| ☐ Fair (Some problems are apparent. Describe the problems.): |
|---|
| ☐ Poor (Major problems are apparent and constitute an imminent threat. Describe the problems.): |
| □ Uninhabitable/Ruin |
| Materials (The physical elements that were combined or deposited during a particular period of time in a particular pattern or configuration. Describe the materials.): Site: The site—primarily the side yards and rear yard—were substantially altered when a large addition was constructed in 1997. The front yard has been altered to accommodate a garage under the living area, but the site was not substantially altered. |
| Foundation: Concrete |
| Walls: Wood siding |
| Roof: The roof form has been significantly altered. Asphalt shingle |
| Windows/Doors: Wood, double-hung and other typical of window forms used historically in Old Town. |
| Essential Historical Form: ☑ Retains ☐ Does Not Retain, due to: |
| Location: ☑ Original Location ☐ Moved (date) Original Location: |
| Design (The combination of physical elements that create the form, plan, space, structure, and style. Describe additions and/or alterations from the original design, including datesknown or estimatedwhen alterations were made): The structure was originally constructed |

from the original design, including dates--known or estimated--when alterations were made): The structure was originally constructed as a typical T/L cottage. In the 1984 National Register of Historic Places, the State Historic Preservation Office describes the structure as follows:

"This house is a one story frame T/L cottage with a gable roof. A porch spans the east side of the stem-wing. The porch has simple, slender square porch piers and a straight post balustrade. A pair of one over one

"This house is a one story frame T/L cottage with a gable roof. A porch spans the east side of the stem-wing. The porch has simple, slender square porch piers and a straight post balustrade. A pair of one over one double hung sash windows is set into the gable end of the cross-wing. There is a door and a window on the stem wing. A second door, set into the south side of the cross-wing, was partially enclosed, and replaced by a window. A small horizontal rectangular window on the south side of the building is not original, but is an unobtrusive change, and was made within the historic period. There is a shed roof rear extension, which is not original, as is indicated by the difference in siding types and the break in the roofline. The extension has narrow lap siding, a type of siding that gained popularity in the 1920s, whereas the main section has drop siding, the principle type of siding that was used for all of Park City's houses dating from the 1870's until at least the first decade of the twentieth century. The extension, however, dates within the historic period and is not obtrusive. In-period rear extensions are part of Park City's architectural vocabulary. Although in many cases an extension represents a major alteration of the original house, it usually contributes to the significance of a house because it documents the most common and acceptable method of expansion of the small Park City house. The minor changes made to this house do not affect its original character."

Photographs from 1995 indicate alterations and improvements to the site, including a garage under the gable wing living space. Photographs from 2006, indicate far greater modifications to the structure; specifically, a second story was added and the T/L building form was altered. According to the property owner, the roof was structurally unsound and was modified from T/L to front gable as a result of the structural deficiencies and to accommodate additional living space. From the planning staff findings of fact from application #10-01096:

"In 1997, the stem wing section of the main roof was modified to create a new front facing gable and additional space in the top story. The "pitch" of the original gable end of the cross-wing has not been altered. Also, the shed roof above the porch has not been altered. Although the roof form has been modified, it is evident that the structure was originally a cross-wing T shaped cottage when viewed from the public right-of-way. The existing structure retains its essential historical form."

Setting (The physical environment--natural or manmade--of a historic site. Describe the setting and how it has changed over time.): The setting in relation to the primary façade and site frontage has been altered, but not substantially. The side yards and rear yard have been significantly altered.

Workmanship (The physical evidence of the crafts of a particular culture or people during a given period in history. Describe the distinctive elements.): Much of the physical evidence from the period that defines the typical Park City mining era home has been lost. The only general elements that remain are the front portion of the gable wing, the porch of the stem wing, and perhaps a portion of the front façade of the stem wing.

Feeling (Describe the property's historic character.): The physical elements of the site, in combination, do not effectively convey a sense of life in a western mining town of the late nineteenth and early twentieth centuries.

Association (Describe the link between the important historic era or person and the property.): The T/L house is one of the three most common house types built in Park City during the mining era; however, the extent of the alterations to the main building diminishes its association with the past.

The building was listed on the National Register of Historic Places in 1984 based on the condition of the building at the time of listing. The structure was modified prior to 1995 and again prior to 2006. The extent and cumulative effect of the alterations to the site render it ineligible for listing on the National Register, which means the site does not meet the criteria for designation as a Landmark Site according to criteria set forth in LMC Title 15-11. The site, however, retains its essential historical form and meets the criteria for designation as a Significant Site.

| | | |

Park City was the center of one of the top three metal mining districts in the state during Utah's mining boom period of the late nineteenth and early twentieth centuries, and it is one of only two major metal mining communities that have survived to the present. Park City's houses are the largest and best-preserved group of residential buildings in a metal mining town in Utah. As such, they provide the most complete documentation of the residential character of mining towns of that period, including their settlement patterns, building materials, construction techniques, and socio-economic make-up. The residences also represent the state's largest collection of nineteenth and early twentieth century frame houses. They contribute to our understanding of a significant aspect of Park City's economic growth and architectural development as a mining community.²

- 2. Persons (Describe how the site is associated with the lives of persons who were of historic importance to the community or those who were significant in the history of the state, region, or nation):
- 3. Architecture (Describe how the site exemplifies noteworthy methods of construction, materials or craftsmanship used during the historic period or is the work of a master craftsman or notable architect):

Building Type/Style:

T/L Cottage

Description of physical appearance & significant architectural features: (Include additions, alterations, ancillary structures, and landscaping if applicable)

This house is a one story frame T/L cottage with a gable roof. A porch spans the east side of the stem-wing. The porch has simple, slender square porch piers and a straight post balustrade. A pair of one over one double hung sash windows is set into the gable end of the cross-wing. There is a door and a window on the stem-wing. A second door, set into the south side of the cross-wing, was partially enclosed, and replaced by a window. A small horizontal rectangular window on the south side of the building is not original, but is an unobtrusive change, and was made within the historic period. There is a shed roof rear extension which is not original, as is indicated by the difference in siding types and the break in the roof line. The extension has narrow lap siding, a type of siding that gained popularity in the 1920s, whereas the main section has drop siding, the principle type of siding that was used for all of Park City's houses dating from the 1870's until at least the first decade of the twentieth century. The extension, however, dates within the historic period and is not obtrusive. rear extensions are part of Park City's architectural vocabulary. Although in many cases an extension represents a major alteration of the original house, it usually contributes to the significance of a house because it documents the most common and acceptable method of expansion of the small Park City house. The minor changes made to this house do not affect its original character.

Statement of Historical Significance:

Construction Date: c. 1889

Site No:

Built c. 1889, the Jesse Morgan House at 1027 Woodside is architecturally significant as one of 78 extant T/L cottages in Park City, 17 of which are included in this nomination. The T/L cottage is one of the three most common house types built during the early period of Park City's mining boom era, and significantly contributes to the character of the residential area.

This house was built between 1889 and 1900, as indicated by the Sanborn Insurance Maps, having apparently been either built or moved on to this property in 1889 for Jesse Morgan. Morgan purchased this property in May of 1889 and the legal transaction describes the property as "One frame or plank building formerly known as the Burns House now containing four rooms standing on the W'ly side of Wooside Ave.... The premises are now occupied by A.F. Martin of Park City." None of the previous owners of this property were named Burns, and, since the house does not show up at this location on the 1889 Sanborn Insurance Map, it is likely that the Burns House was moved on to this property when Morgan purchased it. It is also possible that this house was built later in the 1890s, replacing the Burns House. There is no evidence to support that assumption, however.

Jesse Morgan was a miner who had come to the U.S. in 1861 from England, where he had been born in 1845. Although he owned this house until 1902, the 1900 census records show him living in a rented house on Norfolk with his mining partner, James Mazlin. Nellie J. Morgan, either his daughter or his wife (he was married c. 1872), received title to the property in 1902, but in 1904 sold it to Grace J. Bryant. Bryant sold it in 1906 to Emma and Harry W. Wilson, who owned it until 1968.
