not be allowed to be discharged in a manner that it could now onto vegetation or into streams, waterways, storm drains or sanitary sewer systems.**

3. Determine the required diameter of opening(s) for discharge from the water line. The opening must be sized to achieve velocities capable of moving dirt and rock through the pipe, approximately **6 to 8 feet per second**. Note that required flowrate and opening size(s) referenced in AWWA Table 3 Required Flow and Openings to Flush Pipelines, is based on only 2.5 feet per second velocity at 40 psi pressure. *Required opening size will be determined based on site specific available water system pressure to achieve the required velocity.*

4. Determine the total volume of water to be expelled from the section of water system being flushed. The entire contents of the water line must be discharged and replaced with new water. To determine the volume required, ensuring that the entire pipe line has been flushed, utilize the following formula:

$V=(\pi d^2/4)(L)(7.481)$; *where:* *V = volume (gallons)*
π/4 = area
d = pipe diameter (feet)
π = 3.141

5. If the section of water line to be flushed is very long, making the transport of sediment and rock to the discharge location may be difficult, an intermediate discharge location for flushing should be considered. *The end of a fire service line, prior to setting the hydrant, or a properly sized service tap could be utilized.*

6. After initial flushing has been completed, perform sampling and testing for "low" chlorination concentration.

FINAL FLUSHING

1. Utilize the same procedure for final flushing as for initial flushing, except that concerns regarding the chlorine concentration of discharge water do not apply.
2. Fire hydrants are to be flushed and can be utilized as flushing locations.
3. Services are to be flushed at the meter vaults. *Proper flushing of the service lines is important since water samples for bacteriological testing are typically taken at the service lines.*

TABLE 3 REQUIRED FLOW AND OPENINGS TO FLUSH PIPELINES (40 psi RESIDUAL PRESSURE IN WATER MAIN)*

Pipe Diameter inches	Flow Required to produce 2.5 ft/s (approx) velocity in main gpm	Size of tap inches 1-1/2 Number of Taps on Pipe# 1	Size of tap inches 1-1/2 Number of Taps on Pipe# 2	Number of 2-1/2 in. Hydrant Outlets*
4	100	1	–	1
6	200	–	1	–	1
8	400	–	2	1	1
10	600	–	3	2	1
12	900	–	–	2	2
16	1600	–	–	4	2

*With a 40 psi pressure in the main with the hydrant flowing to atmosphere, a 2-1/2 inch hydrant outlet will discharge approximately 100-0 gpm and a 4-1/2 inch hydrant outlet will discharge approximately 2500 gpm.

HYDROSTATIC TESTING

Hydrostatic testing is required for every section of water main (valve to valve). Testing every section is intended to test both sides of isolation valves to ensure proper functioning of the valve. Prior to hydrostatic testing and leakage testing the water system should be flushed and tested for proper disinfection.

HYDROSTATIC TESTING

The specified hydrostatic test pressure is to be met at the highest elevation in the section of water line being tested. The specified test pressure shall be achieved by means of a Contractor supplied pump/gauge system connected to the pipe. The gauge shall have sufficient increments to enable accurate readings to be taken.

To achieve proper hydrostatic test pressure at the highest elevation of the water line section being tested, consider the locations available for installing the testing apparatus. To determine the required test pressure at the test gauge, utilize the following formula:

$$P_g = P_r + (H_v - H_g) / 2.31;$$

where: P_g *= required gauge pressure reading (psi)*

P_r *= required test pressure (psi)*

H_v *= elevation at highest valve (feet)*

H_g *= elevation at gauge (psi)*

Note: 1 psi = 2.31 feet of elevation, or 0.43 psi X elevation difference in feet.

The following items should be considered and may need to be reviewed with the Park City Engineer:

- The possibility of requiring/requesting a water valve to be installed in the water main to reduce the pressure difference in the water line to be tested. This may occur when there is a significant difference in elevation between water valves;
- The installation of an additional service tap to accommodate proper testing.
- In achieving the required hydrostatic pressure at the highest elevation of the water line section being tested, the hydrostatic pressures at the lowest elevation may exceed acceptable pressures for the pipe, valves or fittings. Typically, if the calculated pressure at the lowest elevation exceeds 300 psi, the City Engineer should be notified before testing is performed.

HYDROSTATIC TESTING

The field representative shall perform all sampling for bacteriological testing and deliver samples to the Summit County Health Department (or a pre-approved state certified laboratory) for analysis. To achieve consistent and representative sampling, the following procedures shall be observed by the field representative:

- Select the location and number of samples to be taken. Samples are typically taken at water meter services and ends of the water line. Intervals of 200 feet between sampling locations is preferred.
- Procedures for obtaining samples for bacteriological testing of the water system are as follows:
  1. Obtain sample bottles from the Public Works Water Department office or Summit County Health Department, if not available in the office.
  2. When sampling, first disinfect or sterilize the discharge area.
  3. Open the control valve slowly and allow water to flow for a short period.
  4. Close the valve slightly to reduce the flowrate and fill the sample bottle to the fill line. Place the lid on the sample bottle and seal shut. Note: Be sure to identify the location of the sample bottle before obtaining other samples.
- After all samples are taken, complete the identification form and add other pertinent information to each sample bottle. Reference the sample identification form contained in the Report Forms and Checklists section of this manual. *Note: Pay special attention to Item No. 2, "Investigative Sample (not included on official records)" on the identification form.* **Always check this box on the form.**

TABLE 1
ALLOWABLE LEAKAGE PER 1000 FEET OF PIPELINE
(gph)

Avg. Test Pressure (psi)	Nominal Pipe Diameter (inches) 3	4	6	8	10	12	14	16	18
250	.36	.47	.71	.95	1.19	1.42	1.66	1.90	2.14
225	.34	.45	.68	.90	1.13	1.58	1.58	1.80	2.03
220	.32	.43	.64	.85	1.06	1.28	1.48	1.70	1.91
175	.30	.40	.59	.80	.99	1.19	1.39	1.59	1.79
150	.28	.37	.55	.74	.92	1.10	1.29	1.47	1.66
125	.25	.34	.50	.67	.84	1.01	1.18	1.34	1.51
100	.23	.30	.45	.60	.75	.90	1.05	1.20	1.35

*EXCERPTED FROM AWWA C600

in inch-pound units,

$$L = \frac{SD\sqrt{P}}{133{,}200}$$

Where,

L = testing allowance (makeup water), in gallons per hour
S = length of pipe tested, in feet
D = nominal diameter of the pipe, in inches
P = average test pressure during the hydrostatic test, in pounds per square inch (gauge)

This formula is based on a testing allowance of 11.65 gpd/mi/in. of nominal diameter at a pressure of 150 psi.

FIELD OBSERVATION REPORT FORMS AND CHECKLISTS

This section includes typical forms checklists that are to be used as generalized guidelines to assist in the verification of the material and dimensional requirements of the Park City Design Standards and Construction Specifications. Field Representatives are to utilize the checklists during water system construction to assist the Contractor in understanding the requirements of the final product and during the final walk-through to verify consistency with the standards and specifications. Additionally, the fire hydrant inspection forms, illustrating the placement of a fire hydrant in three different terrain conditions, are to be completed during the Final Walk-through to provide the Park City Engineer with information regarding the hydrant's installed elevation and location relative to the curb and gutter and the auxiliary valve.

FIELD OBSERVATION QUICK CHECKLIST

WATER LINE INSTALLATION:

☐ Verify that marking tape and locator wire is installed above the water main in the trench

☐ Verify that water main is bedded with approved gravel-sand material

☐ Verify that water main is installed at proper horizontal location (within pavement and inside of curb & gutter limits) and depth. Require additional survey staking be provided if necessary to determine design grades and curb & gutter alignment

☐ Verify that correct polyethylene encasement is provided and properly installed

☐ Verify that wax tape coating system is provided and properly installed on all buried bolts & nuts. Verify the cathodic protection system (if required) is provided and properly installed.

☐ Verify that thrust blocking is of adequate size, extended to undisturbed soil and that the pipe is wrapped with polyethylene before concrete is placed

☐ Verify that service taps are at 45 degrees to the main with 2 feet minimum separation

☐ Verify that every service corporation stop is open. This can be verified during flushing procedures

☐ Verify that water valves are properly set, valve boxes are clear of debris, and that a valve key can be placed on the valve. This must be verified during the final walk-through

FIELD OBSERVATION QUICK CHECKLIST

FIRE HYDRANT INSTALLATION:

☐ Verify that adequate gravel is placed around the fire hydrant base

☐ Verify that thrust blocking is properly placed and fire hydrant drain ports are not covered by concrete.

☐ Flush fire hydrant drain ports. Close main hydrant valve to the position at which the drains open and allow flow through the drains under pressure for about ten seconds to flush the drains. Then close hydrant valve completely.

☐ Check fire hydrant barrels for drainage. Remove nozzle cap, open hydrant valve, allow hydrant to run briefly and close hydrant valve. Place palm of hand over nozzle outlet. Drainage should be sufficient to create a suction.

☐ Check fire hydrant nozzle caps for thread damage from impact or cross threading

☐ Verify that the auxiliary valve is in the wide open position.

☐ Verify that fire hydrant markers are installed

☐ Verify that fire hydrant is properly extended above grade and hydrant pad is properly constructed. See *Fire Hydrant Inspection Sheet.*

FIELD OBSERVATION QUICK CHECKLIST

WATER METER INSTALLATION:

☐ Verify that meter service assembly materials are in accordance with Checklist. *See checklists for specific* size *water meter.*

☐ Verify that water meter box is adjusted to grade. *See meter box adjustment detail sheet.*

☐ Verify that water meter box is located properly. Require additional staking as required for verification.

TYPICAL PROCESS FOR WATER SYSTEM CONSTRUCTION

1. INSTALL WATER MAIN AND FIRE HYDRANTS

2. INSTALL WATER SERVICES

3. INITIAL FLUSHING OF WATER MAIN

4. INITIAL FLUSHING OF WATER SERVICES

5. PERFORM HYDROSTATIC AND LEAKAGE TESTING ON WATER MAIN

6. PERFORM HYDROSTATIC AND LEAKAGE TESTING ON FIRE HYDRANTS & WATER SERVICES

7. FINAL FLUSHING OF WATER MAIN

8. FINAL FLUSHING OF FIRE HYDRANTS & WATER SERVICES

9. PERFORM BACTERIOLOGICAL TESTING

10. ALLOW ACTIVATION OF WATER SYSTEM

If the Contractor elects to perform hydrostatic testing of water services independently of the water main, Items 3, 5, 7 and 9 will be performed on the water main prior to installation of the water services.

If water services are installed after water main testing, the each services must be disinfected separately.

Sampling and testing for "high" chlorine concentration is performed prior to initial flushing.

Sampling and testing for "low" chlorine concentration is performed following final flushing.

Permanent opening of isolation valves upon receipt of successful bacteriological test results.

ATTACHMENT B – Old Town Stairway Construction Details & Plans

A guide to "Old Town Stairway" Construction

By Chase Bowler

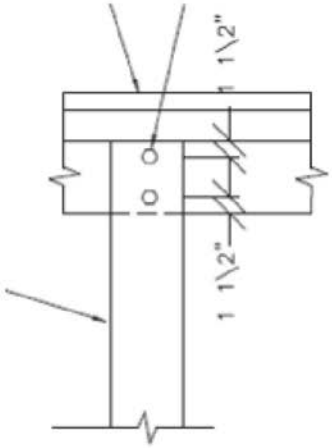
PARK CITY 1884	DATE	OLD TOWN STAIRWAY	STD. PLAN
	3/2020		881-A
	REV.		

PARK CITY 1884	DATE	OLD TOWN STAIRWAY	STD. PLAN
	3/2020		881-B
	REV.		

Connections and Parts

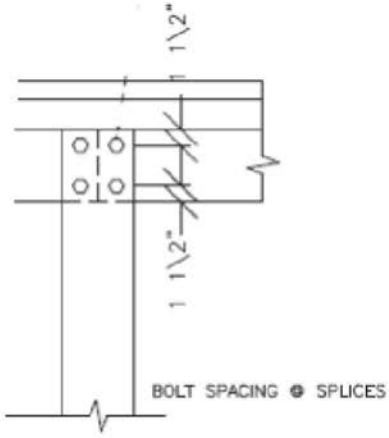
A)

Note that all connections are carriage bolts, having the smooth side inward, and the threads on the outside with washer and nut.



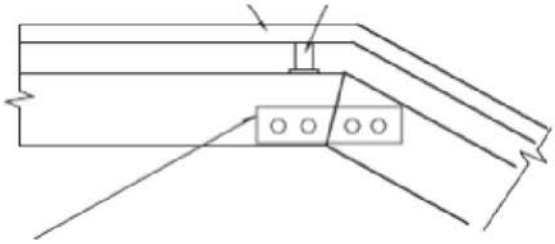
B)

Two bolts are recommended for upright and handrail connections. And when there is a splice in the wooden handrail support structure, than four bolts shall be used.



C)

Any change in angle should be connected with angle steel and appropriate carriage bolt washer and nut combination.

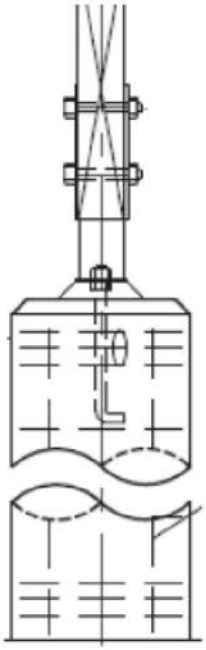


PARK CITY 1884	DATE	OLD TOWN STAIRWAY	STD. PLAN
	3/2020		881-C
	REV.		

Uprights

A)

All supports must be founded in a concrete poured base 12" in diameter, and connected using four galvanized steel bolts.



Railing

B)

According to code all terminations of handrails must curve back around and connect into the wood end.

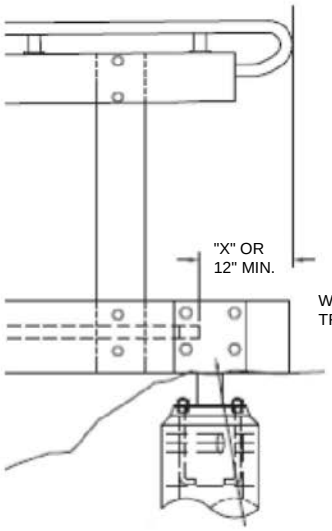
IBC 1012.6 ***Handrail Extensions*** *"Handrails... shall be continuous to the handrail of an adjacent stair flight or ramp run."*

And "...handrails shall extended horizontally at least 12in beyond the top riser and continue to slope for the depth one tread beyond the bottom riser."

	DATE		STD. PLAN
PARK CITY 1884	3/2020	OLD TOWN STAIRWAY	881-D
	REV.		

IBC 1012.3.1 ***Handrail Graspability*** *"Handrails with circular cross section shall have an outside diameter of at least 1 ¼ in and no greater than 2 in."*

IBC 1012.5 ***Fittings*** *"Hand rails shall not rotate within their fittings."*



Landings

IBC 1009.8 ***Stairway Landings*** *"There shall be a floor or landing at the top and bottom of each stairway. The width of landings shall not be less than the width of stairways they serve.*

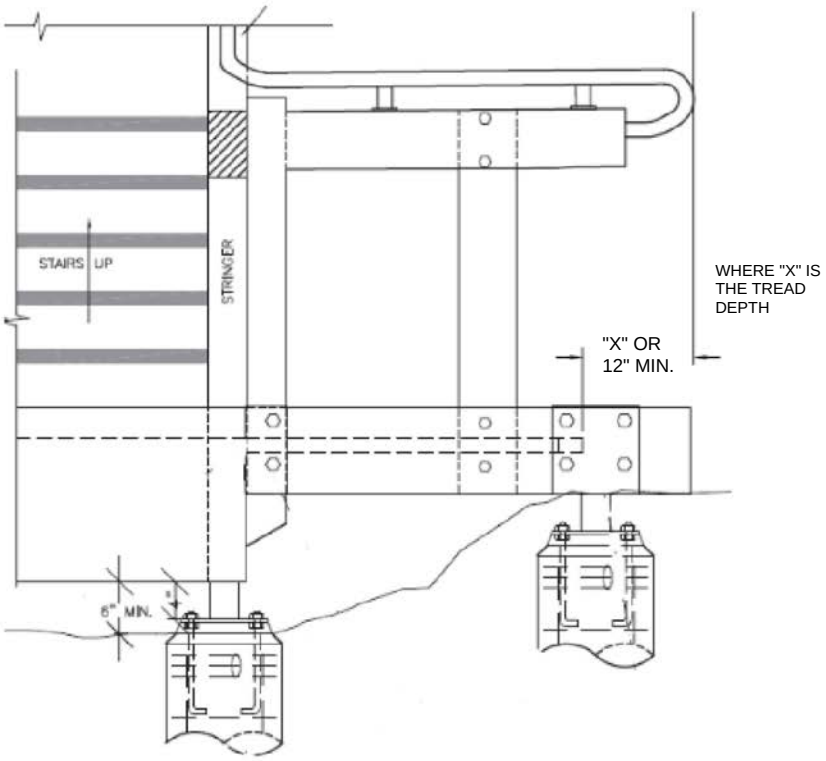
	DATE		STD. PLAN
PARK CITY 1884	3/2020	OLD TOWN STAIRWAY	881-E
	REV.		

IBC 1009.9.2 ***Outdoor Conditions*** *"Outdoor stairways and outdoor approaches to stairways shall be designed so that water will not accumulate on walking surfaces."*

	DATE		STD. PLAN
PARK CITY 1884	3/2020	OLD TOWN STAIRWAY	881-F
	REV.		

IBC 1009.10 ***Vertical Rise*** *"A flight of stairs shall not have a vertical rise greater than 12 feet between floor levels of landings.*

IBC 1009.4 ***Width*** *"...width of stairways shall not be less than 44 in." unless "...occupant load of less than 50 shall have a width of no less than 36 in."*



PARK CITY 1884	DATE	OLD TOWN STAIRWAY	STD. PLAN
	3/2020		881-G
	REV.		

A)

All endings of stair landings must be connected with steel plaiting and carriage bolts to make for firm connections.

Landing connections

	DATE		STD. PLAN
PARK CITY 1884	3/2020	OLD TOWN STAIRWAY	881-H
	REV.		

A)

It is recommended that the front of the steps be covered with 1.5 in. thick wood, to maintain consistency with the other stairs throughout the city.

IBC 1009.7.2 ***Riser Height and Tread depth*** *"Stair riser heights shall be 7 in. maximum and 4 in. minimum. ,...rectangular tread depths shall be 11 in minimum..."*

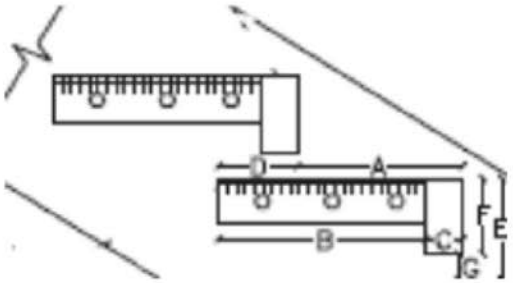
IBC 1009.7.5 ***Nosing and Riser Profile*** *"The radius of curvature at the edge of the tread shall be no greater than 9/16 in."*

IBC 1009.7.5.2 ***Nosing Projection Uniformity*** *"All nosing projections of the leading edges shall be of uniform size, including the projections of the nosing leading edge of the floor at the top of a flight."*

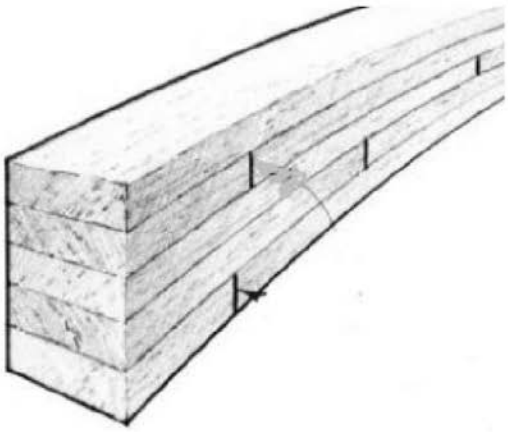
B)

All wood used on the stairs must be of a composite form. This also allows for greater resistance to warping due to weathering, and having an enhanced strength.

Steps



Composite Wood



PARK CITY 1884	DATE	OLD TOWN STAIRWAY	STD. PLAN
	3/2020		881-I
	REV.		

Code Requirements and Preferences

A)

According to City preferences, on any landings or steps they must have a tread made of Diamond Grip Channel material.

ANSI 302.3 ***Openings*** *"Openings in the floor surface be of a size that does not permit the passage of a ½ inch diameter sphere... Elongated openings shall be placed so that the long dimension is perpendicular to the d0ominent direction of travel."*

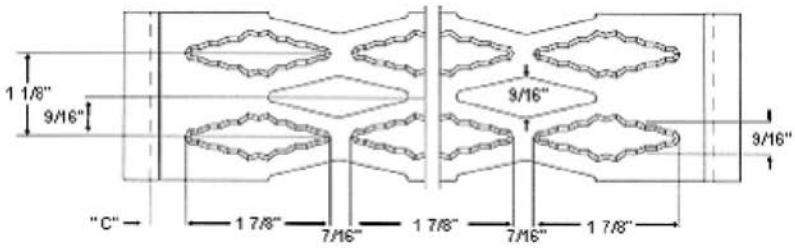
IBC 1009..9.1 ***Stairway Walking surface*** *"The walking surface of treads and landings of a stairway shall not be sloped steeper than one unit vertical in 48 units horizontal in any direction. Stairway treads and landings shall have a solid surface."*

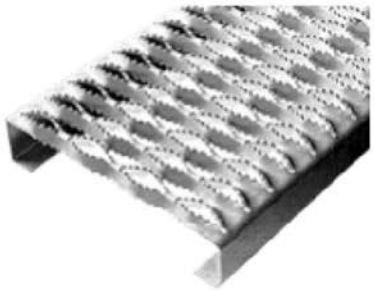
B)

It is strongly suggested that all connections excluding those found tying foundations into posts, are to be made using a carriage bolt combination, where the rounded portion of the bolt is to be consistently on the inside out of the stairs or in the path of travel.

C)

No countersinks are permitted when connecting any system, because the strength of the connection is reduced and a reduction in the life of the stairs.





Discouraging Approach

PARK CITY 1884	DATE	OLD TOWN STAIRWAY	STD. PLAN
	3/2020		881-J
	REV.
