	elements.): The physical evidence from the period that defines this as a typical Park City mining era commercial building are the simple methods of construction, the use of brick and concrete, the recessed entrance and display					

Feeling (Describe the property's historic character.): The physical elements of the site, in combination, convey a sense of the commercial activity in a western mining town of the late nineteenth and early twentieth centuries.

Association (Describe the link between the important historic era or person and the property.): The two-part block is one of the most common commercial building types constructed in Park City during the mining era.

This site was listed on the National Register of Historic Places in 1979 as part of the *Park City Main Street Historic District*. It was built within the historic period (1868-1929), is associated with the mining era, and retains its historic integrity. As a result, it meets the criteria set forth in LMC Chapter 15-11 for designation as a Landmark Site.

5 SIGNIFICANCE

Architect: ☑ Not Known ☐ Kn	own: (source:)	Date of Construction: c. 1926 ¹		
Builder: ☑ Not Known ☐ Know	wn: (source:)			
The site must represent an important part of the history or architecture of the community. A site need only be significant under one of the three areas listed below:				
 Historic Era: ☐ Settlement & Mining Boom ☑ Mature Mining Era (1894-1 ☐ Mining Decline & Emergen 	,	1-1962)		
Park City was the center	of one of the top three metal r	nining districts in the state during Utah's mining		

boom period of the late nineteenth and early twentieth centuries, and it is one of only two major metal mining communities that have survived to the present. Park City's commercial buildings represent the best remaining metal mining town business district in the state. The buildings along Main Street, in particular, provide important documentation of the commercial character of mining towns of that period, including the range of building materials, building types, and architectural styles. They contribute to our understanding of a significant aspect of Park City's economic growth and architectural development as a mining business district².

- 2. Persons (Describe how the site is associated with the lives of persons who were of historic importance to the community or those who were significant in the history of the state, region, or nation):
- 3. Architecture (Describe how the site exemplifies noteworthy methods of construction, materials or craftsmanship used during the historic period or is the work of a master craftsman or notable architect):
